Goals and Strategies

We are striving for lasting success in tomorrow’s world of mobility and intend to be one of the world’s leading providers of sustainable mobility. This is the reason we have anchored the future program TOGETHER – Strategy 2025 in the Group.

With the future program TOGETHER – Strategy 2025 announced in 2016, we aim to make the Volkswagen Group more focused, efficient, innovative, customer-oriented and sustainable, and systematically geared towards generating profitable growth. The program creates the framework and lays the cornerstones for us to achieve our vision of being one of the world’s leading providers of sustainable mobility.

The time horizon until 2025 shows that our thoughts and actions are long-term and future-oriented. The term TOGETHER describes the mindset that will be even more vital to the Volkswagen Group’s long-term success going forward. Our intention with the new Group strategy is for everyone in the Volkswagen Group to join us in producing exciting vehicles and forward-looking, tailor-made mobility solutions that will continue to inspire our customers, meeting their diverse needs with a portfolio of strong brands. Every day, we actively assume and exercise responsibility in relation to the environment, safety and society, and we wish to be a role model in these areas. Integrity, reliability, quality and passion thus form the basis for our work. In this way, we will aim for technological leadership in the industry, ensure our competitive profitability and remain an excellent, reliable and secure employer at the same time.

The Code of Collaboration formulated as part of the future program is the foundation on which the Group strategy rests. This Code describes how collaboration is to take place within the Group and between individuals in their day-to-day work. Its core values are encapsulated in the terms “genuine”, “straightforward”, “open-minded”, “as equals” and “united”. 
FOUR BUILDING BLOCKS OF THE FUTURE PROGRAM TOGETHER – STRATEGY 2025

Our Group strategy comprises a raft of far-reaching strategic decisions and specific initiatives aimed at safeguarding the long-term future and generating profitable growth. It is composed of four building blocks which cover strategic Group initiatives. We regularly review the progress of these initiatives so as to analyze the significance, suitability and target achievement of the measures defined. We are thus able to adjust the Group initiatives specifically according to the dynamic changes occurring within our Company.

The first of these is the transformation of the core automotive business. Developing, building and selling vehicles will remain essential for the Volkswagen Group going forward. However, there will be far-reaching and lasting changes to this business in the future. That is the reason why we are comprehensively restructuring our core business to face this new era of mobility.

The second key building block in our Group strategy is establishing a new mobility solutions business. In this business, we are developing innovative and efficient, attractive yet profitable mobility services that are tailored to customer requirements with the goal of being one of the leading providers in this growth market in the future.

With the third key building block, we are intensifying our traditionally excellent innovative strength and placing it on an even broader footing. This is necessary both for the transformation of our core business and for the establishment of the new mobility solutions business. To this end, we are pushing ahead with the digital transformation in all parts of the Company.

Becoming one of the world’s leading providers of sustainable mobility calls for substantial capital expenditure. This will be financed in particular through efficiency gains along the entire value chain – from product development and procurement through to production and distribution as well as in the central supporting areas. Additional funds for future investments can also be generated by optimizing the existing portfolio of brands and equity investments. Through the fourth key building block of the Group strategy we will safeguard the financing of the Volkswagen Group and place it on a solid basis.

GOALS AND KEY PERFORMANCE INDICATORS OF THE GROUP’S STRATEGY

The strategic initiatives describe how we intend to achieve our vision of being one of the world’s leading providers of sustainable mobility. For this purpose, we have defined four target dimensions – excited customers, excellent employer, role model for the environment, safety and integrity, and competitive profitability – which are designed to help us grow sustainably.

Although these target dimensions apply throughout the Group, the strategic KPIs that we will use in the future to measure how well we have implemented our Group strategy, depend on the respective business model. After all, the busi-

ness model for our passenger car-producing brands is different from that for trucks and buses and also from that of our Power Engineering Business Area and our services business.

In the following, we describe the Group’s strategic goals attached to these target dimensions.

The strategic KPIs of the competitive profitability target dimension have been defined and anchored uniformly in the Group. As the new Group strategy has yet to be specified in detail, the content of some strategic KPIs in the other target dimensions is still being determined. The relevance of the KPIs is reviewed at Group level and their focus continuously monitored and adjusted as necessary. We report on the defined nonfinancial strategic KPIs in the “Corporate Governance Report” and “Sustainable Value Enhancement” sections.

**Target dimension: excited customers**
This target dimension focuses on the diverse needs of our customers and on tailor-made mobility solutions. We aspire to exceed our customers’ expectations, generating maximum benefit for them. That calls not only for the best products, the most efficient solutions and the best service, but also for flawless quality and an outstanding image. We want to excite our existing customers, win over new ones and retain their loyalty in the long term – because only loyal and faithful customers will recommend us to others.

The strategic KPIs consist of the conquest rate and KPIs pertaining to loyalty, customer satisfaction and quality.

**Target dimension: excellent employer**
Skilled and dedicated employees are one of the keys to sustainable success. We wish to promote their satisfaction and motivation by means of equal opportunities, an attractive and modern working environment, and a forward-looking organization of work. Exemplary leadership and corporate culture forms the foundation for this, enabling us to retain our core workforce and attract new talent.

The strategic KPIs of this target dimension cover internal employer attractiveness determined by means of the opinion survey, external employer attractiveness, an external employer ranking as well as a KPI pertaining to cross-brand exchange and rotation and the diversity index.

**Target dimension: role model for environment, safety and integrity**
Every day, we at the Volkswagen Group assume and exercise responsibility in relation to the environment, safety and society. This is reflected in our thoughts and actions and in all our decisions in equal measure.

We pay particular attention to the use of resources and the emissions of our product portfolio as well as those of our sites and plants, with the goal of continuously improving our carbon footprint and lowering pollutant emissions. Through innovations and outstanding quality, we aim for maximum product safety.

The most important principles in this process include compliance with laws and regulations, the establishment of secure processes, and dealing openly with mistakes so that they can be avoided or rectified in the future. In terms of integrity, Volkswagen aims to become a role model for a modern, transparent and successful enterprise.

The strategic KPIs of this target dimension include the decarbonization index and KPIs pertaining to emissions figures, compliance, a culture of dealing openly with mistakes, and integrity.

**Target dimension: competitive profitability**
Investors judge us by whether we are able to meet our obligations as regards interest payments and debt repayments. As equity holders, they expect appropriate dividends and a long-term increase in the value of their shares.

We make investments with a view to achieving profitable growth and strengthening our competitiveness, thus keeping the Volkswagen Group on a firm footing and ensuring it remains an attractive investment option.

The goals we have set ourselves are operational excellence in all business processes and becoming the benchmark for the entire industry.

The strategic KPIs are operationalized for internal management purposes: target and actual data are derived from Volkswagen Group figures.

**STRATEGIC KPIs: COMPETITIVE PROFITABILITY**

Internal Management System and Key Performance Indicators

This chapter describes, on the basis of the Group strategy, how the Volkswagen Group is managed and the key performance indicators used for this purpose. In addition to financial measures, our management system also contains nonfinancial key performance indicators.

The Volkswagen Group’s performance and success can be measured by both financial and nonfinancial key performance indicators. With the Operational Excellence Group initiative, we aim to improve these indicators throughout all areas and along the entire value chain.

In the following, we first describe the internal management process and then explain the Volkswagen Group’s core performance indicators.

**INTERNAL MANAGEMENT PROCESS IN THE VOLKSWAGEN GROUP**

The Integrate Strategy and Planning Process Group initiative is focused on continuity and even closer dovetailing of the Group and brand strategies with the operational planning process. This enhances transparency when it comes to the financial assessment and the evaluation of directional decisions. The operational medium-term planning that is conducted once a year and generally covers a period of five years is incorporated into the strategic planning as a key management element of the Group.

Medium-term planning forms the core of our operational planning and is used to formulate and safeguard the requirements for realizing strategic projects designed to meet Group targets in both technical and economic terms – and particularly in relation to earnings, cash flow and liquidity effects. In addition, it is used to coordinate all business areas with respect to the strategic action areas concerned: functions/processes, products and markets.

When planning the Company’s future, the individual planning components are determined on the basis of the time-scale involved:

- the long-term unit sales plan, which sets out market and segment growth and then derives the Volkswagen Group’s delivery volumes from them,
- the product program as the strategic, long-term factor determining corporate policy,
- capacity and utilization planning for the individual sites.

The coordinated results of the upstream planning processes are used as the basis for the medium-term financial planning: the Group’s financial planning, including the brands and business fields, comprises the income statement, cash flow and balance sheet planning, profitability and liquidity, as well as the upfront investments needed for alternative products and the implementation of strategic options. The first year of the medium-term planning period is fixed and a budget drawn up for the individual months. This is planned in detail down to the level of the operating cost centers.

The budget is reviewed each month throughout the year to establish the target achievement level. Key internal management instruments comprise target/actual comparisons, prior-year comparisons, variance analyses and, where necessary, action plans to ensure targets are met. For the current fiscal year, detailed revolving monthly forecasts are prepared for the coming three months and the full year, taking into account the current risks and opportunities. The focus of intrayear internal management is therefore on adapting ongoing operations. At the same time, the current forecast serves as a potential, ongoing corrective to the medium-term and budget planning that follows on from it.
Internal Management System and Key Performance Indicators

The Volkswagen Group's internal management system is based on nine core performance indicators, which are derived from our strategic goals:

- Deliveries to customers
- Sales revenue
- Operating result
- Operating return on sales
- Research and development ratio (R&D ratio) in the Automotive Division
- Capex/sales revenue in the Automotive Division
- Net cash flow in the Automotive Division
- Net liquidity in the Automotive Division
- Return on investment (ROI) in the Automotive Division

Deliveries to customers are defined as handovers of new vehicles to the end customer. This figure shows the popularity of our products and is the measure we use to determine our competitive position in the various markets. Deliveries are closely related to our targets of exciting our customers, being a role model in terms of the environment, safety and integrity, and being an excellent employer. One of the most important prerequisites for the Company's long-term success is a strong brand portfolio that – on the basis of outstanding quality – offers tailor-made mobility solutions with safe, resource-efficient vehicles, thus meeting the diverse needs of customers. Demand for our products guarantees not only unit sales and production, but also full utilization of our sites and the jobs of our employees. The goals we are striving for cannot be achieved without a skilled, dedicated workforce and a consensus on shared values.

Sales revenue, which does not include the figures for our equity-accounted Chinese joint ventures, reflects our market success in financial terms. Following adjustment for our use of resources, the operating result reflects the Company's actual business activity and documents the economic success of our core business. The operating return on sales is the ratio of the operating result to sales revenue.

The research and development ratio (R&D ratio) in the Automotive Division shows total research and development costs in relation to sales revenue. Research and development costs comprise a range of expenses, from futurology through to the development of marketable products. Particular emphasis is placed on the environmentally friendly orientation of our product portfolio, digitalization and new technologies. The R&D ratio underscores the efforts made to ensure the Company’s future viability: the goal of competitive profitability geared to sustainable growth.

The ratio of capex (investments in property, plant and equipment, investment property and intangible assets, excluding capitalized development costs) to sales revenue in the Automotive Division reflects both our innovative power and our future competitiveness. It shows our capital expenditure – largely for modernizing, expanding and digitalizing our product range and for environmentally friendly drivetrains, as well as for adjusting production capacities and improving production processes – in relation to the Automotive Division’s sales revenue.

Net cash flow in the Automotive Division represents the excess funds from operating activities available for dividend payments, for example. It is calculated as cash flows from operating activities less cash flows from investing activities attributable to operating activities.

Net liquidity in the Automotive Division is the total of cash, cash equivalents, securities, loans and time deposits not financed by third-party borrowings. To safeguard our business activities, we have formulated the strategic target that net liquidity in the Automotive Division should amount to approximately 10% of the consolidated sales revenue.

We use the return on investment (ROI) to calculate the return on invested capital for a particular period in the Automotive Division, including the Chinese joint ventures on a proportionate basis, by calculating the ratio of the operating result after tax to average invested capital. If the return on investment (ROI) exceeds the market cost of capital, the value of the Company has increased. This is how we measure the financial success of our brands, locations and vehicle projects.

You can find information on and explanations of the sales figures and the Volkswagen Group’s financial key performance indicators on pages 101 to 107 and on pages 114 to 128, respectively.

Detailed descriptions of our activities and additional nonfinancial key performance indicators in the areas of sustainability, research and development, procurement, production, sales and marketing, quality assurance, employees, information technology and the environment can be found in the chapter entitled “Sustainable Value Enhancement” beginning on page 133 of this annual report. Nonfinancial key performance indicators related to compliance are described in the “Corporate Governance Report” on page 65.
Structure and Business Activities

This chapter describes the legal and organizational structure of the Volkswagen Group and explains the material changes in 2018 with respect to equity investments.

OUTLINE OF THE LEGAL STRUCTURE OF THE GROUP
Volkswagen AG is the parent company of the Volkswagen Group. It develops vehicles and components for the Group’s brands, but also produces and sells vehicles, in particular passenger cars and light commercial vehicles for the Volkswagen Passenger Cars and Volkswagen Commercial Vehicles brands. In its capacity as parent company, Volkswagen AG holds indirect or direct interests in AUDI AG, SEAT S.A., ŠKODA AUTO a.s., Dr. Ing. h.c. F. Porsche AG, Scania AB, MAN SE, Volkswagen Financial Services AG, Volkswagen Bank GmbH and a large number of other companies in Germany and abroad. More detailed disclosures are contained in the list of shareholdings in accordance with sections 285 and 313 of the Handelsgesetzbuch (HGB – German Commercial Code), which can be accessed at www.volkswagenag.com/en/InvestorRelations.html and is part of the annual financial statements.

Volkswagen AG is a vertically integrated energy supply company as defined by section 3 no. 38 of the Energiewirtschaftsgesetz (EnWG – German Energy Industry Act) and is therefore subject to the provisions of the EnWG. In the electricity sector, Volkswagen AG generates, sells and distributes electricity together with a Group subsidiary.

Volkswagen AG’s Board of Management is the ultimate body responsible for managing the Group. The Supervisory Board appoints, monitors and advises the Board of Management; it is consulted directly on decisions that are of fundamental significance for the Company.

ORGANIZATIONAL STRUCTURE OF THE GROUP
The Volkswagen Group is one of the leading multibrand groups in the automotive industry. The Company’s business activities comprise the Automotive and Financial Services divisions. All brands within the Automotive Division – with the exception of the Volkswagen Passenger Cars and Volkswagen Commercial Vehicles brands – are independent legal entities.

The Automotive Division comprises the Passenger Cars, Commercial Vehicles and Power Engineering business areas. The Passenger Cars Business Area essentially consolidates the Volkswagen Group’s passenger car brands. Activities focus on the development of vehicles and engines, the production and sale of passenger cars, and the genuine parts business. The product portfolio ranges from fuel-efficient compact cars to luxury vehicles and also includes motorcycles, and will gradually be supplemented by mobility solutions.

The Commercial Vehicles Business Area primarily comprises the development, production and sale of light commercial vehicles, trucks and buses from the Volkswagen Commercial Vehicles, Scania and MAN brands, the corresponding genuine parts business and related services. The collaboration between the MAN and Scania commercial vehicle brands is coordinated within the TRATON GROUP. The commercial vehicles portfolio ranges from pickups to heavy trucks and buses.

The Power Engineering Business Area combines the large-bore diesel engines, turbomachinery, special gear units, propulsion components and testing systems businesses.

The activities of the Financial Services Division comprise dealer and customer financing, vehicle leasing, direct banking and insurance activities, as well as fleet management and mobility offerings.

With its brands, the Volkswagen Group is present in all relevant markets around the world. The Group’s key sales markets currently include Western Europe, China, the USA, Brazil, Russia and Mexico.

Volkswagen AG and the Volkswagen Group are managed by the Volkswagen AG Board of Management in accordance with the Volkswagen AG Articles of Association and the rules of procedure for Volkswagen AG’s Board of Management issued by the Supervisory Board.
To further enhance its leadership and management model, the Volkswagen Group introduced an additional internal operational structure in spring 2018. Volkswagen is convinced that this will allow better use of existing competences and economies of scale, make it possible to leverage synergies more systematically and accelerate decision making.

In addition to the Finance & IT, Human Resources and Integrity and Legal Affairs divisions, the Volkswagen Group collaborates across six operating units and the China region, these being the “Volume”, “Premium”, “Sport & Luxury”, “Truck & Bus” brand groups, as well as the Components & Procurement and Financial Services operating units. The “Volume” brand group comprises the Volkswagen Passenger Cars, SEAT, SKODA and Volkswagen Commercial Vehicles brands. The Audi, Lamborghini and Ducati brands are brought together in the “Premium” brand group. “Sport & Luxury” is comprised of the Porsche, Bentley and Bugatti brands. The “Truck & Bus” brand group is the umbrella for the Scania and MAN brands. Components & Procurement will function as one unit spanning all of the brands and supporting them. The Financial Services business has been combined into a single unit.

This prepares the Volkswagen Group for a management structure that is simpler, leaner and more effective, and strengthens the brands, giving them more autonomy. In line with the principle of subsidiarity, decisions will be taken at the lowest competent level, close to business operations.

At the same time, spreading the Group’s management duties more broadly means that responsibility is assigned more clearly and definitively. Every member of the Board of Management has assumed additional higher-level duties for the Group. At the same time, the members of the Board of Management of Volkswagen AG have responsibility for a brand group or operating unit, improving collaboration between the brands and the Group as a whole and ensuring that management of the Group is a shared undertaking.

Each brand in the Volkswagen Group is managed by a brand board of management, which ensures its independent and self-contained development and business operations. To the extent permitted by law, the board adheres to the Group targets and requirements laid down by the Board of Management of Volkswagen AG, as well as with the agreements in the brand groups. This allows Group-wide interests to be pursued, while at the same time safeguarding and reinforcing each brand’s specific characteristics. Matters that are of importance to the Group as a whole are submitted to the Group Board of Management in order to reach agreement between the parties involved, to the extent permitted by law. The rights and obligations of the statutory bodies of the relevant brand company remain unaffected.

The companies of the Volkswagen Group are managed by their respective managements on their own responsibility. In addition to the interests of their own companies, the management of each individual company takes into account the interests of the Group, the relevant brand group and the individual brands in accordance with the framework laid down by law.

At Group level, committees also address key strategic issues, for example relating to product planning, investments, risks management and management issues. The portfolio of these committees and the regulation landscape at Group level was revised in the reporting year and, in the course of this, a committee was established to manage the technology strategy. This has reduced complexity and reinforced governance within the Group.

Within our future program TOGETHER – Strategy 2025, the Organization 4.0 Group initiative is also supporting the Company’s transformation. The aim of this initiative is to connect activities across divisions, initiate new organizational approaches and anchor these in the Group for the long term. This will not only enable but actively create holistic stimulus for innovation, entrepreneurship and change.

**MATERIAL CHANGES IN EQUITY INVESTMENTS**

The control and profit and loss transfer agreement between MAN SE, as the controlled company, and TRATON SE (at that time Volkswagen Truck & Bus AG), a wholly owned subsidiary of Volkswagen AG, as the controlling company, came into force upon its entry in the commercial register on July 16, 2013. The conclusion of the control and profit and loss transfer agreement replaced, the group based on the de facto exercise of management control with a contractual group, permitting considerably more efficient and less bureaucratic cooperation between the MAN Group and the rest of the Volkswagen Group. In the summer of 2018, the Higher Regional Court in Munich made a final decision in the award proceedings regarding the appropriateness of the cash settlement and the right to compensation for the non-controlling interest shareholders of MAN SE, ruling that the cash settlement amount set out in the contract should be increased to €50.29 per share and the annual compensation to €5.47 gross per share. Following the entry of the final decisions in the commercial register in August 2018, the noncontrolling interest shareholders were entitled to tender their shares in accordance with section 305 of the Aktiengesetz (AktG – German Stock Corporation Act) within a two-month period. The decision in the award proceedings resulted in a significant increase in the annual compensation to be paid to noncontrolling interest shareholders of MAN SE. In the opinion of the Board of Management at TRATON SE (at
that time TRATON AG), this was no longer proportionate to the profit transfer from MAN SE and other benefits stipulated in the control and profit and loss transfer agreement; TRATON SE therefore exercised its right to extraordinary termination in accordance with section 304(4) of the German Stock Corporation Act on August 22, 2018 and terminated the control and profit and loss transfer agreement effective January 1, 2019. As of year-end 2018, TRATON SE held 87.04 (75.73)% of the ordinary shares and 83.05 (46.95)% of the preferred shares in MAN SE. Following the announcement of the termination of the control and profit and loss transfer agreement and the recording thereof in the commercial register on January 3, 2019, the noncontrolling shareholders of MAN SE once again had the right to tender their shares to TRATON SE, pursuant to the provisions of the control and profit and loss transfer agreement, within a two-month period at a cash settlement price of €90.29.

With the Optimize business portfolio Group initiative, the Board of Management intends to ensure the Volkswagen Group’s competitiveness and financial performance as a forward-looking mobility provider by focusing on its core business. To this end, we are continuously monitoring and analyzing our portfolio and can respond in a timely manner by making any necessary purchases or sales.

LEGAL FACTORS INFLUENCING BUSINESS
Like other international companies, the business of Volkswagen companies is affected by numerous laws in Germany and abroad. In particular, there are legal requirements relating to development, products, production and distribution, as well as supervisory, data protection, financial, company, commercial, capital market, anti-trust and tax regulations and regulations relating to labor, banking, state aid, energy, environmental and insurance law.

VOLKSWAGEN AG SHAREHOLDINGS
Corporate Governance Report

Corporate governance is defined as responsible, transparent corporate management and supervision that aim to add long-term value. For us, good corporate governance not only forms the basis for lasting success; it is also an important prerequisite for strengthening the trust of our stakeholders in our work.

THE GERMAN CORPORATE GOVERNANCE CODE – A BLUEPRINT FOR SUCCESSFUL CORPORATE GOVERNANCE

Corporate governance provides the regulatory framework for corporate management and supervision. This includes a company’s organization and values, and the principles and guidelines for its business policy. The German Corporate Governance Code (the Code) contains recommendations and suggestions for sound, responsible corporate management and supervision. It was prepared by a dedicated government commission on the basis of the material provisions and nationally and internationally accepted standards of corporate governance. The government commission regularly reviews the Code in light of current developments and updates it as necessary. The Board of Management and the Supervisory Board of Volkswagen AG base their work on the recommendations and suggestions of the German Corporate Governance Code. We consider good corporate governance to be a key prerequisite for achieving a lasting increase in the Company’s value. It helps strengthen the trust of our shareholders, customers, employees, business partners and investors in our work and enables us to meet the steadily increasing demand for information from national and international stakeholders.

DECLARATIONS OF CONFORMITY (VALID AS OF THE DATE OF THE DECLARATION)

The Board of Management and the Supervisory Board of Volkswagen AG issued the annual declaration of conformity with the Code as required by section 161 of the Aktiengesetz (AktG – German Stock Corporation Act) on November 16, 2018 with the following wording:

“The Board of Management and the Supervisory Board declare the following:

The recommendations of the Government Commission of the German Corporate Governance Code in the version dated 7 February 2017 (the Code) that was published by the German Ministry of Justice in the official section of the Federal Gazette (Bundesanzeiger) on 24 April 2017 was complied with in the period from the last Declaration of Conformity dated 17 November 2017 and will continue to be complied with, with the exception of the numbers listed below and their stated reasons listed below.

a) 4.2.3(4) (severance payment cap)
A severance payment cap will be included in new contracts concluded with members of the Board of Management, but not in contracts concluded with Board of Management members entering their third term of office or beyond, provided a cap did not form part of the initial contract. Grandfather rights have been applied accordingly.

b) 5.3.2(3) sentence 2 (indep endence of the chair of the Audit Committee)
It is unclear from the wording of this recommendation whether the Chairman of the Audit Committee is “independent” within the meaning of number 5.3.2(3) sentence 2 of the Code. Such independence could be considered lacking in view of his seat on the Supervisory Board of Porsche Automobil Holding SE, kinship with other members of the Supervisory Board of the company and of Porsche Automobil Holding SE, his indirect minority interest in Porsche Automobil Holding SE, and business relations with other members of the Porsche and Piëch families who also have an indirect interest in Porsche Automobil Holding SE. However, in the opinion of the Supervisory Board and the Board of Management, these relationships do not constitute a conflict of interest nor do they interfere with his duties as the Chairman of the Audit Committee. This deviation is therefore being declared purely as a precautionary measure.

c) 5.4.1(6 to 8) (disclosure regarding election recommendations)
With regard to the recommendation under number 5.4.1(6-8) of the Code stating that certain circumstances disclosed by the Supervisory Board when making election recommendations to the Annual General Meeting, the stipula-
tions of the Code are vague and the definitions unclear. Purely as a precautionary measure, the Board of Management and the Supervisory Board therefore declare a deviation from the Code in this respect. Notwithstanding this, the Supervisory Board will make every effort to satisfy the requirements of the recommendation.”

With the exception of number 4.2.3(2) sentence 9 (no early disbursements of variable remuneration components) and number 5.1.2(2) sentence 1 (duration of first-time appointments to the Board of Management), the suggestions in the current version of the Code have been complied with. The general compensation clauses in the contracts with members of the Board of Management may, if applied accordingly, result in early disbursement of multi-year variable remuneration components. The Supervisory Board will decide the duration of each first-time appointment to the Board of Management on an individual basis, taking the best interests of the Company into account. The suggestion made in number 2.3.2 sentence 2 (accessibility of the voting proxy during the Annual General Meeting) was implemented at the 2018 Annual General Meeting in such a manner that the shareholders were able to reach the voting proxies named by the Company to exercise their voting rights until 1:00 pm, also by electronic means. The suggestion made in number 2.3.3 (broadcast of the Annual General Meeting) was implemented at the 2018 Annual General Meeting so that the introductory remarks by the Chairman of the Supervisory Board and the speech of the Chairman of the Board of Management were broadcast.

Our listed subsidiaries AUDI AG, MAN SE and RENK AG have also each issued declarations of conformity with the German Corporate Governance Code. The declarations of conformity of our listed subsidiaries can be accessed at the websites shown on this page.

COOPERATION BETWEEN THE BOARD OF MANAGEMENT AND THE SUPERVISORY BOARD

The Supervisory Board advises and monitors the Board of Management with regard to the management of the Company and is directly involved in decisions of fundamental importance to the Company. The Board of Management and the Supervisory Board of Volkswagen AG consult closely on the strategic orientation of the Volkswagen Group. The two bodies jointly assess, at regular intervals, the progress made in implementing the corporate strategy. The Board of Management reports to the Supervisory Board regularly, promptly and comprehensively in both written and oral form on all issues of relevance for the Company with regard to strategy, planning and the situation of the Company, the development of the business, the risk situation, risk management and compliance.

More information on the cooperation between the Board of Management and the Supervisory Board of Volkswagen AG and on the work and structure of the committees of the Supervisory Board can be found in the Report of the Supervisory Board on pages 12 to 17 of this annual report.

Information on the members of the Board of Management and Supervisory Board, as well as on the Supervisory Board committees can be found on pages 86 to 89.

OBJECTIVES FOR THE COMPOSITION OF THE SUPERVISORY BOARD AND BOARD OF MANAGEMENT AS WELL AS THE SENIOR EXECUTIVE POSITIONS

In view of the Company’s specific situation, its purpose, its size and the extent of its international activities, the Supervisory Board of Volkswagen AG strives to achieve a composition that takes the Company’s ownership structure and the following aspects into account:

- At least three members of the Supervisory Board should be persons who embody the criterion of internationality to a particularly high degree.
- At least four members of the Supervisory Board should be shareholder representatives with no potential conflicts of interest, particularly conflicts of interest that could arise from an advisory or board position at customers, suppliers, lenders, or other third parties.
- At least four members of the Supervisory Board must be persons who are independent as defined in number 5.4.2 of the Code.
- At least three of the seats on the Supervisory Board should be held by people who make a special contribution to the diversity of the Board.
- Furthermore, proposals for elections should not normally include persons who will have reached the age of 75 on the date of the election or who will have been members of the Supervisory Board for more than 15 years on the date of the election.

The above criteria have been met. The independent members of the Supervisory Board within the meaning of number 5.4.2 of the Code are or were as follows: Ms. Hessa Sultan Al-Jaber, Ms. Louise Kiesling, Mr. Hussain Ali Al-Abdulla, Mr. Bernd Althusmann and Mr. Stephan Weil, as well as Ms. Annika...
Falkengren, who left the Supervisory Board during the reporting year.

In addition, the Supervisory Board has decided on the following profile of skills and expertise for the full Board:

The Supervisory Board as a whole must collectively have the knowledge, skills and professional expertise required to properly perform its supervisory function and assess and monitor the business that the Company conducts. For this, the members of the Supervisory Board must collectively be familiar with the sector in which the Company operates. The key skills and requirements of the Supervisory Board as a whole include, in particular:

- Knowledge of or experience in the manufacture and sale of all types of vehicles and engines or other technical products,
- Knowledge of the automotive industry, the business model and the market, as well as product expertise,
- Knowledge in the field of research and development, particularly of technologies with relevance for the Company,
- Experience in corporate leadership positions or in the supervisory bodies of large companies,
- Knowledge in the areas of governance, law or compliance,
- Detailed knowledge in the areas of finance, accounting, or auditing,
- Knowledge of the capital markets,
- Knowledge in the areas of controlling/risk management and the internal control system,
- Human resources expertise (particularly the search for and selection of members of the Board of Management, and the succession process) and knowledge of incentive and remuneration systems for the Board of Management,
- Detailed knowledge or experience in the areas of codetermination, employee matters and the working environment in the Company.

The current composition of the Supervisory Board is also in line with this profile of skills and expertise. The curriculum vitae of the members of the Supervisory Board are available online at www.volkswagenag.com/en/group/executive-bodies.html.

The statutory quota of at least 30% women and at least 30% men has applied to new appointments to the Supervisory Board of Volkswagen AG since January 1, 2016 as required by the Gesetz für die gleichberechtigte Teilhabe von Frauen und Männern an Führungspositionen in der Privatwirtschaft und im öffentlichen Dienst (FührposGleichberG – German Act on the Equal Participation of Women and Men in Leadership Positions in the Private and Public Sectors). Shareholder and employee representatives have resolved that each side will meet this quota separately. The shareholder representatives have met the quota of at least 30% women and at least 30% men since the 56th Annual General Meeting on June 22, 2016. The employee representatives have met the quota since the end of the 57th Annual General Meeting on May 10, 2017. Both the shareholder and the employee representatives fulfilled the quota on December 31, 2018.

The Supervisory Board set a target quota of 11.1% for the period after December 31, 2016 for the proportion of female members on the Board of Management as required in accordance with the FührposGleichberG. The new deadline set for achievement of this target is December 31, 2021. The proportion of female members on the Group Board of Management as of December 31, 2018 was 12.5%, thus meeting the target quota.

For the proportion of women in management in accordance with the FührposGleichberG, Volkswagen AG has set itself the target of 13.0% women in the first level of management and 16.9% women in the second level of management for the period up to the end of 2021. As of December 31, 2018, the proportion of women in the active workforce at the first level of management was 10.7 (10.4)% and at the second level of management it was 15.4 (14.0)%.

Extensive explanations of the remuneration system and the individual remuneration of the members of the Board of Management and Supervisory Board can be found in the Remuneration Report starting on page 68 of the combined management report, in the notes to Volkswagen’s consolidated financial statements on page 329, and on page 62 of the notes to the annual financial statements of Volkswagen AG.

The Group corporate governance declaration forms part of the combined management report and is permanently available at www.volkswagenag.com/en/InvestorRelations/corporate-governance/declaration-of-conformity.html. It also contains the description of the diversity concepts for the Board of Management and Supervisory Board of Volkswagen AG.
Volkswagen is undergoing one of the furthest-reaching processes of change in the Company’s history. A strategic objective as part of TOGETHER – Strategy 2025 is to make Volkswagen a role model of a modern, transparent and successful company when it comes to integrity.

With the Board of Management position for Integrity and Legal Affairs, the Group has put in place the organizational prerequisites for centralized integrity management. This Group function is responsible for planning, preparing and implementing programs and projects aimed at raising awareness, providing information and reinforcing a shared awareness of integrity.

Integrity at Volkswagen is defined as acting out of conviction, with responsibility and steadfastness. Integrity is an inner disposition that acts as an internal moral compass for doing the right thing in gray areas, in the absence of explicit rules or in the event of conflicting objectives. This means complying with our Group principles and the ethical principles established therein and behaving correctly in accordance with rules. This also includes the steadfastness needed to adhere to these principles – regardless of economic and social pressure.

Already in 2016, we launched a comprehensive integrity program with information campaigns, opportunities for dialog and initiatives aimed at all employees. This encompasses measures such as international get-togethers for managers and integrity workshops for team spokespeople in production. In addition, we have launched an ambassador program that helps multipliers to make integrity a visible and practical part of everyday working life. We have also worked intensively to create an integrity index. This is due to be piloted in 2019 at the German locations of the Volkswagen Passenger Cars and Audi brands as a joined-up approach to measuring integrity.

We firmly believe: only with lasting, dependable integrity will our Company gain and strengthen the trust of its staff, customers, shareholders, business partners and the general public. The Group Board of Management therefore resolved in April 2018 to combine the programs and initiatives on integrity, compliance, risk management and culture under the umbrella program “Together4Integrity”, and thus to reinforce them.

With “Together4Integrity” (T4I), the Board of Management of Volkswagen AG has initiated an umbrella program with which to embed excellence in integrity and compliance throughout the Group – in all brands, regions and companies and in respect of processes, structures, attitudes and behavior. The program plays an integral and central role at Volkswagen. It consolidates, combines and coordinates the Group-wide initiatives that are led by the responsible divisions. It also encourages discussion and mutual learning, thus ensuring continuous improvement. Uniform and consistent implementation according to a firm schedule is planned for all Group companies, prioritized by their size and risk profile.

T4I is based on the five principles of the internationally recognized Ethics & Compliance Initiative (ECI). These principles relate to strategy, risk management, culture of integrity, speak-up environment and resolute accountability. They are codified as the Group’s aspiration level and are implemented through T4I. The Board of Management positions for Integrity and Legal Affairs and for Human Resources are responsible for the program. The other Board of Management positions act as sponsors, thus ensuring that T4I is successfully implemented in their area of responsibility.
Acting with integrity, compliance and honesty is an essential prerequisite for the success of the Volkswagen Group. For this reason, compliance with national and international laws and regulations, internal rules and voluntary commitments is among our Company’s most important principles. We are striving to strengthen the trust of our customers, our business partners and stakeholders in our Group through fair treatment. Compliant behavior is the basis for this and must be a matter of course for all Group employees. One of our Company’s main tasks is to further enhance awareness of this.

Commitment to compliance at the highest level
At the Global Management Meeting in June 2018, Herbert Diess, Chairman of the Board of Management of Volkswagen AG, underlined that integrity and compliant behavior are the responsibility of each individual in the Group: “We need dependable structures and work processes that ensure impeccable, compliant behavior. But we also need a firmly rooted sense of right and wrong, a better way of handling mistakes, a culture of constructive dissent and a stronger sense of responsibility in the management team.”

In an interview in August 2018, Hiltrud Dorothea Werner, member of the Board of Management responsible for Integrity and Legal Affairs, explained the importance of dealing thoroughly and quickly with cases of suspicion and compliance violations in the Company: “The nearer Compliance is to people and processes, the better, because preventing a problem from becoming a scandal also means acting with speed and investigating thoroughly.”

Compliance organization
The Group Compliance Committee at top management level is chaired by the member of the Board of Management responsible for Integrity and Legal Affairs and met regularly in the reporting year. This committee ensures that compliance and integrity standards are uniformly developed, applied and communicated on a cross-divisional and cross-brand basis.

Central divisions within the Group are supported and advised by their own compliance contacts. Additional centers of competence are responsible for the overall direction of compliance work and develop compliance instruments and program components with which the companies can implement the compliance requirements themselves across the Group. During the reporting period, additional resources are set aside for these tasks.

The global compliance organization at the Volkswagen Group comprises divisional and regional compliance offices. It supports and advises the respective Group and brand companies with an effective, risk-based, Group-wide compliance management system, helping them to conduct their business activities in accordance with the rules and to consistently adhere to relevant laws and internal regulations. It also helps companies to identify, evaluate, manage and monitor potential compliance risks. Additional compliance resources were provided across the Group on a risk-oriented basis in the reporting year. Higher-level compliance functions are involved in the appointment of new compliance officers and conduct a standardized appointment and induction process.

In the reporting period, there was direct communication on compliance issues at meetings of the Supervisory Board, the Board of Management and the Works Council, particularly by the member of the Board of Management responsible for Integrity and Legal Affairs and the Group Chief Compliance Officer.

The Group Chief Compliance Officer reports directly to the member of the Board of Management responsible for Integrity and Legal Affairs and also to the Audit Committee of the Supervisory Board of Volkswagen AG.

The heads of the centers of competence report to the Group Chief Compliance Officer on disciplinary and functional matters. The compliance officers of the brand companies and the head of the regional compliance office for China report to the Group Chief Compliance Officer on functional matters. Meetings and conferences ensure that those responsible for compliance at Group and brand level are connected and communicate regularly.

Compliance management system
Our compliance management system is aligned with national and international laws and standards. Its objective is to encourage, reinforce and ensure compliant behavior in the Company in a lasting manner. The focus of our compliance organization is on preventing corruption, breaches of trust, embezzlement, fraud and money laundering and thereby on reducing the risk of unlawful actions. The Code of Conduct is the key element for raising awareness among staff of correct behavior and finding the right contact person in cases of doubt.

Where laws and regulations have been violated, our whistleblower system is a suitable tool for taking appropriate action. We enhanced the whistleblower system in 2018: members of management are obligated to report every indication
of serious rule-breaking. Failure to do so is itself a serious infringement. The accessibility of the whistleblower system has been further improved with a 24-hour hotline.

We place value on communication and training seminars to permanently anchor compliance-related content among the workforce.

Compliance work in the Volkswagen Group is based on a systematic process of risk identification and reporting in accordance with the IDW standard AsS 980. We used 2018 to review the content of and the process for the existing compliance risk analysis. The objective is to obtain transparency at Group level of the risk exposure of all Group companies included in the compliance scope.

However, we are also aware that even the best compliance management system can never entirely prevent the criminal actions of individuals.

Code of Conduct and guidelines
The Volkswagen Group’s Code of Conduct is established throughout the Group. It is permanently available to all employees on the intranet and also to third parties on the internet and is continually communicated via digital and print media and at events within the Company.

The Code of Conduct is a significant part of the compliance training completed by all staff, from the Board of Management to employees. Both face-to-face and online training are used. The Code of Conduct is also integrated into operational processes. For example, employment contracts for employees of Volkswagen AG generally include a reference to the Code of Conduct and the obligation to comply with it. Furthermore, compliance with the Code of Conduct remained a component of our employees’ annual reviews in the reporting period and was thus taken into account when calculating their variable, performance-related remuneration.

In addition to the Volkswagen Group Code of Conduct, there are various Group policies and guidelines on specific compliance issues. Organizational instructions on dealing with gifts and invitations as well as on making donations also apply across the Group.

Employees have access to the compliance rules and regulations in particular via the compliance pages on the Company intranet.

Whistleblower system
In the Volkswagen Group, the whistleblower system refers to the internal and external contact points where employees and third parties can report potential violations of laws and internal regulations by employees of the Volkswagen Group. It also refers to the committees that support and monitor the work of these contact points.

The Company has had a system for reporting breaches of the law or regulations since 2006. In 2017, the whistleblower system was improved and partially reorganized. Processes were further optimized to enable reports to be followed up on even more quickly, fairly and transparently. Among other things, a central investigative office has been set up in the Compliance department. It is responsible for coordinating the whistleblower system within the Volkswagen Group and for processing information concerning Volkswagen AG and its subsidiaries – with the exception of AUDI AG, Dr. Ing. h.c. F. Porsche AG and TRATON SE. These companies each have separate investigative offices for themselves and their subsidiaries.

The whistleblower system uses defined processes to investigate reports on breaches and to penalize misconduct where appropriate. Protection of both the whistleblower and the party affected has top priority in the applicable procedural principles and guarantees. In addition, a Group Guideline sets out the responsibilities in the Group and the specific procedure for the processing of reports. The aim of the whistleblower system is to protect our company and employees from harm using firm principles and a clearly governed, transparent and fair process. Moreover, experience with violations of laws and regulations also helps us to constantly enhance our compliance management and prevent similar incidents in future.

Information on misconduct can be submitted in any of the major languages used by the Group and is treated confidentially. The people providing the information need not fear any sanctions from the Company for providing the information. In principle, they can decide for themselves whether they wish to give their names. For this reason, a specially protected online reporting channel was additionally set up in 2017, which whistleblowers can use anonymously. We also continue to rely on existing tried-and-tested channels such as ombudspersons (counsels of trust).
Since August 1, 2018, information on possible rule-breaking has also been reportable via a telephone hotline in addition to the existing reporting channels. Employees, business partners and customers worldwide can submit information 24 hours a day, 365 days a year. Callers are put through to a specially trained contact person with access to an interpreter if required. In addition, a revised Group policy was adopted in August 2018. This enhances the whistleblower system, particularly with its expanded communication options. It was also decided to provide additional resources for the expansion of the whistleblower system.

The Compliance organization registered a total of 2,920 reports throughout the Group in 2018. All substantiated reports have been, or will be, investigated, and any misconduct penalized.

**Communication, training and advice**

Providing information to employees at all levels on compliance, raising their awareness of compliant behavior and offering them advice as partners within the Company is a core component of our compliance activities.

We use all of our internal communication channels to communicate compliance-related content. These include online and offline media as well as event and training formats.

Online communication is primarily via the compliance organization’s own sites on the Volkswagen intranet and via the in-house, Group-wide communication platform “Group Connect”, which is also used for direct dialog with the target groups. There are also articles, interviews and other publications in cross-brand and specific divisions’ media. In the reporting year, compliance-related topics were also featured at various information events for employees and at works meetings at several locations. Communication regarding the whistleblower system was integrated into an event on corporate culture that took place across multiple locations.

Following a risk-based approach, mandatory compliance training is conducted for specific target groups. In addition to traditional lectures and online tutorials, case studies, role-playing games and other interactive formats form part of the training provided to employees and managers.

In the reporting year, the focus was on enhancing Code of Conduct training and, in particular, on commencing the introduction of compulsory training regarding the Code of Conduct for all employees in the Group.

Employees can also use special e-mail addresses to solicit advice on compliance issues.

**Compliance key performance indicators**

To measure the level of target achievement, we defined a strategic indicator for the major brands that manufacture passenger cars:

- Compliance, a culture of error management and behaving with integrity. This is based on an evaluation of the answers to three questions in the opinion survey relating to compliance with regulations and processes, dealing with risks and errors and behaving with integrity. In the case of negative deviations, the affected departments develop and implement measures. In the reporting year, the figure further improved on the already good basis.

**Strengthening compliance in company processes**

The act implementing the Fourth EU Money Laundering Directive into German law presented new requirements for Volkswagen AG as a company that is bound by the Gesetz über das Aufspüren von Gewinnen aus schweren Straftaten (GWG – Law on Tracing Profits from Serious Criminal Offences). The Group policy adopted and published in this context by the Board of Management in 2018 defines the minimum standard to be implemented by all Group companies.

In 2018, we designed and developed a new IT tool for a risk-based business partner selection process at the Volkswagen Group. We began pilot testing of the tool at the end of the reporting year. This business partner selection process will be gradually introduced in the Group from 2019. A key objective of this new process is the creation of transparency within the Volkswagen Group to prevent Group companies from entering into business relationships with business partners which other Group companies have previously classified as not acting with integrity.

New business models are constantly being considered in the Volkswagen Group as part of the TOGETHER – Strategy 2025 program. These business models focus particularly on digitalization, automation and electrification, but also on the development of and involvement in mobility concepts. The
compliance organization helps the strategic business units to implement their forward-looking projects through individual risk assessments and recommendations based on these.

In addition, compliance will become more firmly embedded in mergers and acquisitions and real estate transactions.

**Effectiveness review**

Independent reviews by Group Internal Audit in the corporate units and the regular exchange of information with external bodies help ensure continuous improvement of the compliance management system. There are no indications that our current compliance management system was ineffective in 2018.

**INDEPENDENT MONITOR**

In June 2017, in connection with the diesel issue, Larry D. Thompson was appointed as the Independent Compliance Monitor at Volkswagen under the terms of the Plea Agreement with the United States Department of Justice announced on January 11, 2017 and confirmed by a US federal court on April 21, 2017. He also works as Independent Compliance Auditor under the Third Partial Consent Decrees concluded separately with the US Department of Justice and the US Environmental Protection Agency (EPA) and the Third California Partial Consent Decree agreed with the US State of California and the environmental authority California Air Resources Board, CARB (for more information on these agreements, please see the Litigation section starting on page 177). Mr. Thompson will perform his duties under the Plea Agreement and Third Partial Consent Decrees for a period of three years, which also includes taking measures to further strengthen the Company’s compliance, reporting and monitoring mechanisms and the implementation of an enhanced compliance and ethics program.

Mr. Thompson submitted a report on March 30, 2018 in his capacity as the Independent Compliance Monitor on the basis of the Plea Agreement; in accordance with the provisions of the Plea Agreement, the report will not be published. In addition, in his capacity as the Independent Compliance Auditor under the terms of the Third Partial Consent Decrees, Mr. Thompson prepared his first annual report, published on August 27, 2018.

**RISK MANAGEMENT, AUDIT**

Carefully managing potential risks to the Company is a key component of our daily work. The Volkswagen Group’s risk management system is oriented toward identifying, assessing, communicating and managing risks at an early stage. This system is reviewed on an ongoing basis and adjusted if and when conditions change. A detailed description of the risk management system and our accounting-related internal control system can be found in the Risk Report on pages 163 to 166 of this annual report.

The Supervisory Board has established an Audit Committee that in particular monitors the financial accounting, the financial accounting process, the effectiveness of the internal control system, the risk management system and the internal audit system, the audit of the financial statements and compliance. Furthermore, the Audit Committee makes a well-founded recommendation for the election of the auditor to the Supervisory Board, obtains a declaration of independence from the auditor, supervises the additional services provided by the auditor and prepares the audit engagement resolution. It also discusses the annual audit planning, the determination of areas of emphasis for the audit, the agreed fee and the auditor’s obligation to provide information.
COMMUNICATION AND TRANSPARENCY

The Volkswagen Group publishes a financial calendar listing all the relevant dates for its shareholders in its annual report and interim reports as well as on its website at www.volkswagenag.com/en/InvestorRelations.html. Among other things, invitations to the shareholders’ meetings as well as agendas for these meetings and any motions to be added to the agenda or countermotions received are also available on this website. At the shareholders’ meetings, shareholders may exercise their voting rights themselves, have this right exercised on their behalf by a third-party proxy whom they have appointed, or use a proxy designated by the Company who votes on their behalf in accordance with their voting instructions. We also give our shareholders the opportunity to watch the introductory remarks of the Chairman of the Supervisory Board and the speech of the Chairman of the Board of Management on the internet. In addition, news and information on the Volkswagen Group are available on this website. The press releases and other information are published in both English and German.

Immediately after their publication in accordance with legal requirements, the Company’s ad-hoc releases are also published on the same website under the heading “Financial News, Ad-hoc Releases & Publications”.

We publish managers’ transactions pursuant to Article 19 of the Market Abuse Regulation or section 15a of the Wertpapierhandelsgesetz (WpHG – German Securities Trading Act) under the heading “Corporate Governance”, menu item “Directors’ Dealings”. On the same web page – under the heading “Financial News, Ad-hoc Releases & Publications”, menu item “Voting Rights” – you can also access details of the notifications filed in the reporting period in compliance with sections 33 ff. of the WpHG as well as notifications relating to other legal issues.

The supervisory body appointments held by Board of Management members and Supervisory Board members can be found on pages 86 to 89 of this annual report. The shareholder structure is presented on page 110.
Remuneration Report

The Remuneration Report details the individualized remuneration of the Board of Management and the Supervisory Board of Volkswagen AG, broken down into components, as well as individualized pension provision disclosures for the members of the Board of Management. In addition, we explain in this chapter the main elements of the remuneration system for the Board of Management.

PRINCIPLES OF BOARD OF MANAGEMENT REMUNERATION

Matters involving the remuneration system and the total remuneration of each individual member of the Volkswagen AG Board of Management are decided on by the Supervisory Board on the basis of the Executive Committee’s recommendations. The remuneration system implements the requirements of the Aktiengesetz (AktG – German Stock Corporation Act) and the recommendations of the German Corporate Governance Code (the Code). In particular, the remuneration structure is focused on ensuring sustainable business development in accordance with the Gesetz zur Angemessenheit der Vorstandsvergütung (VorstAG – German Act on the Appropriateness of Executive Board Remuneration) and section 87(1) of the AktG.

At the beginning of 2017, the Supervisory Board of Volkswagen AG resolved to adjust the remuneration system of the Board of Management with effect from January 1, 2017. The system for remuneration of the Board of Management was approved by the Annual General Meeting on May 10, 2017 with 80.96% of the votes cast. The adjustment, in which the Supervisory Board was assisted by renowned, independent external remuneration and legal consultants, resulted in an alignment with the Group strategy TOGETHER – Strategy 2025.

The level of the Board of Management remuneration should be appropriate and attractive in the context of the Company’s national and international peer group. Criteria include the tasks of the individual Board of Management member, their personal performance, the economic situation, and the performance of and outlook for the Company, as well as how customary the remuneration is when measured against the peer group and the remuneration structure that applies to other areas of Volkswagen. In this context, comparative studies on remuneration are conducted on a regular basis.

COMPONENTS OF BOARD OF MANAGEMENT REMUNERATION

In this section, we provide an overview of the Board of Management’s remuneration system before going into the components of the remuneration for the reporting period.

Overview of the remuneration system

The remuneration system of the Board of Management comprises non-performance-related and performance-related components. The performance-related remuneration consists of an annual bonus with a one-year assessment period and a long-term incentive (LTI) in the form of a performance share plan with a forward-looking three-year term. The performance share plan is linked to business development in the next three years and is thus based on a multiyear, forward-looking assessment that reflects both positive and negative developments. The non-performance-related component creates an incentive for individual members of the Board of Management to perform their duties in the best interests of the Company and to fulfill their obligation to act with proper business prudence without needing to focus on merely short-term performance targets. The performance-related components, dependent among other criteria on the financial performance of the Company, serve to ensure the long-term impact of behavioral incentives.

If 100% of the respectively agreed targets are achieved, the annual target remuneration for each member of the Board of Management will amount to a total of €4,500,000 (corresponding to a fixed remuneration of €1,350,000, a target amount from the annual bonus of €1,350,000 and a target amount from the performance share plan of €1,800,000). The annual target remuneration for the Chairman of the Board of
Management amounts to a total of €9,000,000 (fixed remuneration of €2,125,000, a target amount from the annual bonus of €3,045,000, and a target amount from the performance share plan of €3,830,000).

Annual minimum remuneration of €3.5 million (sum of fixed remuneration, annual bonus, LTI and any special payments) was contractually agreed with Mr. Sommer. Annual minimum remuneration of €3.5 million (sum of fixed and variable remuneration) was contractually agreed with Mr. Blessing.

Non-performance-related remuneration
The non-performance-related remuneration comprises fixed remuneration and fringe benefits. Since 2018, separate remuneration is no longer provided for appointments assumed at Group companies, but is covered by the fixed remuneration. The fringe benefits result from noncash benefits and include in particular the use of operating assets such as company cars and the payment of insurance premiums. Taxes due on these noncash benefits are mainly borne by Volkswagen AG.

The fixed level of remuneration is reviewed regularly and adjusted if necessary.

Performance-related remuneration
The performance-related/variable remuneration consists of an annual performance-related bonus with a one-year assessment period and a long-term incentive (LTI) in the form of a performance share plan with a forward-looking three-year term (long-term incentive components) and phantom preferred shares. The components of performance-related/variable remuneration reflect both positive and negative developments.

The Supervisory Board may cap the performance-related/variable remuneration components in the event of extraordinary developments.

Annual bonus
The annual bonus is based upon the result for the respective fiscal year. Operating profit achieved by the Volkswagen Group plus the proportionate operating profit of the Chinese joint ventures form half of the basis for the annual bonus, with operating return on sales achieved by the Volkswagen Group making up the second half. Each of the two components of the annual bonus will only be payable if certain thresholds are exceeded or reached.

The calculated payment amount may be individually reduced (multiplier of 0.8) or increased (multiplier of 1.2) by up to 20% by the Supervisory Board, taking into account the degree of achievement of individual targets agreed between the Supervisory Board and the respective member of the Board of Management, as well as the success of the full Board of Management in transforming the Volkswagen Group by transferring employees to new areas of activity.

The payment amount for the annual bonus is capped at 180% of the target amount for the annual bonus. The cap arises from 150% of the maximum financial target achievement and a performance factor of a maximum of 1.2.

Performance share plan — long-term incentive (LTI)

The LTI is granted to the Board of Management annually in the form of a performance share plan. Each performance period of the performance share plan has a term of three years. At the time the LTI is granted, the annual target amount under the LTI is converted on the basis of the initial reference price of Volkswagen’s preferred shares into performance shares of Volkswagen AG, which are allocated to the respective member of the Board of Management purely for calculation purposes. The conversion is performed based on the unweighted average of the closing prices of Volkswagen’s preferred shares for the last 30 trading days preceding January 1 of a given fiscal year. At the end of each year, the number of performance shares is determined definitively for one-third of the three-year performance period based on the degree of target achievement for the annual earnings per Volkswagen preferred share (EPS — earnings per share per preferred share in €). A prerequisite for this is that a threshold is reached.

A cash settlement is made at the end of the three-year term of the performance share plan. The payment amount corresponds to the final number of determined performance shares, multiplied by the closing reference price at the end of the three-year period plus a dividend equivalent for the relevant term. The closing reference price is the unweighted average of the closing prices for Volkswagen’s preferred shares for the 30 trading days preceding the last day of the three-year performance period.

The payment amount under the performance share plan is limited to 200% of the target amount. An advance of 20% on the payment amount is paid if the average ratio of capex to sales revenue in the Automotive Division or the R&D ratio of the last three years is smaller than 5%.

If the employment contract of a member of the Board of Management concludes prior to the end of the performance period due to extraordinary termination based on good cause, or if the member of the Board of Management starts working for a competitor, (also referred to as “bad-leaver cases”), the unpaid performance shares will expire. For members of the Board of Management who held their seat as of December 31, 2016, this rule only applies in the event of a reappointment or new appointment.

In connection with the appointment of the Chairman of the Board of Management, the employment contract of Mr. Diess was terminated by mutual agreement in 2018 and a new employment contract was entered into, although the expiry rule described above applies from the 2018–2020 performance period onwards.

Ms. Werner was appointed as a member of the Board of Management in 2017. Mr. Blume, Mr. Kilian and Mr. Sommer were newly appointed to the Board of Management in 2018.

In the introductory phase of the performance share plan (2017–2018), the members of the Board of Management who were Board members as of December 31, 2016 will generally receive advances of 80% of their target amount. Mr. Stadler did not receive an advance payment for the performance period 2018–2020. Mr. Blume will receive corresponding advances for the performance periods 2018–2020 (proportionate) and 2019–2021. The two advances will each be paid after the first year of the performance period. A settlement is made based on actual achievement of targets at the end of the relevant three-year performance period.

</table>

1 In connection with Mr. Stadler’s departure, the number of performance shares allocated to him was reduced to 4,890 (fair value: €828,464).
The number of performance shares includes the provisional performance shares allocated at the grant date of the performance share plan. The fair value as at the grant date was determined using a recognized valuation technique.

The provision recognized as of December 31, 2018 reflects the obligation to the members of the Board of Management. To determine its amount, the performance shares expected for future performance periods were taken into account in addition to the provisional performance shares determined or allocated for the performance periods 2017–2019 and 2018–2020. The amount therefore depends on the individual contract term and the relevant vesting arrangements for the performance shares. The intrinsic value was calculated in accordance with IFRS 2 and corresponds to the amount that the members of the Board of Management would have received if they had stepped down on December 31, 2018. Only the nonforfeitable (vested) performance shares at the reporting date are included in the calculation. The intrinsic value was calculated based on the unweighted average share price for the 30 trading days (Xetra closing prices of Volkswagen’s preferred shares) preceding December 31, 2018, taking the dividends paid per preferred share during the performance period into account. The net value of all amounts recognized in income for the performance shares in fiscal year 2018 is recorded in comprehensive income 2018 arising from performance shares according to the IFRSs.

Phantom preferred shares

The phantom preferred shares for the remuneration withheld for 2015 will form part of the Board of Management remuneration until they are paid out in 2019.

Total remuneration cap

In addition to the cap on the individual variable components of the remuneration for the members of the Board of Management, the annual benefits received according to the Code, consisting of fixed remuneration and the variable remuneration components (i.e. annual bonus and performance share plan) for one fiscal year may not exceed an amount of €10,000,000 for the Chairman of the Board of Management and €5,500,000 for each member of the Board of Management. If the total remuneration cap is exceeded, the variable components will be reduced proportionately.

Regular review and adjustment

The Supervisory Board regularly reviews and, if necessary, adjusts the level of the total remuneration cap and the individual targets.

Other agreements

Members of the Board of Management with contracts entered into on or after January 1, 2010 are entitled to payment of their normal remuneration for six to twelve months in the event of illness. Contracts entered into before that date grant remuneration for six months. In the event of disability, they are entitled to the retirement pension. Surviving dependents receive a widow’s pension of 66 ⅔% and orphans’ benefits of 20% of the former member of the Board of Management’s pension. Contracts with members of the Board of Management whose first term of office began after April 1, 2015, provide for an entitlement – in line with the principles of the works agreement that also applies to employees of Volkswagen AG covered by collective agreements – to a widow’s pension of 60%, an orphan’s benefit of 10% for half-orphans and an orphan’s benefit of 20% for full orphans, based in each case on the former member of the Board of Management’s pension.
BENEFITS BASED ON PHANTOM PREFERRED SHARES FROM THE REMUNERATION WITHHELD FOR FISCAL YEAR 2015

At its meeting on April 22, 2016, Volkswagen AG’s Supervisory Board accepted the offer made by the members of the Board of Management to withhold 30% of the variable remuneration for fiscal year 2015 for the Board of Management members active on the date of the resolution and to make its disposal subject to future share price performance.

This is being effected by first converting the amount withheld based on the average share price for the 30 trading days preceding April 22, 2016 (initial reference price) into phantom preferred shares of Volkswagen AG with a three-year holding period and, at the same time, defining a target reference price corresponding to 125% of the initial reference price. During the holding period, the phantom preferred shares are entitled to dividend equivalents in the amount of the dividends paid on real preferred shares.

The shares will generally be reconverted and paid out when the three-year holding period has expired or – in the event that members retire from office early – at the time they do so.

To determine the payment amount, the average share price for the 30 trading days preceding the last day of the holding period, i.e. April 22, 2019, or the date upon which members leave the company, will be calculated (closing reference price). The difference between the target reference price and the initial reference price will be deducted from the closing reference price, and the dividends distributed on one real Volkswagen preferred share during the holding period (dividend equivalent) will be added to the closing reference price. The figure thus calculated will be multiplied by the number of phantom preferred shares so as to calculate the amount to be paid to each Board of Management member. This will ensure that – excluding any dividend equivalents accrued – the amount withheld is only paid out in full if the initial reference price of the preferred share has increased by at least 25%. Otherwise, the amount will be reduced accordingly to a minimum of €0. The amount disbursed may not be more than twice the amount originally withheld.

In fiscal year 2018, Mr. García Sanz and Mr. Müller – Board members participating in the amount withheld – retired from the Board of Management of Volkswagen AG, while their contract of service remained in place. Therefore, they did not receive any early disbursement. Moreover, the three-year holding period still applies. Due to early termination of the contract of service in 2018, Mr. Stadler received a payment from the amount withheld.

The number of phantom preferred shares granted on April 22, 2016 to the members of the Board of Management who were in office at that time did not change in fiscal year 2018. The fair value as of December 31, 2018 was determined using a recognized valuation technique. The intrinsic value was calculated in accordance with IFRS 2 and corresponds to the amount that the members of the Board of Management would have received if they had stepped down on December 31, 2018. The intrinsic value was calculated based on the unweighted average share price for the 30 trading days (Xetra closing prices of Volkswagen’s preferred shares) preceding December 31, 2018, taking the initial reference price and the dividends for the relevant fiscal years into account. The net value of all amounts recognized in income for the phantom shares in fiscal year 2018 is recorded in comprehensive income 2018 arising from phantom preferred shares according to the IFRSs.

## Remuneration of the Members of the Board of Management in Accordance with the German Commercial Code

The amounts shown as benefits received in the Board of Management remuneration tables in accordance with the Code correspond, in principle, to the amounts paid out for the fiscal year in question. In the introductory phase of the performance share plan (2017 to 2018), the members of the Board of Management who were Board members as of December 31, 2016 generally received advances on the target amount, which in accordance with the Code are reported in the tables as benefits received for the fiscal year in which the performance shares under the plan were allocated; Mr. Stadler did not receive an advance for the 2018–2020 performance period. Mr. Blume will receive corresponding advances for the performance period 2018–2020 (proportionate) and 2019–2021.

### Remuneration of the Members of the Board of Management in Accordance with the German Corporate Governance Code

The amounts shown as benefits granted in the Board of Management remuneration tables in accordance with the Code are based on 100% of the targets for the annual bonus and on the fair value at the grant date for the performance share plan. Since the new members of the Board of Management were appointed on different dates throughout 2018, there is an individual grant date for these Board members and, consequently, a different fair value.

In the Board of Management remuneration tables in accordance with the Code showing benefits received, entries for the phantom preferred shares from the amount withheld for fiscal year 2015 are only included for Mr. Stadler. No other payments for the phantom preferred shares were made in financial year 2018.

**POST-EMPLOYMENT BENEFITS**

In the event of regular termination of their service on the Board of Management, the members of the Board of Management are entitled to a pension, including a surviving dependents’ pension, as well as the use of company cars for the period in which they receive their pension. The agreed benefits are paid or made available when the Board of Management member reaches the age of 63. As a departure from this principle, Mr. Renschler is able to start drawing his pension when he reaches the age of 62.

The retirement provision for members of the Board of Management with an existing occupational pension based on final remuneration is calculated as a percentage of the fixed remuneration, starting from 50%. For Mr. García Sanz, Mr. Heizmann, Mr. Renschler and Mr. Stadler, the individual percentages rise by two percentage points for every year of service. For Mr. Müller, the percentage increases by 4.5% as of March 1, 2017 and 2018. In specific cases, credit is given for previous employment periods and retirement pensions earned. In a departure from this rule, a retirement pension entitlement of 62% of the fixed level of remuneration was set for Mr. Renschler on his appointment. The Supervisory Board has capped the percentage at 70%. These benefits are not broken down any further into performance-related components and long-term incentive components. Mr. Heizmann reached a retirement pension entitlement of 70% of his fixed level of remuneration at the end of 2018; the entitlement for Mr. Renschler is 68%. The increase in the fixed remuneration as a consequence of the remuneration system in place from fiscal year 2017 is therefore not taken into account for the incumbent members of the Board of Management of Volkswagen AG with an existing occupational pension based on final remuneration. Current pensions are index-linked in accordance with the index-linking of the highest collectively agreed salary insofar as the application of section 16 of the Gesetz zur Verbesserung der betrieblichen Altersversorgung (BetrAVG – German Company Pension Act) does not lead to a larger increase.

For the members of the Board of Management of Volkswagen AG appointed before February 24, 2017 with a defined contribution pension scheme, a contribution rate of 50% of the fixed remuneration applies. For the members of the Board of Management of Volkswagen AG appointed after February 24, 2017 with a defined contribution pension scheme, a contribution rate of 40% of the fixed remuneration applies. The resulting amount will be credited to the pension account.

Ms. Werner, Mr. Blessing, Mr. Blume, Mr. Diess, Mr. Kilian, Mr. Sommer and Mr. Witter received a defined contribution plan, which is based in principle on a works agreement that also applies to the employees of Volkswagen AG covered by collective agreements and includes retirement, invalidity and surviving dependents’ benefits. A pension contribution in the amount of 50% of the fixed level of remuneration for Ms. Werner, Mr. Blessing, Mr. Diess and Mr. Witter and in the amount of 40% of the fixed level of remuneration for Mr. Blume, Mr. Kilian and Mr. Sommer is paid to Volkswagen Pension Trust e.V. at the end of the calendar year for each year they are appointed to the Board of Management. The annual pension contributions result in modules of what is, in principle, a lifelong pension in line with the arrangements that also apply to employees covered by collective agreements. The individual pension modules vest immediately upon payment to Volkswagen Pension Trust e.V. Instead of a lifelong pension, benefits can optionally be paid out as a lump sum or in installments when the beneficiary reaches retirement age – currently 63 at the earliest. Volkswagen AG has assumed responsibility for pension entitlements due to Mr. Witter from the time before his service with the Company, although these cannot be claimed before he reaches the age of 60.

On December 31, 2018, the pension obligations for members of the Board of Management in accordance with IAS 19 amounted to €55.8 (125.4) million. €11.9 (12.9) million was added to the provision in the reporting period in accordance with IAS 19. Other benefits such as surviving dependents’ pensions and the use of company cars are also factored into the measurement of pension provisions. The pension obligations measured in accordance with German GAAP amounted to €45.9 (92.4) million. Measured in accordance with German GAAP, €9.5 (15.8) million was added to the provision in the reporting period.

Retired members of the Board of Management and their surviving dependents received €44.0 (19.9) million, or €44.0 (19.9) million measured in accordance with German GAAP, in the past year. Obligations for pensions for this group of persons measured in accordance with IAS 19 amounted to €324.0 (269.0) million, or €276.2 (214.9) million measured in accordance with German GAAP.

The following rule applies to Board of Management contracts entered into for the first term of office before August 5, 2009: the retirement pension to be granted after a member of the Board of Management leaves the Company is payable immediately if the member’s contract is not renewed by the Company, or when the member reaches the age of 63. Any remuneration received from other sources until the age of 63 is deductible from the benefit entitlement up to a certain fixed amount.

The following general rule applies to contracts for the first term of office of members of the Board of Management entered into after August 5, 2009: the retirement pension to be granted after a member of the Board of Management leaves the Company is payable when the member reaches the age of 63.
EARLY TERMINATION BENEFITS

If the appointment to the Board of Management is terminated for cause through no fault of the Board of Management member, the claims under Board of Management contracts entered into since November 20, 2009 are limited to a maximum of two years’ remuneration, in accordance with the recommendation in section 4.2.3(4) of the Code (severance payment cap). For Board of Management members who are commencing their third or later term of office, existing rights under contracts entered into before November 20, 2009 are grandfathered.

No severance payment is made if the appointment to the Board of Management is terminated for good reason for which the Board of Management member is responsible. The members of the Board of Management are also entitled to a pension and to a surviving dependents’ pension as well as the use of company cars for the period in which they receive their pension in the event of early termination of their service on the Board of Management.

Please refer to notes 43 and 46 to the consolidated financial statements and the notes to the annual financial statements of Volkswagen AG for more detailed individual disclosures relating to members of the Board of Management who left the Company in fiscal year 2018.

1 The amount is reported in the total amount for defined benefit plans reported in the balance sheet (see note 29 to the consolidated financial statements).
SUPERVISORY BOARD REMUNERATION
Following its regular review of Supervisory Board remuneration, the Supervisory Board proposed a reorganization of the system of Supervisory Board remuneration to the 2017 Annual General Meeting, which was approved on May 10, 2017 with 99.98% of the votes cast. The remuneration of the members of the Supervisory Board of Volkswagen AG is comprised entirely of non-performance-related remuneration components. Remuneration for supervisory board work at subsidiaries continues in part to comprise a mix of non-performance-related and performance-related components.

The following applies to members of the Supervisory Board of Volkswagen AG with effect from January 1, 2017:

- Members of the Supervisory Board receive fixed remuneration of €100,000 per fiscal year.
- The Chairman of the Supervisory Board receives fixed remuneration of €300,000, while the Deputy Chairman receives remuneration of €200,000.
- For their work in the Supervisory Board committees, the members of the Supervisory Board also receive additional fixed remuneration of €50,000 per committee per fiscal year provided the committee met at least once per year for the performance of its duties. Memberships of the Nomination and Mediation Committees established in accordance with section 27(3) of the Mitbestimmungsgesetz (MitbestG – German Codetermination Act) are not taken into account.
- Committee chairpersons receive double this amount, while deputy chairpersons receive one-and-a-half times the committee remuneration listed above.
- Membership of no more than two committees is taken into account, whereby the two functions with the highest remuneration are counted if this maximum number is exceeded.
- Supervisory Board members who belonged to the Supervisory Board or one of its committees for only part of the fiscal year receive proportionate remuneration.
- Supervisory Board members receive an attendance fee of €1,000 for attending a meeting of the Supervisory Board or one of its committees; if several meetings are held on one day, the attendance fee is paid only once.
- The remuneration and attendance fees are each payable after the end of the fiscal year.

In fiscal year 2018, the members of the Supervisory Board received €4,538,986 (3,786,839). Of this figure, €2,297,500 related to the work of the Supervisory Board and €936,389 related to the work in the committees.

Disclosures Required Under Takeover Law

This section contains the Volkswagen Group’s disclosures relating to takeover law required by sections 289a(1) and 315a(1) of the HGB.

CAPITAL STRUCTURE
Volkswagen AG’s share capital amounted to €1,283,315,873.28 (€1,283,315,873.28) on December 31, 2018. It was composed of 295,089,818 ordinary shares and 206,205,445 preferred shares. Each share conveys a notional interest of €2.56 in the share capital.

SHAREHOLDER RIGHTS AND OBLIGATIONS
The shares convey pecuniary and administrative rights. The pecuniary rights include in particular the shareholders’ right to participate in profits (section 58(4) of the Aktiengesetz (AktG – German Stock Corporation Act)), the right to participate in liquidation proceeds (section 271 of the AktG) and preemptive rights to shares in the event of capital increases (section 186 of the AktG) that can be disapproved by the Annual General Meeting with the approval of the Special Meeting of Preferred Shareholders, where appropriate. Administrative rights include the right to attend the Annual General Meeting to speak there, to ask questions, to propose motions and to exercise voting rights. Shareholders can enforce these rights in particular through actions seeking disclosure and actions for avoidance.

Each ordinary share grants the holder one vote at the Annual General Meeting. The Annual General Meeting elects shareholder representatives to the Supervisory Board and elects the auditors; in particular, it resolves on the appropriation of net profit, formally approves the actions of the Board of Management and the Supervisory Board, and resolves on amendments to the Articles of Association of Volkswagen AG, capitalization measures and authorizations to purchase treasury shares; if required, it also resolves on the performance of a special audit, the removal before the end of their term of office of Supervisory Board members elected at the Annual General Meeting and the winding-up of the Company.

Preferred shareholders generally have no voting rights. However, in the exceptional case that they are granted voting rights by law (for example, when preferred share dividends were not paid in one year and not compensated for in full in the following year), each preferred share also grants the holder one vote at the Annual General Meeting. Furthermore, preferred shares entitle the holder to a €0.06 higher dividend than ordinary shares (further details on this right to preferred and additional dividends are specified in Article 27(2) of the Articles of Association of Volkswagen AG).

The Gesetz über die Überführung der Anteilsrechte an der Volkswagenwerk Gesellschaft mit beschränkter Haftung in private Hand (VW-Gesetz – Act on the Privatization of Shares of Volkswagenwerk Gesellschaft mit beschränkter Haftung) of July 21, 1960, as amended on July 30, 2009, includes various provisions in derogation of the German Stock Corporation Act, for example on the exercise of voting rights by proxy (section 3 of the VW-Gesetz) and on majority voting requirements at the Annual General Meeting (section 4(3) of the VW-Gesetz).

In accordance with the Volkswagen AG Articles of Association (Article 11(1)), the State of Lower Saxony is entitled to appoint two members of the Supervisory Board of Volkswagen AG for as long as it directly or indirectly holds at least 15% of Volkswagen AG’s ordinary shares. In addition, resolutions by the Annual General Meeting that are required by law to be adopted by a qualified majority require a majority of more than four-fifths of the share capital of the Company represented when the resolution is adopted (Article 25(2)), regardless of the provisions of the VW-Gesetz.

SHAREHOLDINGS EXCEEDING 10% OF VOTING RIGHTS
Shareholdings in Volkswagen AG that exceed 10% of voting rights are shown in the notes to the annual financial statements of Volkswagen AG for as long as it directly or indirectly holds at least 15% of Volkswagen AG’s ordinary shares. The current notifications regarding changes in voting rights in accordance with the Wertpapierhandelsgesetz (WpHG – German Securities Trading Act) are also published on this website.
COMPOSITION OF THE SUPERVISORY BOARD
The Supervisory Board consists of 20 members, half of whom are shareholder representatives. In accordance with Article 11(1) of the Articles of Association of Volkswagen AG, the State of Lower Saxony is entitled to appoint two of these shareholder representatives for as long as it directly or indirectly holds at least 15% of the Company's ordinary shares. The remaining shareholder representatives on the Supervisory Board are elected by the Annual General Meeting.

The other half of the Supervisory Board consists of employee representatives elected by the employees in accordance with the Mitbestimmungsgesetz (MitbestG – German Codetermination Act). A total of seven of these employee representatives are Company employees elected by the workforce; the other three employee representatives are trade union representatives elected by the workforce.

The Chairman of the Supervisory Board is generally a shareholder representative elected by the other members of the Supervisory Board. In the event that a Supervisory Board vote is tied, the Chairman of the Supervisory Board has a casting vote in accordance with the MitbestG.

The goals for the composition of the Supervisory Board are described on page 60 of the Corporate Governance Report. Information about the composition of the Supervisory Board at the end of the reporting period can be found on pages 87 to 89 of this annual report.

STATUTORY REQUIREMENTS AND REQUIREMENTS OF THE ARTICLES OF ASSOCIATION WITH REGARD TO THE APPOINTMENT AND REMOVAL OF BOARD OF MANAGEMENT MEMBERS AND TO AMENDMENTS TO THE ARTICLES OF ASSOCIATION
The appointment and removal of members of the Board of Management are governed by sections 84 and 85 of the AktG, which specify that members of the Board of Management are appointed by the Supervisory Board for a maximum of five years. Board of Management members may be reappointed or have their term of office extended for a maximum of five years in each case. In addition, Article 6 of the Articles of Association of Volkswagen AG states that the number of Board of Management members is stipulated by the Supervisory Board and that the Board of Management must consist of at least three persons.

The Annual General Meeting resolves amendments to the Articles of Association (section 119(1) of the AktG). In accordance with section 4(3) of the VW-Gesetz as amended on July 30, 2009 and Article 25(2) of the Articles of Association of Volkswagen AG, Annual General Meeting resolutions to amend the Articles of Association require a majority of more than four-fifths of the share capital represented.

POWERS OF THE BOARD OF MANAGEMENT, IN PARTICULAR CONCERNING THE ISSUE OF NEW SHARES AND THE REPURCHASE OF TREASURY SHARES
According to German stock corporation law, the Annual General Meeting can authorize the Board of Management, for a maximum period of five years, to issue new shares. It can also authorize the Board of Management, for a maximum period of five years, to issue bonds on the basis of which new shares are to be issued. The Annual General Meeting also decides the extent to which shareholders have preemptive rights to the new shares or bonds. The maximum amount of authorized share capital or contingent capital available for these purposes is determined by Article 4 of the Articles of Association of Volkswagen AG, as amended.

At the Annual General Meeting on May 5, 2015, a resolution was passed authorizing the Board of Management, with the consent of the Supervisory Board, to increase the Company's share capital by a total of up to €179.2 million (corresponding to 70 million shares) on one or more occasions up to May 4, 2020 by issuing new nonvoting preferred shares against cash contributions.

Further details of the authorization to issue new shares and their permitted uses may be found in the notes to the consolidated financial statements on page 261.

MATERIAL AGREEMENTS OF THE PARENT COMPANY IN THE EVENT OF A CHANGE OF CONTROL FOLLOWING A TAKEOVER BID
A banking syndicate granted Volkswagen AG a syndicated line of credit amounting to €5.0 billion that runs until April 2020. The syndicate members were granted the right to call their portion of the syndicated line of credit if Volkswagen AG is merged with a third party or becomes a subsidiary of another company. However, this call right does not apply in the event of a merger by absorption of Porsche Holding SE, one of its subsidiaries, or one of its holding companies and Volkswagen AG in which Volkswagen AG is the acquiring legal entity.
Diesel Issue

In agreement with the respective responsible authorities, the Volkswagen Group is making technical measures available worldwide for virtually all diesel vehicles with type EA 189 engines. The regulatory offense proceedings of the public prosecutor’s office in Braunschweig against Volkswagen AG, which began in April 2016, and that of the Munich II public prosecutor’s office against AUDI AG have both been concluded with orders imposing administrative fines.

Special items totaling €–3.2 billion had to be accounted for in fiscal year 2018.

IRREGULARITIES CONCERNING NOₓ EMISSIONS
On September 18, 2015, the US Environmental Protection Agency (EPA) publicly announced in a “Notice of Violation” that irregularities in relation to nitrogen oxide (NOₓ) emissions had been discovered in emissions tests on certain vehicles of Volkswagen Group with type 2.0 l diesel engines in the USA. In this context, Volkswagen AG announced that noticeable discrepancies between the figures achieved in testing and in actual road use had been identified in around eleven million vehicles worldwide with type EA 189 diesel engines. On November 2, 2015, the EPA issued a “Notice of Violation” alleging that irregularities had also been discovered in the software installed in US vehicles with type V6 3.0 l diesel engines.

Numerous court and governmental proceedings were subsequently initiated in the USA and the rest of the world. We have since succeeded in making substantial progress and ending a great number of these proceedings. Detailed information on the pending court and governmental proceedings can be found in the Report on Risks and Opportunities, starting on page 177.

EXTENSIVE INVESTIGATIONS INITIATED BY THE VOLKSWAGEN GROUP
After the first “Notice of Violation” was issued, Volkswagen AG immediately initiated its own internal as well as external investigations; both have since been concluded for the most part.

The Supervisory Board of Volkswagen AG formed a special committee that coordinates this board’s activities relating to the diesel issue on its behalf.

Furthermore, in September 2015 Volkswagen AG and AUDI AG filed a criminal complaint in Germany against unknown persons. Volkswagen AG and AUDI AG are cooperating with all relevant authorities.

The regulatory offense proceedings of the public prosecutor’s office in Braunschweig against Volkswagen AG, which began in April 2016, and the regulatory offense proceedings of the Munich II public prosecutor’s office against AUDI AG have both been concluded with administrative fine orders.

Work in respect of the legal proceedings that are still pending in the USA and the rest of the world is ongoing, still requires considerable efforts, and will continue for some time. Volkswagen AG is being advised by a number of external law firms in this connection.

The diesel issue is rooted in a modification of parts of the software of the relevant engine’s control units – which, according to Volkswagen AG’s legal position, is only unlawful under US law – for the type EA 189 diesel engines that Volkswagen AG was developing at that time. The decision to develop and install this software function was taken in late 2006 below Board of Management level. None of the members of the Board of Management had, at that time and for many years to follow, knowledge of the development and implementation of this software function.

In the months following publication of a study by the International Council on Clean Transportation in May 2014, Volkswagen AG’s Powertrain Development department checked the test set-ups on which the study was based for plausibility, confirming the unusually high NOₓ emissions from certain US vehicles with type EA 189 2.0 l diesel engines. The California Air Resources Board (CARB) – a part of the environmental regulatory authority of California – was informed of this result, and, at the same time, an offer was made to recalibrate the engine control unit software of type
EA 189 diesel engines in the USA as part of a service measure that was already planned in the USA. This measure was evaluated and adopted by the Ausschuss für Produkt sicherheit (APS – Product Safety Committee), which initiates necessary and appropriate measures to ensure the safety and conformity of Volkswagen AG’s products that are placed in the market. There are no findings that an unlawful “defeat device” under US law was disclosed to the APS as the cause of the discrepancies or to the persons responsible for preparing the 2014 annual and consolidated financial statements. Instead, at the time the 2014 annual and consolidated financial statements were being prepared, the persons responsible for preparing the 2014 annual and consolidated financial statements remained under the impression that the issue could be solved with comparatively little effort as part of a service measure.

In the course of the summer of 2015, however, it became successively apparent to individual members of Volkswagen AG’s Board of Management that the cause of the discrepancies in the USA was a modification of parts of the software of the engine control unit, which was later identified as an unlawful “defeat device” as defined by US law. This culminated in the disclosure of a “defeat device” to EPA and CARB on September 3, 2015. According to the assessment at that time of the responsible persons dealing with the matter, the scope of the costs expected by the Volkswagen Group (recall costs, retrofitting costs and financial penalties) was not fundamentally dissimilar to that of previous cases involving other vehicle manufacturers, and, therefore, appeared to be controllable overall with a view to the business activities of the Volkswagen Group. This assessment by the Volkswagen Group was based, among other things, on the advice of a law firm engaged in the USA for approval issues, according to which similar cases in the past were resolved amicably with the US authorities. The publication of the “Notice of Violation” by the EPA on September 18, 2015, which, especially at that time, came unexpectedly to the Board of Management, then presented the situation in an entirely different light.

Extensive inquiries were also conducted at AUDI AG in relation to the potential use of unlawful “defeat devices” under US law in the type V6 3.0 l diesel engines and concluded for the most part.

The AUDI AG Board of Management members in office back at the relevant time have stated that they had no knowledge of the use of unlawful “defeat device” software under US law in the type V6 3.0 l TDI engines until they were informed by the EPA in November 2015.

Within the Volkswagen Group, Volkswagen AG has development responsibility for the four-cylinder diesel engines such as the type EA 189, and AUDI AG has development responsibility for the six- and eight-cylinder diesel engines such as the type V6 3.0 l and V8 diesel engines.

AFFECTED VEHICLES IN THE EU/REST OF WORLD

With the exception of the USA and Canada, around ten million vehicles with type EA 189 diesel engines were affected worldwide.

In agreement with the respective responsible authorities, the Volkswagen Group is making technical measures available worldwide for virtually all diesel vehicles with type EA 189 engines.

AUDI AG has worked intensively for many months to check all relevant diesel concepts for possible discrepancies and retrofit potentials. The measures proposed by AUDI AG have been adopted and mandated in various recall notices issued by the Kraftfahrt-Bundesamt (KBA – German Federal Motor Transport Authority) for vehicle models with V6 and V8 TDI engines.

AFFECTED VEHICLES IN THE USA/CANADA

In the USA and Canada three generations of certain vehicles with 2.0 l TDI engines and two generations of certain vehicles with the type V6 3.0 l TDI engines are affected, which come to a total of approximately 700 thousand vehicles. Due to NOx limits that are considerably stricter than in the EU and the rest of the world, it is a greater technical challenge here to retrofit the vehicles so that the emission standards defined in the settlement agreements for these vehicles can be achieved.

In the USA, in fiscal year 2018, the EPA and CARB issued the outstanding official approvals needed for the technical solutions for the affected vehicles with 2.0 l TDI and with V6 3.0 l TDI engines. In the case of 2.0 l Generation 2 diesel vehicles with manual transmissions, Volkswagen Group of America, Inc. elected to withdraw the approved emissions modification proposal, whereby owners were given the option of a buyback and lessees were given the option of early lease termination.
**LEGAL RISKS**

Various legal risks are associated with the diesel issue. The provisions recognized for the diesel issue and the contingent liabilities disclosed as well as the other latent legal risks are in part subject to substantial estimation risks given that the fact finding efforts have not yet been concluded, the complexity of the individual relevant factors and the ongoing coordination with the authorities. Should these legal or estimation risks materialize, this could result in further considerable financial charges.

There are no conclusive findings or assessments of facts available to the Board of Management of Volkswagen AG that would suggest that a different assessment of the associated risks (e.g., investor lawsuits) should have been made. A detailed description of these and other risks arising from the diesel issue can be found in the Report on Risks and Opportunities starting on page 177.

**OPERATING RESULT**

Special items recognized in operating profit relating to the diesel issue amounted to €–3.2 (–3.2) billion in fiscal year 2018 and were mainly attributable to the legally final administrative fine orders imposed by the public prosecutor’s office in Braunschweig against Volkswagen AG (€1.0 billion) and by the Munich II public prosecutor’s office against AUDI AG (€0.8 billion), higher legal risks and legal defense costs, as well as higher expenses for technical measures.

The diesel issue led to total special items of €–29.0 billion in the years 2015 to 2018.
Business Development

The robust growth of the global economy continued in fiscal year 2018 with a slight decrease in momentum. Global demand for vehicles was somewhat lower than in the previous year. Amid persistently challenging market conditions, the Volkswagen Group delivered 10.8 million vehicles to customers.

Developments in the Global Economy

The global economy sustained its robust growth in 2018 with a slight decrease in momentum: global gross domestic product (GDP) rose by 3.2 (3.3)%. Economic momentum nearly matched the prior-year level both in advanced economies and emerging markets. With interest rates remaining comparatively low and prices for energy and other commodities rising year-on-year on the whole, consumer prices continued to increase worldwide. Growing upheaval in trade policy at international level and geopolitical tensions led to much greater uncertainty.

Europe/Other Markets

The solid GDP growth in Western Europe slowed to 1.8 (2.3)% as the year went on. The rate of change in the majority of countries in this region decreased compared with the previous year. The Brexit negotiations between the United Kingdom and the European Union (EU), which continued for the entire year, generated uncertainty, as did the related question of what form this relationship would take in the future. The unemployment rate in the eurozone continued to decrease, falling to an average of 8.1 (9.0)%, though rates remained considerably higher in Greece and Spain.

At 2.9 (4.0)%, the Central and Eastern Europe region also recorded a slower growth rate in the reporting period than in the previous year. While the comparatively high level of GDP growth in Central Europe slowed down on the whole, economic growth in Eastern Europe remained unchanged. Higher prices for energy and other commodities led to further stabilization of the economic situation in the countries from this region that export raw materials. Russia’s economy improved somewhat with a growth rate of 1.6 (1.5)%.

Growth in the Turkish economy slumped substantially to 2.5 (7.3)% after the first half of 2018. South Africa’s GDP rose by just 0.7 (1.3)% in the reporting period, down on the already low figure for the previous year. Ongoing structural deficits, social unrest and political challenges weighed on the economy.

Germany

Germany’s GDP continued to grow in 2018 on the back of the good labor market, however, momentum diminished year-on-year to 1.5 (2.5)%.

North America

Economic growth in the USA picked up in the reporting period, reaching 2.9 (2.2)%. The economy was supported mainly by domestic consumer demand. The unemployment rate in the United States in 2018 was at 3.9 (4.3)%. Based on the stable situation in the labor market and the expected inflation trend, the US Federal Reserve successively raised its key interest rate. The US dollar gained strength against the euro in the course of the year. In neighboring Canada and Mexico, GDP grew at a slower rate than in the previous year, at 2.1 (3.0)% and 2.2 (2.3)%, respectively.
South America
Brazil’s economy once again recorded slight growth, at 1.4 (1.1)%. However, the situation in South America’s largest economy remained tense due to political uncertainty, among other factors. The economic situation in Argentina deteriorated increasingly as the year went on. The country was in recession amid persistently high inflation: GDP fell by 1.7 (+2.9)%. In view of this difficult situation, the Argentine government requested financial aid from the International Monetary Fund.

Asia-Pacific
China’s economy recorded a growth rate of 6.6 (6.9)% in 2018, but its rate of expansion was not quite as strong as in the previous year. The Chinese government responded to the trade disputes with the United States by stepping up state support measures. The Indian economy continued its positive trend, with growth in the reporting period of 7.2 (6.7)%. However, the pace of growth tapered off in the course of the year. Japan’s GDP grew by only 0.8 (1.9)%.

Central and Eastern Europe as well as in South America was offset by declining volumes in the Asia-Pacific, Middle East, North America and Western Europe regions.

Sector-specific environment
The sector-specific environment was influenced significantly by fiscal policy measures, which contributed considerably to the mixed trends in sales volumes in the markets last year. These measures included tax cuts or increases, incentive programs and sales incentives, as well as import duties.

In addition, non-tariff trade barriers to protect the respective domestic automotive industry made the movement of vehicles, parts and components more difficult.

Europe/Other Markets
In Western Europe, the total number of new passenger car registrations in the reporting period was down 0.7% in total on the prior-year figure, at 14.2 million. The continuing strong macroeconomic environment, positive consumer sentiment and low interest rates generated a slight increase in the first half of the year. The changeover to the new WLTP (Worldwide Harmonized Light-Duty Vehicles Test Procedure) as of September 1, 2018 led to pull-forward effects in the months of July and August and to significant declines from September until December in some cases. New vehicle registrations were mixed in the largest single markets. Spain (+7.0%) and France (+3.0%) continued to record increases. Both countries benefited from a buoyant macroeconomic
In Italy, falling demand from both private and commercial customers put a damper on market development (−3.1%), among other things, as a consequence of the political uncertainty during and after the formation of government. The UK passenger car market saw a continuation of the negative trend from the previous year (−6.8%). This was due, among other things, to the uncertain outcome of the Brexit negotiations with the EU. The share of diesel vehicles (passenger cars) in Western Europe slipped to 36.4 (44.4)% in the reporting year.

In the Central and Eastern Europe region, the market volume of passenger cars in fiscal year 2018 rose markedly by 11.0% year-on-year to 3.4 million vehicles. New passenger car registrations in the EU member states of Central Europe increased further by 8.0% to 1.4 million units. Passenger car sales in Eastern Europe also achieved a double-digit growth rate (+13.1%), starting from a low level. The Russian market was the main growth driver in the region with an increase of 13.2%. This was mainly attributable to government programs to promote sales as well as to pull-forward effects resulting from a value-added tax increase entering into force on January 1, 2019.

The Turkish passenger car market recorded a substantial drop in demand of 32.7%, largely due to the rapidly deteriorating macroeconomic situation. In South Africa (−0.1%), the number of new passenger car registrations in the reporting period stayed at the comparatively low level seen in recent years. The change in political environment as a result of the new presidency had little positive impact on the overall economy and the automotive market.

**Germany**

Amounting to 3.4 million units (−0.2%) in the reporting period, passenger car registrations in Germany sustained the previous year’s high level. This was attributable not only to the buoyant macroeconomic environment but also to manufacturer discounts in the form of trade-in and scrapping bonuses for older diesel models as well as to an environmental bonus for electric-powered vehicles (all-electric and plug-in hybrid drives). The changeover to the WLTP test procedure as of September 1, 2018, which limited model availability in some cases, in total led to a slightly declining overall market, whereas the rise in new registrations for private customers (+2.0%) in particular had a positive effect.

Domestic production and exports once again fell short of the comparable prior-year figures in 2018: passenger car production decreased by 9.3% to 5.1 million vehicles, while passenger car exports fell by 8.9% to 4.0 million units. This was primarily caused by declining volumes in Europe resulting to some extent from the changeover to the WLTP.
North America
At 20.7 million vehicles, sales of passenger cars and light commercial vehicles (up to 6.35 tonnes) in the North America region in fiscal year 2018 did not match the high prior-year figure (–0.6%). In the US market, demand was almost flat on the 2017 level at 17.3 million units (+0.2%). A favorable labor market and the greater purchasing power of consumers largely compensated for increased financing costs resulting from higher interest rates. The shift in demand from traditional passenger cars (–13.5%) to light commercial vehicles such as SUVs and pickup models (+8.1%) also continued in the reporting period. Due to sales figures, which had declined since the second quarter, the Canadian automotive market remained below the record figure of the previous year (–2.6%). In Mexico, sales of passenger cars and light commercial vehicles fell short of the prior-year figure (–6.6%) for the second year in a row.

South America
In the markets of the South America region, the recovery continued in the reporting period – starting from a low level – with demand for passenger cars and light commercial vehicles rising by 6.2% to 4.5 million units. The main driver was the Brazilian automotive market, whose 13.8% growth outperformed the strong momentum of the preceding year. However, the market volume was still around a third lower than the record figure for 2012. Brazil’s vehicle exports declined to 629 thousand units in the course of 2018, a decrease of 17.9% on the previous year’s record high. Particularly from mid-year onwards, exports were impacted by the market trend in Argentina, where demand slumped on account of the progressive deterioration of the macroeconomic situation (–10.4%).

Asia-Pacific
After many years of uninterrupted growth, the market volume in the Asia-Pacific region decreased by 2.3% in fiscal year 2018 to 36.1 million units. This was mainly due to the weakness of the Chinese passenger car market (–4.6%). The trade dispute between China and the United States of America in the reporting period weighed on business and consumer confidence, among other things, and led to a marked decline in demand, especially in the second half of the year. By contrast, the Indian market continued growing and achieved a new record with a 4.8% increase in passenger car sales year-on-year. Alongside attractive financing products, the positive trend continued to profit from the goods and services tax introduced on July 1, 2017, which resulted in part in improved purchasing conditions for the consumer. The Japanese passenger car market almost matched the volumes recorded in the previous year (–0.4%).

TRENDS IN THE MARKETS FOR COMMERCIAL VEHICLES
Overall demand for light commercial vehicles in fiscal year 2018 was slightly lower than in the previous year. A total of 9.0 (9.2) million vehicles were registered worldwide.

Despite the uncertain outcome of the Brexit negotiations between the EU and the UK, new registrations in Western Europe were up 2.8% to 2.0 million units. In Germany, the comparative figure for 2017 was exceeded by 6.0%. The market in Spain grew distinctly and the market in France recorded moderate growth, while Italy and the United Kingdom registered a decline.

The markets in Central and Eastern Europe grew noticeably on the whole, with 352 (324) thousand light commercial vehicle registrations including 130 (124) thousand in Russia alone. Most of the markets in this region succeeded in maintaining or exceeding their prior-year results.

In North and South America, the light vehicle market is reported as part of the passenger car market, which includes both passenger cars and light commercial vehicles.

Registration volumes of light commercial vehicles in the Asia-Pacific region decreased to 6.0 million units (–2.7%) in the reporting period. In China, the region’s dominant market and the largest market worldwide, demand for light commercial vehicles of 3.0 million units was down 12.0% on the prior-year figure. This decline is mainly due to the shift in demand for micro vans towards more cost-effective MPVs and SUVs. As a consequence of the sustained economic growth, new registrations in India increased sharply compared to 2017; here, 710 (575) thousand new units were registered. The market volume in Japan rose by 3.2% to 770 thousand vehicles. The number of new vehicle registrations in Thailand and Indonesia saw a significant increase versus the previous year.

Global demand for mid-sized and heavy trucks with a gross weight of more than six tonnes in the markets that are relevant for the Volkswagen Group was higher in fiscal year 2018 than in the previous year, with 591 thousand new vehicle registrations (+6.6%).

In Western Europe, the number of new truck registrations exceeded the prior-year figure by 2.2% at a total of 297 thousand vehicles. In Germany, Western Europe’s largest market, the previous year’s level was also exceeded slightly. While demand in the United Kingdom and in Spain witnessed a decline, it rose in France and Italy.

The Central and Eastern Europe region saw demand rise by 6.0% to 169 thousand units on the back of the positive economic performance. The Russian market deteriorated as the year progressed and recorded only slight year-on-year growth over the year as a whole. New registrations there increased by 2.6% to 78 thousand vehicles.
In fiscal year 2018, the market volume in South America rose compared with the previous year. Here, the number of new vehicle registrations rose by 19.5% to 125 thousand units. In Brazil, the region’s largest market, demand for trucks grew very sharply compared with the relatively low figure for the prior-year period as a consequence of the economic recovery. By contrast, Argentina saw new registrations fall by more than a quarter. This was due to weak economic performance with a related weakening of the peso and rising interest rates.

Demand for buses in the markets that are relevant for the Volkswagen Group was slightly higher than in the previous year. The markets in Brazil as well as in Central and Eastern Europe contributed in particular to this growth. Demand in Western Europe was slightly down on the previous year’s level.

**TRENDS IN THE MARKETS FOR POWER ENGINEERING**

The markets for power engineering are subject to differing regional and economic factors. Consequently, their business growth trends are mostly independent of each other.

The marine market remained at the previous year’s low level in 2018. Steady demand in merchant shipping was largely based on orders of container ships and LNG carriers. Demand for cruise ships, passenger ferries, fishing vessels and dredgers also remained steady. The special market for government vessels also continued on a stable trajectory. The existing overcapacity in the market continued to curb investment in offshore oil production and thus in new ship construction in this segment. Planned tighter emission standards resulted in a positive trend toward gas-powered or dual fuel-engined ships. China, South Korea and Japan remained the dominant shipbuilding countries, accounting for a global market share of more than 85% measured in terms of the number of ships. Because market volumes are still low, all segments in the marine market are continuing to experience significant competitive pressure and a sharp drop in prices as a result.

The market for power generation showed a slight recovery compared with the previous year. Higher demand was registered in all areas of application, for gas in particular. This confirms the shift away from oil-fired power plants towards dual-fuel and gas-fired power plants. Demand for energy solutions remained high, with a strong trend towards greater flexibility and decentralized availability. The economies of key emerging markets recovered somewhat. However, continued strong pressure from competition and pricing was discernible in all projects, having a negative impact on the earnings quality of orders. Furthermore, order placement was often delayed due to persistently difficult financing conditions for customers, particularly on larger projects.

In 2018, the market for turbomachinery improved somewhat year-on-year. Demand for turbo compressors in the raw materials, oil, gas and processing industry increased slightly but remained volatile owing to political uncertainty. The steam and gas turbine business continued to be dominated by overcapacity on the part of electricity producers; however, signs pointed towards a slight recovery, especially in regions with a low level of electrification. Although pressure from competition and pricing was somewhat lower than in the prior-year period, the overall level remained high due to existing overcapacity and market volatility.

The marine and power plant after-sales business for diesel engines performed positively overall and benefited from a continued increase in interest in long-term maintenance contracts and retrofit solutions. The after-sales market for turbomachinery remained under pressure, impacted by a price war and competition to improve efficiency. It is recovering, but only slowly.

**TRENDS IN THE MARKET FOR FINANCIAL SERVICES**

Demand for automotive financial services was once again high in 2018 in a slightly shrinking overall market. Service products such as maintenance and servicing agreements or insurance were especially popular, as customers in more advanced automotive financial services markets are putting their focus on optimizing total cost of ownership. In the fleet segment, some customers elicited the support of automotive financial service providers in order to optimize their entire mobility management beyond mere fleet operation. There was also increased demand from both private and business customers for mobility services centered on vehicle usage rather than on ownership.

In Europe, sales of financial services climbed further in the reporting period, strengthened by higher vehicle sales and strong growth in financing agreements and leases. The used-vehicle market expanded, particularly in Western and Central Europe. Demand for after-sales products such as servicing, maintenance and spare parts agreements as well as automotive-related insurance also developed positively. Automotive financial services products enjoyed rising popularity, particularly in Spain and Italy, while in the United Kingdom and France demand for financial services remained high.

In the German market, the share of loan-financed or leased vehicles remained stable at a high level in 2018. Along-
side traditional products, integrated mobility services in the business customer segment and after-sales products were particularly popular.

In South Africa, demand for automotive financial services products was stable.

Sales of automotive financial services in North America remained at a high level in the past fiscal year. In the USA, the overall market for financial services products once again performed well; above all, demand for leasing through captive financial services products was consistently high. Automotive financial services products were also popular in Mexico.

Brazil continued to witness a recovery in 2018 despite the political tensions. Sales of vehicle financing arrangements and the country-specific financial services product Consorcio, a lottery-style savings plan, as well as of insurance and other services rose in the reporting period. The current economic crisis in Argentina brought the positive trend seen in 2017 to a halt. Due to the sharp rise in interest rates, sales of financing and leasing products proved challenging in 2018, though the situation stabilized somewhat at the end of the year.

The markets in the Asia-Pacific region turned in a mixed performance during the reporting period. In China, the proportion of loan-financed vehicle purchases rose. Despite increasing restrictions on registrations in metropolitan areas, there is considerable potential to acquire new customers for automotive-related financial services, particularly in the interior of the country. Demand for automotive financial services rose in the Indian market. It was stable on the whole in Japan and South Korea. In Australia, amid a slight downturn in the vehicle market, demand for financial services products remained high.

In the commercial vehicle segment, the European market for financial services again performed well; demand for these products was also high in China. The economic situation in Brazil stabilized and the truck and bus business and the related financial services market developed encouragingly.

**NEW GROUP MODELS IN 2018**

The Volkswagen Group launched a large number of attractive new models on the market in fiscal year 2018. The current product portfolio comprises 365 models. It covers almost all key segments and body types, with offerings from small cars to super sports cars in the passenger car segment, and from pickups to heavy trucks and buses in the commercial vehicles segment, as well as motorcycles.

The Volkswagen Passenger Cars brand continued its global product initiative in the past year. The new Touareg plays a leading role in the premium SUV segment with its expressive design, its equipment and the high-quality materials and craftsmanship. The rollout of the new Polo GTI and the up! GTI put two models on the market that are distinguished in particular by their driving dynamics and sportiness. In China, a total of four new SUV models were launched, including the compact, sporty T-Roc. Further successors to important volume models were also introduced: the Lavida, Bora and Passat NMS. Added to these were other plug-in hybrid models brought out to meet the growing demand for new energy vehicles in China. In the USA, the new Jetta came on the market. The latest generation of the US bestseller, which is now also based on the Modular Transverse Toolkit, is quite different from its predecessor, both visually and from a technological perspective. South America celebrated the rollout of the Virtus, a hatchback saloon based on the Polo; the further rejuvenation and expansion of the product range is an important element of the brand’s realignment in this region.

The Audi brand launched a successor model in each of its A6 and A7 premium series. Since 2018, the sporty Q8 SUV has been the top model in the Q family. The second model generations of the compact A1 and Q3 model series each celebrated their premieres. All vehicles are winning over customers in their respective segments with a brand-new virtual cockpit architecture, a large number of innovative driver assistance systems and Audi’s characteristic dynamism.

ŠKODA launched its revamped compact Fabia model in the reporting period, which impresses in particular with a more modern exterior. In China, the brand rolled out its third SUV, the Kamiq. It features a spacious interior, emotional design and connectivity solutions. With the Kodiaq GT, the dynamic coupé version of the popular SUV, ŠKODA is presenting its new flagship, which will be offered exclusively in the Chinese market.

The SEAT brand continued its SUV product initiative in 2018 and unveiled the seven-seater Tarraco. The model fits perfectly into the Spanish brand’s SUV model range alongside the smaller Arona and Ateca models. In addition, SEAT established the new sporty CUPRA line and included the dynamic CUPRA Ateca in its range at the end of the year.

After rolling out the new Cayenne in the European market in 2017, Porsche launched this model in the United States, China and other countries during the reporting period. In addition, the product range was supplemented by the Cayenne E-Hybrid. The GTS models of the 718 Boxster and Cayman were also delivered to overseas markets in 2018 for the first time. The 911 GT3 RS, which was likewise launched in 2018, impressed customers with its dynamics. The new Macan came on the Chinese market in the fall and subsequently on the European market at the end of the year.
Furthermore, the Panamera model range was expanded by the addition of the GTS models.

In 2018, Bentley again set standards in the luxury grand tourer segment with the third generation of the Continental GT. Moreover, the brand expanded its successful Bentayga series by adding the powerful Bentayga V8.

Lamborghini established a third series with the Urus super-SUV, significantly expanding its customer base. The Huracán Performante Spyder was also introduced to the market.

Bugatti offered additional options for its super sports car, the Chiron, including the Sky View glass roof.

Since 2018, Volkswagen Commercial Vehicles has been offering the Amarok with a new top-of-the-range V6 TDI engine. The battery-electric e-Crafter is the brand’s first zero-emission van and has been specially designed for couriers, express and parcel delivery services.

In the reporting period, Scania presented a plug-in hybrid drive that allows fuel savings of up to 15% for its latest generation of trucks. Furthermore, the first long-distance truck with an efficient LNG drive and a range of up to 1,000 km was unveiled.

MAN celebrated the rollout of its fully electric eTGE in 2018. The van has a range of around 160 km, which makes it particularly suitable for inner-city distribution logistics. With the XLION special edition, MAN introduced special equipment packages for long-distance, distribution and traction trucks. In the bus sector, MAN presented the new Lion’s City G city bus with a newly developed CNG gas-powered engine.

In 2018, Ducati launched numerous new models on the market, including the Scrambler 1100, the Monster 821, the Multistrada 1260, the 959 Panigale Corse and the Panigale V4.

1. Deliveries for 2017 have been updated to reflect subsequent statistical trends. The figures include the Chinese joint ventures.

During the reporting period, deliveries of passenger cars to Volkswagen Group customers worldwide rose to 10,101,297 units amid difficult conditions in some countries in Western Europe – mainly as a result of the changeover to the WLTP – and in the Chinese market, which was impacted by macro-economic uncertainty. This was an increase of 62,541 vehicles or 0.6% on the previous year. The Group’s new SUV models made a particular contribution to this rise. As the passenger car market as a whole declined by 1.2% in the same period, the Volkswagen Group’s share of the global market rose to 12.3 (12.0)%. The largest increases in volume in absolute terms were seen in Brazil and Russia. Sales figures were down on the previous year in Germany, the United Kingdom, Mexico and Turkey, among other countries. The Volkswagen Passenger Cars, ŠKODA, SEAT, Porsche and Lamborghini brands delivered record numbers of vehicles. The brands that experienced the largest growth in absolute terms were ŠKODA and SEAT; Audi and Bentley fell short of the respective prior-year levels.

The table on page 104 gives an overview of passenger car deliveries to customers of the Volkswagen Group in the regions and the key individual markets. The demand trends for Group models in these markets and regions are described in the following sections.

### Deliveries in Europe/Other markets

In the reporting period, the passenger car market as a whole in Western Europe fell 0.7% short of the prior-year figure. With 3,138,419 vehicles delivered to customers, the Volkswagen Group reached the level seen in the previous year (-0.6%) despite a considerable drop in the second half of the year resulting from the changeover to the WLTP. Other adverse effects were attributable to the fact that customer confidence has not yet been fully restored following the diesel issue and to customer uncertainty generated by the public discussion on driving bans for diesel vehicles. The ŠKODA Kodiaq, Porsche 911 and Porsche Cayenne saw
encouraging growth. Furthermore, the new Polo, T-Roc, Tiguan Allspace and Arteon models from the Volkswagen Passenger Cars brand, the ŠKODA Karoq and SEAT Arona were very popular. The Touareg from Volkswagen Passenger Cars was successfully launched in the market along with the Audi A1 Sportback, Audi Q3, Audi A6, Audi A7 Sportback, Audi Q8 and ŠKODA Fabia. The Group’s share of the passenger car market in Western Europe was 22.0 (22.0)%.

In the significantly growing passenger car markets in the Central and Eastern Europe region, the number of deliveries to Volkswagen Group customers in fiscal year 2018 rose by 6.8% year-on-year. Whereas in Russia and Poland demand for Group models grew strongly in some cases, the number of vehicles sold in the Czech Republic saw a decline. The Polo and the Tiguan from Volkswagen Passenger Cars along with the ŠKODA Rapid and Octavia were the models most in demand. The new T-Roc from Volkswagen Passenger Cars, the ŠKODA Karoq and the SEAT Arona were also very popular SUV models. The Volkswagen Group’s share of the passenger car market in Central and Eastern Europe was 21.2 (22.0)%.

In Turkey, the Volkswagen Group delivered 40.5% fewer vehicles than in the previous year in a substantially weaker overall market. In South Africa’s passenger car market, which was almost on a level with the previous year, demand for Volkswagen Group vehicles rose by 3.5%. The best-selling Group model in South Africa was the Polo.

Deliveries in Germany

In the reporting period, the German passenger car market matched the high prior-year level (–0.2%). The Volkswagen Group delivered 1,121,289 vehicles to customers in its home market, a slight decrease on the prior-year level (–0.9%). In addition to the decreases in the second half of the year caused by the changeover to the WLTP, the fact that customer confidence has not yet been fully restored following the diesel issue weighed on demand, as did customer uncertainty generated by the public discussion on driving bans for diesel vehicles. The Golf continued to top the list of the most popular passenger cars in Germany in terms of registrations. The Polo, Tiguan and Passat Estate from Volkswagen Passenger Cars were among the most popular Group models, as were the ŠKODA Kodiaq, ŠKODA Octavia Combi and Audi A4 Avant. The new Polo, T-Roc, Tiguan Allspace and Arteon models from the Volkswagen Passenger Cars brand, the ŠKODA Karoq and the SEAT Arona were also in high demand among customers. In the registration statistics of the Kraftfahrt-Bundesamt (KBA – German Federal Motor Transport Authority), seven Group models led their respective segments at the end of 2018: the up!, Polo, Golf, Tiguan, Touran, Passat, and Porsche 911.

**Deliveries in North America**

Demand for Volkswagen Group models in North America in the reporting period was 2.0% lower than the prior-year figure at 943,621 vehicles in a slightly declining overall passenger car and light commercial vehicle market. The Group’s market share was 4.6 (4.7)%. The new Jetta was successfully rolled out. Moreover, the Tiguan Allspace was the most sought-after Group model in North America.
In the US market, demand for Volkswagen Group models rose by 2.1% in fiscal year 2018 compared with the previous year. In this period, the market as a whole matched the prior-year level. Demand remained higher for models in the SUV and pickup segments than for conventional passenger cars. The Group models achieving the largest increases in absolute terms were the Audi Q5 and Audi A5 Sportback. In addition, the Jetta and the Porsche Macan as well as the new Tiguan Allspace and Atlas SUVs from the Volkswagen Passenger Cars brand were very popular among customers.

In Canada, demand for Group models in the reporting period increased by 3.7% year-on-year in a shrinking overall market. The Golf saloon, Jetta and Audi Q5 models and the new Tiguan Allspace and Atlas SUVs from the Volkswagen Passenger Cars brand were particularly popular.

In the Mexican market, which was declining on the whole, the Volkswagen Group delivered 16.4% fewer vehicles to customers compared with the previous year. The Vento, Jetta and Tiguan Allspace models recorded the highest demand.

Deliveries in South America
The South American market for passenger cars and light commercial vehicles continued its recovery path overall in the reporting year. In this region we delivered 497,820 vehicles to customers, 11.7% more than a year before. Among others, the Virtus, Jetta and Touareg from the Volkswagen Passenger Cars brand were successfully launched in the market along with the Audi Q3, Audi Q8 and Porsche Boxster. The Volkswagen Group’s share of the passenger car market in South America rose to 11.9 (11.4)%.

The Brazilian market also recovered further in the reporting period. The Volkswagen Group benefited from this development and delivered 27.1% more vehicles to customers there than in the previous year. Above all, demand was particularly high for the new Polo and Virtus models from the Volkswagen Passenger Cars brand. Demand for the Gol and Amarok models also developed encouragingly.

In Argentina, the Group recorded a 22.3% decline in sales year-on-year amid a considerably weaker overall market. The Gol and Amarok recorded the highest demand among Group models. The new Polo, Virtus and Tiguan Allspace models were also well received by customers.

Deliveries in the Asia-Pacific region
In 2018, the passenger car markets in the Asia-Pacific region registered their first decline in many years. Despite adverse effects from the Chinese market in particular, the Volkswagen Group handed over 4,503,791 units to customers here, 0.9% more vehicles than a year before. The Volkswagen Group’s market share in the Asia-Pacific region rose to 12.5 (12.1)%.

China, the world’s largest single market and the main growth driver of the Asia-Pacific region for many years, experienced a downturn in the reporting period. The Volkswagen Group increased sales here and delivered 0.5% more vehicles to customers in China than in the prior year. The models that achieved the largest growth in absolute terms were the Magotan from Volkswagen Passenger Cars, the Audi A4 and the Porsche Panamera. In addition, the new Phideon from Volkswagen Passenger Cars and the ŠKODA Octavia Combi were highly sought-after. The new Teramont and Tiguan Allspace SUVs from the Volkswagen Passenger Cars brand, the Audi Q5 and the ŠKODA Kodiaq were also very popular. The T-Roc, Tayron, Tharu, Bora, Lavida, Gran Lavida, Passat and Touareg models from Volkswagen Passenger Cars
as well as the Audi Q2 and ŠKODA’s Karoq and Kamiq models were successfully launched in the market.

The Indian passenger car market continued its growth in the reporting period. Demand for models from the Volkswagen Group fell by 15.4% in this period compared with the previous year. The Polo was the Group’s most sought-after model in India.

In Japan, the number of passenger cars delivered to Volkswagen Group customers exceeded the prior-year figure by 1.8%, while the total market volume remained on the prior-year level. The Polo and Audi Q2 models recorded promising increases in demand.

1 Deliveries for 2017 have been updated to reflect subsequent statistical trends. The figures include the Chinese joint ventures.
COMMERCIAL VEHICLE DELIVERIES

The Volkswagen Group delivered a total of 732,715 commercial vehicles to customers worldwide in 2018 (+4.3%). Trucks accounted for 202,492 (+10.4%) units and buses for 22,629 (+17.8%) units. Sales of light commercial vehicles increased by 1.5% year-on-year to 507,594 units.

In Western Europe, deliveries were up by 4.3% on the previous year at 445,081 vehicles; of this total, 344,034 were light commercial vehicles, 95,299 were trucks and 5,748 were buses. The Transporter and Caddy were the most sought-after Group models in the Western European markets.

We handed over 83,365 vehicles to customers in the markets in Central and Eastern Europe in the period from January to December 2018 (+9.6%); of this figure, 44,530 were light commercial vehicles, 37,400 were trucks and 1,435 were buses. The Transporter and the Caddy were the Group models experiencing the highest demand. In Russia, the region’s largest market, sales climbed in the wake of economic recovery by 12.4% year-on-year to 20,567 units.

In the Other markets, particularly in Turkey, deliveries of Volkswagen Group commercial vehicles fell by 15.8% to a total of 56,514 units: 38,271 light commercial vehicles, 14,491 trucks and 3,752 buses.

Deliveries in North America amounted to 13,074 vehicles (-2.5%), which were handed over almost exclusively to customers in Mexico. In this region, we handed over 9,567 light commercial vehicles, 1,256 trucks and 2,251 buses to customers.

The Volkswagen Group sold a total of 92,161 units (+21.3%) in South America. Of the units delivered, 44,417 were light commercial vehicles, 40,451 were trucks and 7,293 were buses. The Amarok was particularly popular. Following continued improvement in the economic climate, deliveries rose by 55.7% in Brazil; 17,739 light commercial vehicles, 32,903 trucks and 5,081 buses were handed over to customers here.

In the Asia-Pacific region, the Volkswagen Group sold 42,520 vehicles in the reporting period: 26,775 light commercial vehicles, 13,595 trucks and 2,150 buses. In total this was 2.2% less than in the previous year. The Transporter and the Amarok were the most popular Group models. In China, sales were on a level with the previous year at 10,353 vehicles (-0.5%). Of this total, 5,695 were light commercial vehicles, 4,247 were trucks and 411 were buses.

1 Deliveries for 2017 have been updated to reflect subsequent statistical trends.
DELIVERIES IN THE POWER ENGINEERING SEGMENT

Orders in the Power Engineering segment are usually part of major investment projects. Lead times typically range from just under one year to several years, and partial deliveries as construction progresses are common. Accordingly, there is a time lag between incoming orders and sales revenue from the new construction business.

Sales revenue in the Power Engineering segment was largely driven by Engines & Marine Systems and Turbomachinery, which together generated two-thirds of overall sales revenue.

ORDERS RECEIVED IN THE PASSENGER CARS SEGMENT IN WESTERN EUROPE

The temporary restrictions on the range of models on sale attributable to the introduction of the WLTP with effect from September 1, 2018 had a negative impact on the order situation in Western Europe in fiscal year 2018. Incoming orders in the reporting period were down 5.9% year-on-year. Developments in the key markets were mixed: while especially Germany and the United Kingdom registered a larger decline, incoming orders rose in Spain, France and Italy.

ORDERS RECEIVED FOR COMMERCIAL VEHICLES

Orders received for light commercial vehicles of the Volkswagen Group in Western Europe were 1.6% lower than in the previous year at 342,386 units.

Orders received for mid-sized and heavy trucks and buses increased by 3.5% year-on-year to 233,627 vehicles in 2018. In Western Europe, our main sales market, ongoing positive economic stimulus gave a boost to incoming orders. Orders received in South America were up in response to the economic recovery in Brazil.

ORDERS RECEIVED IN THE POWER ENGINEERING SEGMENT

The long-term performance of the Power Engineering business is determined by the macroeconomic environment. Individual major orders lead to fluctuations in incoming orders during the year that do not correlate with these long-term trends.

Orders received in the Power Engineering segment in 2018 amounted to €4.0 (3.7) billion. Engines & Marine Systems and Turbomachinery generated more than two-thirds of the order volume in a persistently difficult market environment. In the marine business, for example, orders came in for the supply of engines and exhaust gas treatment systems for seven new cruise ships with an aggregate output of 290 MW. In the power plant business, orders were won in Bangladesh for 36 engines with an aggregate output of 724 MW. In the area of turbomachinery, we received a follow-up order for the expansion of an underwater compressor station in the North Sea.

VOLKSWAGEN GROUP FINANCIAL SERVICES

The Financial Services Division includes the Volkswagen Group’s dealer and customer financing, leasing, banking and insurance activities, fleet management and mobility offerings. The division comprises Volkswagen Financial Services and the financial services activities of Scania and Porsche Holding Salzburg.

The Financial Services Division’s products and services remained very popular in fiscal year 2018. At 7.6 (7.3) million, the number of new financing, leasing, service and insurance contracts signed worldwide exceeded the comparable prior-year figure. The ratio of leased or financed vehicles to Group deliveries (penetration rate) in the Financial Services Division’s markets was 33.7 (33.4)% in the reporting period. As of December 31, 2018, the total number of contracts was 19.6 million, up 6.4% from the year before. The number of contracts in the customer financing/leasing area climbed 5.4% to 10.6 million, while it increased by 7.6% to 9.0 million in the service/insurance area.

In the Europe/Other markets region, the number of new contracts signed between January and December 2018 increased by 3.9% to 5.6 million. The penetration rate rose to 48.4 (47.6)%). At the end of the reporting period, the total number of contracts was 14.2 million, an increase of 6.0% as against December 31, 2017. The customer financing/leasing area accounted for 6.7 million contracts (+5.6%).

The number of contracts in North America as of December 31, 2018 increased to 2.9 million, 6.0% more than in the previous year. The customer financing/leasing area accounted for 1.9 million contracts (+5.6%). The number of new contracts signed amounted to 935 thousand, an increase of 7.0% versus the previous year. The ratio of leased or financed vehicles to Group deliveries in North America was 66.3 (60.5)%.

In South America, 236 (205) thousand new contracts were signed in the past fiscal year. The penetration rate increased to 29.1 (26.6)%). At the end of the reporting period, the total number of contracts was 487 thousand, 9.4% fewer than at the end of 2017. The contracts mainly related to the customer financing/leasing area.

In the Asia-Pacific region, the number of new contracts signed rose by 6.7% to 889 thousand units in 2018. The ratio of leased or financed vehicles to Group deliveries was 14.8 (16.1)%. On December 31, 2018, the total number of contracts amounted to 2.1 million, up 14.6% on the previous year. The customer financing/leasing area accounted for 1.6 million contracts (+8.3%).
SALES TO THE DEALER ORGANIZATION
The Volkswagen Group’s sales to the dealer organization increased by 1.1% to 10,899,869 units (including the Chinese joint ventures) in the reporting year. This was due to higher demand in Brazil, China and Central and Eastern Europe. Outside Germany, the unit sales volumes rose by 1.6%. Owing to the changeover to the WLTP test procedure, which took place in the third quarter of 2018, unit sales in Germany decreased by 2.2%. At 11.3 (11.7%), the proportion of the Group’s total sales accounted for by Germany was lower than in 2017.

The Polo, Tiguan, Golf, Lavida and Jetta were our biggest sellers last year. The largest increases in demand were recorded by the Polo, Tiguan, Atlas/Teramont and Phideon models from the Volkswagen Passenger Cars brand, the Audi Q5 and A8, as well as the ŠKODA Kodiaq and Karoq/Kamiq and the SEAT Arona. The Porsche Cayenne and the Crafter from the Volkswagen Commercial Vehicles brand also achieved a strong growth rate.

PRODUCTION
The Volkswagen Group produced 11,017,621 vehicles worldwide in fiscal year 2018, 1.3% more than in the previous year. In total, our Chinese joint ventures manufactured 1.9% more units than in the year before. In the German market, the production declined by 10.7%, which was largely WLTP-related. The percentage of the Group’s total production accounted for by Germany was lower than in 2017, at 20.9 (23.7)%.

INVENTORIES
Global inventories at Group companies and in the dealer organization were higher at the end of the reporting period than at year-end 2017.

EMPLOYEES
Including the Chinese joint ventures, the Volkswagen Group employed an average of 655,722 people in fiscal year 2018, an increase of 3.4% year-on-year. In Germany, we employed 290,757 people on average in 2018; at 44.3 (44.9)%, their share of the total headcount was slightly below the level of the previous year.

The Volkswagen Group had 636,156 active employees (+3.4%) as of December 31, 2018. In addition, 9,096 employees were in the passive phase of their partial retirement and 19,244 young people were in vocational traineeships. The Volkswagen Group’s headcount was 664,496 employees (+3.5%) at the end of the reporting period. The main contributors to this were the volume-related expansion, the recruitment of specialists inside and outside Germany and the expansion of the workforce at our new plants in China. A total of 292,729 people were employed in Germany (+1.8%), while 371,767 were employed abroad (+4.8%).

Shares and Bonds

Volkswagen AG’s ordinary and preferred shares underperformed the market as a whole amid volatility in 2018. The Company successfully reentered the US capital market for the first time since the emergence of the diesel issue.

EQUITY MARKETS AND PERFORMANCE OF THE PRICE OF VOLKSWAGEN’S SHARES

In the period from January to December 2018, declining prices overall were seen on the international equity markets amid volatile trading.

The DAX recorded a drop compared with the end of 2017. Uncertainty regarding the economic policy of the US government, the monetary policy of the US Federal Reserve as well as the European Central Bank and the economic risks of some countries had a lasting negative impact on share prices. The promising economic performance of important industrialized nations and the formation of governments in the individual EU countries had a positive effect.

Throughout 2018, Volkswagen AG’s preferred and ordinary share prices followed the decreasing market trend amid high volatility. Strong liquidity and the enhancement of the management structure at the Volkswagen Group provided a positive impetus. Share prices were negatively impacted, in particular by uncertainty about the future regulatory framework for diesel and electric vehicles, the diesel issue, the US tariff policy and the WLTP test procedure for determining pollutant and CO₂ emissions and fuel consumption for passenger cars and light commercial vehicles.

DIVIDEND POLICY
Our dividend policy matches our financial strategy. In the interests of all stakeholders, we aim for continuous dividend growth so that our shareholders can participate appropriately in our business success. The proposed dividend amount therefore reflects our financial management objectives – in particular, ensuring a solid financial foundation as part of the implementation of our strategy.

The Board of Management and Supervisory Board of Volkswagen AG are proposing a dividend of €4.80 per ordinary share and €4.86 per preferred share for fiscal year 2018. On this basis, the total dividend amounts to €2.4 (2.0) billion. The distribution ratio is based on the Group’s earnings after tax attributable to Volkswagen AG shareholders. This amounts to 20.4% for the reporting period and stood at 17.6% in the previous year. In our Group strategy, we aim to achieve a distribution ratio of 30%.

DIVIDEND YIELD
Based on the dividend proposal for the reporting period, the dividend yield on Volkswagen ordinary shares is 3.5 (2.3)%, measured by the closing price on the last trading day in 2018. The dividend yield on preferred shares is 3.5 (2.4)%.

The current dividend proposal can be found in the chapter entitled “Volkswagen AG (condensed in accordance with the German Commercial Code)”, on page 130 of this annual report.

EARNINGS PER SHARE
Basic earnings per ordinary share were €23.57 (22.28) in fiscal year 2018. Basic earnings per preferred share were €23.63 (22.34). In accordance with IAS 33, the calculation is based on the weighted average number of ordinary and preferred shares outstanding in the reporting period. Since the number of basic and diluted shares is identical, basic earnings per share correspond to diluted earnings per share.

See also note 11 to the Volkswagen consolidated financial statements for the calculation of earnings per share.

FURTHER INFORMATION ON VOLKSWAGEN SHARES
SHAREHOLDER STRUCTURE AS OF DECEMBER 31, 2018

As of December 31, 2018, Volkswagen AG’s subscribed capital amounted to €1,283,315,873.28. The shareholder structure of Volkswagen AG as of December 31, 2018 is shown in the chart on this page.

The distribution of voting rights for the 295,089,818 ordinary shares was as follows at the reporting date: Porsche Automobil Holding SE, Stuttgart, held 52.2% of the voting rights. The second-largest shareholder was the State of Lower Saxony, which held 20.0% of the voting rights. Qatar Holding LLC was the third-largest shareholder, with 17.0%. The remaining 10.8% of ordinary shares were attributable to other shareholders.

Once the approved issue volume of the American Depositary Receipt (ADR) programs had been reached, Volkswagen AG decided not to renew its “level 1 sponsored ADR” programs and notified the custodian bank, JPMorgan Chase Bank, that the programs were being terminated effective August 13, 2018.

7 Dividend per share based on the year-end-closing price.
8 Order book turnover on the Xetra electronic trading platform (Deutsche Börse).
In 2018, the Volkswagen Group focused its refinancing activities on diversifying instruments and markets.

In June 2018, we boosted net liquidity by placing unsecured, subordinated hybrid notes with an aggregate principal amount of €2.75 billion. The perpetual notes were issued in two tranches and can only be called by the issuer. One tranche with a volume of €1.25 billion has a first call date after six years, while the other tranche of €1.5 billion has a first call date after ten years. The transaction also served to refinance a tranche with a principal amount of €1.25 billion from the hybrid notes issued in 2013; the tranche was terminated in September 2018.

Furthermore, a senior, unsecured benchmark bond for the Automotive Division was issued in Europe in four tranches with a volume of €4.25 billion and in two GBP 800 million tranches. Four benchmark bonds with an aggregate volume of €9.35 billion were issued for the Financial Services Division. In addition to this, private placements were issued in various currencies.

Outside the European refinancing market, the Volkswagen Group was active in the North American capital market. With an aggregate issue volume of USD 8.0 billion, we successfully reentered the US capital market for the first time since the emergence of the diesel issue.

Notes with a volume of around CAD 2.25 billion were issued in the Canadian refinancing market.

A further focus of refinancing was the continued issue of commercial paper, especially in the European region and in euros, as well as in the United States.

Asset-backed securities (ABS) transactions were another important element of our refinancing activities. ABS transactions in excess of €7.1 billion were placed in Europe. In addition, ABS transactions were issued in Australia, Japan, Turkey and the USA among other countries.

The proportion of fixed-rate instruments in the past year was roughly three times as high as the proportion of variable-rate instruments.

In all refinancing arrangements, we aim to exclude interest rate and currency risk with the simultaneous use of derivatives.

The table below shows how our money and capital market programs were utilized as of December 31, 2018 and illustrates the financial flexibility of the Volkswagen Group:

Volkswagen AG’s syndicated credit line of €5.0 billion agreed in July 2011 was extended in 2015 to April 2020 by exercising an extension option. This credit facility remained unused as of the end of 2018.

Of the syndicated credit lines worth a total of €7.6 billion at other Group companies, €1.8 billion has been drawn down. In addition, Group companies had arranged bilateral, confirmed credit lines with national and international banks in various other countries for a total of €4.2 billion, of which €1.8 billion was drawn down.

Volkswagen AG’s syndicated credit line of €5.0 billion agreed in July 2011 was extended in 2015 to April 2020 by exercising an extension option. This credit facility remained unused as of the end of 2018.

Of the syndicated credit lines worth a total of €7.6 billion at other Group companies, €1.8 billion has been drawn down. In addition, Group companies had arranged bilateral, confirmed credit lines with national and international banks in various other countries for a total of €4.2 billion, of which €1.8 billion was drawn down.

### SUSTAINABILITY RATINGS

Analysts and investors are referring increasingly to company sustainability profiles when making their recommendations and decisions. They draw primarily on sustainability ratings to evaluate a company’s environmental, social and governance performance. At the same time, sustainability ratings are instrumental in determining whether we are meeting our goal of being one of the world’s leading providers of sustainable mobility. Furthermore, they provide the basis for implementing internal measures.

After the diesel issue became public knowledge, the Volkswagen Group was downgraded significantly in the MSCI, RobecoSAM, Sustainalytics, oekom ISS, VigeoEiris, EcoVadis and RepRisk sustainability indices and consequently removed from sustainability indices such as the Dow Jones Sustainability Index and the FTSE4Good Index. In fiscal year 2018, Volkswagen continued to have a score of A– in the CDP and also an A– rating in the Water Disclosure Project (WDP).
The Volkswagen Group’s segment reporting comprises the four reportable segments Passenger Cars, Commercial Vehicles, Power Engineering and Financial Services, in compliance with IFRS 8 and in line with the Group’s internal management and reporting.

At Volkswagen, the segment result is measured on the basis of the operating result.

The reconciliation column contains activities and other operations that do not by definition constitute segments. These include the unallocated Group financing activities. The reconciliation also contains consolidation adjustments between the segments (including the holding company functions). Purchase price allocation for Porsche Holding Salzburg and Porsche, Scania and MAN reflects their accounting treatment in the segments.

The Automotive Division comprises the Passenger Cars, Commercial Vehicles and Power Engineering segments, as well as the figures from the reconciliation. The Passenger Cars segment and the reconciliation are combined to form the Passenger Cars Business Area; for Commercial Vehicles and Power Engineering, the segment is the same as the business area. The Financial Services Division corresponds to the Financial Services segment.

### APPLICATION OF NEW INTERNATIONAL FINANCIAL REPORTING STANDARDS

The application of IFRS 9 “Financial Instruments” and IFRS 15 “Revenue from Contracts with Customers” became mandatory as of January 1, 2018.

IFRS 9 changes the accounting requirements for classifying and measuring financial assets, for impairment of financial assets, and for hedge accounting. Some of the fair value measurement gains and losses on certain derivatives, which were previously reported under the financial result, are now reported directly in sales revenue and other operating income. This will have a more significant impact on operating profit.

IFRS 15 specifies new accounting rules for revenue recognition. In this context, the way income from the reversal of provisions and accrued liabilities is reported has also been adjusted; these items are now allocated to the functions in which they were originally recognized.

</table>
In addition, expenses for certain sales programs had to be reclassified.

The situation described has led, among other things, to adjustments to prior-year figures in the income statement. Cost of sales, distribution and administrative expenses, and the net other operating result required adjustments in connection with the change in the way reversals of provisions are reported; the reclassification of expenses for certain sales programs led to a decrease in sales revenue and distribution expenses. The operating profit was unchanged. The application of IFRS 9 led to minor adjustments to the financial result and consequently also to profit before tax, income tax expense and profit after tax.

**SPECIAL ITEMS**

Special items consist of certain items in the financial statements whose separate disclosure the Board of Management believes can enable a better assessment of our economic performance.

In the reporting period, negative special items in connection with the diesel issue amounting to €–3.2 (–3.2) billion affected operating profit in the Passenger Cars Business Area. These were mainly attributable to the fines resulting from the final administrative fine orders issued by the Braunschweig public prosecutor’s office (€1.0 billion) and the Munich II public prosecutor’s office (€0.8 billion), to higher legal risks and legal defense costs and an increase in expenses for technical measures.

**COMPENSATION PAID TO THE NONCONTROLLING INTEREST SHAREHOLDERS OF MAN SE**

In the award proceedings regarding the appropriateness of the cash settlement and the right to compensation for the noncontrolling interest shareholders of MAN SE, the Higher Regional Court in Munich made a final decision at the end of June 2018, ruling that the right to annual compensation per share must be increased. The cash settlement per share, raised in a first instance ruling by the First Regional Court in Munich, was confirmed.

In August 2018, the control and profit and loss transfer agreement with MAN SE was terminated by extraordinary notice as of January 1, 2019.

Cash outflows for compensation payments and the acquisition of shares tendered amounted to €2.1 billion in the period to December 31, 2018. The "Put options and compensation rights granted to noncontrolling interest shareholders" item reported in the balance sheet was reduced accordingly.

1 Including allocation of consolidation adjustments between the Automotive and Financial Services divisions.

2 Adjusted
Results of operations of the Group

The Volkswagen Group recorded sales revenue of €235.8 billion in fiscal year 2018, thus exceeding the prior-year figure by €6.3 billion. Improvements in volumes and in the mix, and the healthy business performance in the Financial Services Division were offset by negative exchange rate effects. The effects of applying the new International Financial Reporting Standards resulted in an overall increase in sales revenue. The Volkswagen Group generated 81.4 (80.7)% of its sales revenue abroad.

Gross profit was up on 2017 at €46.3 (43.5) billion. Adjusted for special items recorded under this item in both periods, gross profit amounted to €46.6 (45.8) billion. The gross margin rose to 19.7 (19.0)%; excluding special items it was 19.8 (19.9)%.

At €17.1 (17.0) billion, the Volkswagen Group’s operating profit before special items was on a level with the previous year. The return on sales before special items amounted to 7.3 (7.4)%.

At €17.1 (17.0) billion, the Volkswagen Group’s operating profit before special items was on a level with the previous year. The return on sales before special items amounted to 7.3 (7.4)%.

Positive factors included primarily volume improvements, although higher depreciation and amortization charges due to the large volume of capital expenditure, increased research and development costs, and fair value measurement gains and losses on certain derivatives, which have had to be reported here since the beginning of the year, had a negative impact. Special items in connection with the diesel issue weighed on operating profit, reducing this item by €–3.2 (–3.2) billion. The Volkswagen Group’s operating profit was €13.9 (13.8) billion and the operating return on sales stood at 5.9 (6.0)%.

The financial result increased by €1.9 billion to €1.7 billion. Foreign currency measurement, lower interest expenses and lower expenses from the measurement on the reporting date of derivative financial instruments, which are used to hedge financing transactions, had a positive impact. The effect of the remeasurement of put options and compensation rights in connection with the control and profit and loss transfer agreement with MAN SE was negative. The share of profits of equity-accounted investments decreased year-on-year, while there was a rise in the profits generated by the Chinese joint ventures. In the prior-year period, the remeasurement of the interest in HERE following the acquisition of shares by additional investors had a positive impact.

The Volkswagen Group’s profit before taxes increased to €15.6 billion in the reporting period; this was 14.4% higher than in the previous year. The return on sales before tax improved to 6.6 (6.0)%. Income taxes resulted in an expense of €3.5 (2.2) billion, which in turn led to a tax rate of 22.3 (16.2)% in fiscal year 2018. In the previous year, the tax reform in the USA passed at the end of 2017 had a non-recurring positive non-cash measurement effect. Profit after tax was €12.2 billion, an improvement of €0.7 billion compared with 2017.

Results of operations in the Automotive Division

Sales revenue in the Automotive Division rose by €5.2 billion to €201.1 billion in the reporting period. Improvements in volumes and in the mix had a positive impact, while the effect of exchange rates was negative. In the second half of the year, the changeover to WLTP (Worldwide Harmonized Light-Duty Vehicles Test Procedure) weighed on performance. As our Chinese joint ventures are accounted for using the equity method, the Group’s performance in the Chinese passenger car market is mainly reflected in consolidated sales revenue only through deliveries of vehicles and vehicle parts.
Cost of sales was up, mainly as a result of expansion and due to higher depreciation and amortization charges and research and development costs recognized in profit or loss. Special items recognized here in the reporting period were down on the previous year. Expressed as a percentage of sales revenue, cost of sales before special items was up slightly.

Total research and development costs as a percentage of the Automotive Division’s sales revenue (research and development ratio or R&D ratio) amounted to 6.8 (6.7)% in fiscal year 2018. In addition to new models, our activities focused above all on the electrification of our vehicle portfolio, a more efficient range of engines, digitalization and new technologies.

Distribution expenses and their ratio to sales revenue were down on the previous year. This was attributable to reclassifications of expenses to sales revenue as a consequence of the new IFRS 15, the sale of the PGA Group in June 2017, as well as exchange rate effects. Administrative expenses and their ratio to sales revenue increased compared with 2017. The main factors contributing to the €2.3 billion decline in other operating income to €–2.5 billion in fiscal year 2018 included an increase in special items recognized in connection with the diesel issue, negative exchange rate effects, and the fair value measurement of gains and losses on certain derivatives to which hedge accounting is not applied, and which have had to be reported here since the beginning of the year.

The operating profit of the Automotive Division was at the prior-year level at €11.1 (11.1) billion. Special items in connection with the diesel issue weighed on profit, reducing this item by €–3.2 (–3.2) billion. Moreover, an increase in depreciation and amortization charges, higher research and development costs recognized in profit or loss, and the fair value measurement of gains and losses on certain derivatives, which have had to be reported in operating profit since the beginning of the year, had a negative impact. The operating return on sales amounted to 5.7 (5.9)%.

The Passenger Cars Business Area recorded sales revenue of €160.8 billion in the reporting period, €3.5 billion more than in the previous year; this increase was driven mainly by volume and mix improvements, while exchange rates had a negative effect. At €9.2 (9.3) billion, operating profit was in line with the previous year. Special items in connection with the diesel issue weighed on profit, reducing this item by €–3.2 (–3.2) billion. Moreover, an increase in depreciation and amortization charges, higher research and development costs recognized in profit or loss, and the fair value measurement of gains and losses on certain derivatives, which have had to be reported in operating profit since the beginning of the year, had a negative impact, while the effect of volume improvements was positive. The operating return on sales amounted to 5.7 (5.9)%.

The Commercial Vehicles Business Area reported sales revenue of €36.7 (35.2) billion in fiscal year 2018. At €2.0 billion, its operating profit was €0.1 billion higher than in the previous year; the operating return on sales was unchanged at 5.4 (5.4)%. The year-on-year increase was mostly driven by higher volumes, positive mix and exchange rate effects, while cost increases had a negative impact.
RESULTS OF OPERATIONS IN THE POWER ENGINEERING BUSINESS AREA

Sales revenue in the Power Engineering Business Area increased by 9.9% year-on-year to €3.6 billion in 2018. The operating loss amounted to €–0.1 (–0.1) billion. Volume improvements were offset by a deterioration in the mix. The operating return on sales stood at –1.8 (–1.7)%.

Results of operations in the Financial Services Division

The Financial Services Division generated sales revenue of €34.8 billion in the reporting period; the 3.1% rise compared with the previous year was mainly due to higher business volume.

Cost of sales rose slightly slower than sales revenue, increasing by €0.7 billion to €28.2 billion. Distribution expenses and their ratio to sales revenue were both higher. Administrative expenses rose slightly, while their ratio to sales revenue was virtually unchanged year-on-year. The growth in volumes and higher IT costs were the main factors in the overall increase in expenses compared with the previous year.

The Financial Services Division’s operating profit improved by 4.5% compared with the previous year, increasing to €2.8 billion and thus contributing significantly to consolidated net profit. The operating return on sales amounted to 8.0 (7.9)%. At 9.9 (9.8)%, the return on equity before tax was on a level with the previous year.

Principles and goals of financial management

Financial management in the Volkswagen Group covers liquidity management, the management of currency, interest rate and commodity risks, as well as credit and country risk management. It is performed centrally for all Group companies by Group Treasury, based on internal directives and risk parameters. The main areas of the MAN and Porsche Holding Salzburg subgroups are integrated into the financial management of the Group while Scania is included to a limited extent. Additionally, these subgroups have their own financial management structures.

The goal of financial management is to ensure that the Volkswagen Group remains solvent at all times and at the same time to generate an adequate return from the investment of surplus funds. We use cash pooling to optimize the use of existing liquidity between the significant companies in Europe. In this system, the balances, either positive or negative, accumulating in the cash pooling accounts are swept daily into a target account at Group Treasury and thus pooled. The aim of currency, interest rate and commodity risk management is to hedge the prices on which investment, production and sales plans are based using derivative financial instruments and commodity forwards, and to mitigate interest rate risks incurred in financing transactions. Credit and country risk management uses diversification to limit the Volkswagen Group’s exposure to counterparty risk. To achieve this, counterparty risk management imposes internal limits on the volume of business per counterparty when financial transactions are entered into. Various credit rating criteria are used in this process. These focus primarily on the capital resources of potential counterparties, as well as the ratings awarded by independent agencies. The relevant risk limits and the authorized financial instruments, hedging methods and hedging horizons are approved by the Group Board of Management Committee for Risk Management. For additional information on the principles and goals of financial management, please refer to page 185 and to the notes to the 2018 consolidated financial statements on pages 289 to 310.

FINANCIAL POSITION

Financial position of the Group

The Volkswagen Group’s gross cash flow was €35.6 billion in fiscal year 2018, an increase of 9.1% compared with the prior-year figure. Administrative fines imposed after regulatory offense proceedings, which were recognized as special items in connection with the diesel issue in the reporting period, led to cash outflows. The rise in working capital led to tied-up funds in the amount of €–28.3 (–33.8) billion. The €5.5 billion change reflects the significant decrease in cash outflows attributable to the diesel issue in the reporting period, set against a WLTP-related increase in inventories. As a result, cash flows from operating activities were up by €8.5 billion to €7.3 billion.

The Volkswagen Group’s investing activities attributable to operating activities stood at €19.4 billion, 6.4% more than in the previous year.

Cash inflows from financing activities amounted to €24.6 (17.6) billion. The figure mainly comprises the issuance and redemption of bonds and other financial liabilities. Financing activities also include the dividends paid to the shareholders of Volkswagen AG, the acquisition of MAN shares tendered following the ruling in the award pro-

ceedings, the successful placement of dual-tranche hybrid notes in June 2018, and the redemption of the hybrid notes terminated in the third quarter of 2018.

At the end of the reporting period, the Volkswagen Group’s cash and cash equivalents as reported in the cash flow statement amounted to €28.1 (18.0) billion and were thus significantly up on the prior-year reporting date.

On December 31, 2018, the Volkswagen Group’s net liquidity was €–134.7 billion, compared with €–119.1 billion at the end of 2017.

**Financial position of the Automotive Division**

The Automotive Division’s gross cash flow amounted to €26.0 billion in fiscal year 2018, €2.5 billion more than a year earlier. The increase was mainly due to healthy earnings growth. Special items recognized in the reporting period, most of which have already led to cash outflows, and a year-on-year decline in dividends from the Chinese joint ventures had a negative impact. The change in working capital of €–7.4 (–11.7) billion was €4.3 billion lower than in the previous year; it mainly reflects the significant decrease in cash outflows attributable to the diesel issue in the reporting period set against a WLTP-related increase in inventories. As a result, cash flows from operating activities rose by €6.8 billion to €18.5 billion.

Investing activities attributable to operating activities increased by €1.2 billion to €18.8 billion. Investments in property, plant and equipment, investment property and intangible assets, excluding capitalized development costs (capex), were 4.6% higher, at €13.2 billion. The ratio of capex to sales revenue was 6.6 (6.5)%. We invested mainly in our production facilities and in models that we launched in the reporting period or are planning to launch next year. These are primarily the Touareg, T-Cross, Audi e-tron, Audi Q3, Audi A6, Porsche 911 and Porsche Taycan model series, and the Bentley Continental family. Other investment priorities included the ecological focus of our model range, product electrification and digitalization, and our modular toolkits. Capitalized development costs of €5.2 (5.3) billion were in line with 2017 levels. Within the “Acquisition and disposal of equity investments” item, the sale of a part of the shares in There Holding was offset mainly by the investment in the newly established joint venture with Anhui Jianghuai Automobile (JAC) and the acquisition of additional shares in Quantum Scape. The prior-year figure had included the acquisition of the shares in Navistar and the disposal of part of the PGA Group.

Due mainly to markedly lower cash outflows attributable to the diesel issue, net cash flow in the Automotive Division improved by €5.6 billion to €–0.3 (–6.0) billion compared with the previous year.

Cash inflows from financing activities amounted to €4.3 (3.6) billion in fiscal year 2018. In May 2018, a dividend totaling €2.0 billion was distributed to the shareholders of Volkswagen AG, €1.0 billion more than in the previous year. The successful placement of dual-tranche hybrid notes with an aggregate principal amount of €2.75 billion via Volkswagen International Finance N.V. in June 2018 resulted in a cash inflow. The notes consist of a €1.25 billion note that carries a coupon of 3.375% and has a first call date after six years, and a €1.5 billion note that carries a coupon of 4.625% and has a first call date after ten years. Both tranches are

perpetual and, net of transaction costs and other factors, increase equity. €2.75 billion of the hybrid notes were classified as a capital contribution, which increased net liquidity. The redemption of the hybrid notes terminated in the third quarter of 2018 caused a cash outflow of €1.25 billion in the reporting period. Financing activities also include the issuance and redemption of bonds and other financial liabilities, as well as the MAN shares tendered as a result of the award proceedings and shares in AUDI AG acquired in the fiscal year.

The Automotive Division’s net liquidity was €19.4 billion on December 31, 2018, €3.0 billion lower than at the end of fiscal year 2017. The Automotive Division’s net liquidity stood at 8.2 (9.7)% of consolidated sales revenue in fiscal year 2018.

The Commercial Vehicles Business Area’s gross cash flow was €3.8 (3.7) billion in fiscal year 2018; the slight increase over the previous year was due to higher earnings. The change of funds tied up in working capital decreased by €0.1 billion to €–1.2 billion. As a result, cash flows from operating activities were up on the 2017 figure, increasing to €2.6 (2.4) billion. Investing activities attributable to operating activities stood at €2.5 (2.1) billion. This figure comprises increased capex and higher capitalized development costs mainly for the T7 and Caddy models. The prior-year figure included the acquisition of the shares in Navistar. Net cash flow amounted to €0.1 billion, €0.2 billion lower than a year earlier.

The Power Engineering Business Area generated a gross cash flow of €0.3 (0.3) billion in the reporting period. Funds tied up in working capital amounted to €–0.3 (–0.3) billion. Cash flows from operating activities were slightly higher than in the previous year. Investing activities attributable to operating activities stood at €0.2 (0.2) billion. Net cash flow improved by €0.1 billion to €–0.1 billion.

In fiscal year 2018, the Passenger Cars Business Area’s gross cash flow improved by €2.4 billion to €21.8 billion. The increase was mainly due to healthy earnings growth; cash outflows associated with special items recognized in the reporting period had an offsetting effect. At €–5.9 (–10.1) billion, the negative impact on the change in working capital was less than in the year before, especially because of significantly lower cash outflows attributable to the diesel issue; this was set against a WLTP-related increase in inventories. Consequently, cash flows from operating activities went up by €6.6 billion to €15.9 billion. Investing activities attributable to operating activities of €16.2 (15.3) billion were up on 2017 levels. Capex grew, while capitalized development costs declined. In the reporting period, the sale of some of the shares in There Holding was offset by the investment in the joint venture with Anhui Jianghuai Automobile (JAC) and the acquisition of additional shares in Quantum Scape. In the prior-year period, the sale of part of the PGA Group had a positive effect on this item. Net cash flow increased to €–0.3 (–0.6) billion.

1 Including allocation of consolidation adjustments between the Automotive and Financial Services divisions, primarily intragroup loans.
Financial position in the Financial Services Division
In the reporting period, the Financial Services Division’s gross cash flow was €9.6 (9.2) billion. The change in working capital declined by €1.2 billion year-on-year to €–20.9 billion. Cash flows from operating activities amounted to €–11.3 (–12.9) billion.

At €0.5 (0.6) billion, investing activities attributable to operating activities were in line with the previous year.

The Financial Services Division’s financing activities relate primarily to the issuance and redemption of bonds and other financial liabilities; the total cash inflow to refinance the business volume was €20.3 (14.1) billion.

The Financial Services Division’s negative net liquidity, which is common in the industry, stood at €–154.1 billion at the end of the reporting period; at the end of December 2017 it had amounted to €–141.5 billion.

NET ASSETS

Consolidated balance sheet structure
The Volkswagen Group’s total assets amounted to €458.2 billion at the end of fiscal year 2018, 8.5% more than at the end of the previous year; the main contributing factor was the increased business volume in the Financial Services Division. The structure of the consolidated balance sheet as of the reporting date is shown in the chart on this page. The Volkswagen Group’s equity was €117.3 (109.1) billion on December 31, 2018. The equity ratio was virtually unchanged from the previous year, at 25.6 (25.8)%.

The implementation of the new International Financial Reporting Standards led to adjustments to the opening balance sheet of the Volkswagen Group as of January 1, 2018. The amounts as of December 31, 2017 were unchanged, apart from movements within equity.

As of the end of fiscal year 2018, the Group had off-balance-sheet commitments in the form of contingent liabilities in the amount of €9.3 (8.4) billion, financial guarantees in the amount of €0.3 (0.3) billion and other financial obligations in the amount of €26.6 (23.5) billion. Contingent liabilities relate primarily to legal risks in connection with the diesel issue as well as potential liabilities from tax risks in the Commercial Vehicles Business Area in Brazil. The other financial obligations primarily result from purchase commitments for property, plant and equipment, obligations under long-term leasing and rental contracts and irrevocable credit commitments to customers. In addition, they include investments to which the Group has committed itself in the infrastructure for zero-emission vehicles and in initiatives to promote access to and awareness of this technology. These commitments were made as part of the settlement agreements in the USA in connection with the diesel issue. Other financial obligations include an amount of €1.3 billion for this purpose.

Automotive Division balance sheet structure
As of December 31, 2018, the Automotive Division’s intangible assets and property, plant and equipment were both up year-on-year. Equity-accounted investments rose slightly. The dividend distributions resolved by the Chinese joint ventures were set against positive business results of the Chinese joint ventures and the acquisition of the shares in Quantum Scape. The decrease in noncurrent other receivables and financial assets was due among other factors to the negative impact from the measurement of derivatives. Overall, there was a slight increase in noncurrent assets, to €143.2 (140.9) billion, compared with the previous balance sheet date.
At €91.4 (80.2) billion, current assets were up significantly compared with the end of 2017; the inventories included in this figure increased by 14.4%, mainly for production-related reasons and because of the changeover to the WLTP test procedure. The decrease in current other receivables and financial assets was due mainly to the negative impact from the measurement of derivatives. Cash and cash equivalents were significantly higher than on December 31, 2017, rising to €24.2 (13.8) billion.

Equity in the Automotive Division amounted to €88.9 billion at the end of 2018. This 8.9% increase on the previous year’s balance sheet date was mainly a result of the healthy earnings growth and the hybrid notes issued in June 2018. The negative effects from the measurement of derivatives recognized outside profit or loss and currency translation, the dividends paid to the shareholders of Volkswagen AG, the redemption of the hybrid notes terminated in the third quarter of 2018 and the non-recurring impact of the first-time application of the new International Financial Reporting Standards reduced equity in the Automotive Division. The noncontrolling interests are mainly attributable to RENK AG and AUDI AG. As these were lower overall than the noncontrolling interests attributable to the Financial Services Division, the figure for the Automotive Division, where the deduction was recognized, was negative. The equity ratio was 37.9 (36.9)%, up on the figure as of December 31, 2017.

Noncurrent liabilities went up to €77.7 (69.8) billion, driven mainly by the rise in the noncurrent liabilities included in this item.

Current liabilities declined to €68.0 billion, in total 2.5% down on the end of 2017. The item “Put options and compensation rights granted to noncontrolling interest shareholders” primarily comprises the liability for the obligation to acquire the shares held by the remaining free float shareholders of MAN; following the ruling in the award proceedings, the extraordinary notice of termination of the control and profit and loss transfer agreement, and the cash outflows for the cash compensation and the acquisition of shares tendered, this item was adjusted accordingly to €1.8 (3.8) billion. Reclassifications from noncurrent to current liabilities due to shorter remaining maturities were among the factors that led to a rise in current financial liabilities compared with the end of 2017. The figures for the Automotive Division also contain the elimination of intragroup transactions between the Automotive and Financial Services divisions. As the current financial liabilities for the primary Automotive Division were lower than the loans granted to the Financial Services Division, a negative amount was disclosed in both periods. Current other provisions included in current other liabilities declined due to their use in connection with the diesel issue.

On December 31, 2018, total assets in the Automotive Division amounted to €234.5 billion, 6.1% more than at the end of 2017.

Intangible assets and property plant and equipment in the Passenger Cars Business Area were higher than in the previous year. The decrease in noncurrent other receivables and financial assets was due to factors such as the negative impact from the measurement of derivatives. Overall, noncurrent assets grew by €1.5 billion to €112.8 billion. Current assets increased by a total of €2.8 billion to €65.9 billion; the inventories included in this figure grew for production-related reasons and because of the changeover to the WLTP test procedure. There was a threefold year-on-year increase in cash and cash equivalents to €18.1 (6.1) billion. Total assets stood at €178.7 (171.3) billion at the end of 2018.

At €70.8 billion, the Passenger Cars Business Area’s equity exceeded the prior-year figure by 6.6%, due mainly to earnings-related factors and the hybrid notes issued in the reporting period.

Noncurrent liabilities were 13.3% higher than at the end of 2017; the financial liabilities included in this item were up significantly. Current liabilities decreased by a total of 8.7%. Current other liabilities and current other provisions were down on the prior-year figure.
On December 31, 2018, the Commercial Vehicles Business Area’s intangible assets and property, plant and equipment were higher than at the end of 2017. Equity-accounted investments were up, while other equity investments decreased as a result of an intragroup sale (power engineering business). Overall, noncurrent assets grew by €0.9 billion to €27.9 billion. Current assets amounted to €21.9 (16.9) billion, significantly up on the previous year’s balance sheet date. The current other receivables and financial assets included in this item increased, while cash and cash equivalents declined; the payments in connection with the intragroup sale of the power engineering business will become due in the first quarter of 2019. Total assets climbed by 13.3% to €49.7 billion.

Equity in the Commercial Vehicles Business Area stood at €15.1 billion at the end of 2018, 23.7% more than a year earlier. In addition to healthy earnings, this increase was attributable to the intragroup sale of the power engineering business. The item “Put options and compensation rights granted to noncontrolling interest shareholders” fell sharply; the item was adjusted to reflect the ruling in the award proceedings and the extraordinary termination of the control and profit and loss transfer agreement, as well as the cash outflows for the cash compensation and the acquisition of shares tendered. Noncurrent liabilities rose by 3.7%; the noncurrent financial liabilities included in this item were down on the previous year, while noncurrent other liabilities increased. Current liabilities were 13.7% higher than on December 31, 2017. Current other liabilities were significantly higher.

In the Power Engineering Business Area, the decline in noncurrent assets was mainly attributable to a year-on-year decrease in intangible assets. Higher inventories and receivables led to a 10.7% rise in current assets compared with the previous balance sheet date. At the end of 2018, the Power Engineering Business Area recorded a 3.7% year-on-year increase in total assets to €6.1 billion.

On December 31, 2018, equity stood at €3.0 (3.0) billion, and thus on a level with the previous year. Both noncurrent and current liabilities were up in the reporting period compared with the 2017 balance sheet date.

Financial Services Division balance sheet structure
On December 31, 2018, total assets in the Financial Services Division amounted to €223.6 billion, 11.2% more than at the end of 2017.

There was a significant rise in both lease assets and noncurrent receivables, tracking the growth in business. Noncurrent assets were up by 8.5% in total.

Current assets rose by 15.3%, driven by higher volumes. The revised classification of financial instruments required by IFRS 9 led to reclassifications, in particular of financial services receivables to trade receivables, which are included in the “Other receivables and financial assets” item. Total securities increased by €1.3 billion to €3.7 billion.

On December 31, 2018, the Financial Services Division accounted for around 48.8 (47.6)% of the Volkswagen Group’s assets.
The 3.7% rise in equity to €28.5 billion in the reporting period was mainly attributable to healthy earnings. The equity ratio was 12.7 (13.7)%.

Noncurrent liabilities were up 14.8%, mainly because of a rise in noncurrent financial liabilities to refinance the business volume. Current liabilities increased by a total of 10.3% and the current financial liabilities included in this item rose markedly.

At €29.9 (31.4) billion, deposits from the direct banking business were lower at the end of 2018 than they had been a year earlier.

**RETURN ON INVESTMENT (ROI) AND VALUE CONTRIBUTION**

The Volkswagen Group’s financial target system centers on continuously and sustainably increasing the value of the Company. In order to ensure the efficient use of resources in the Automotive Division and to measure the success of this, we have been using a value-based management system for a number of years, with return on investment (ROI) as a relative indicator and value contribution\(^1\), a key performance indicator linked to the cost of capital, as an absolute performance measure.

The return on investment serves as a consistent target in strategic and operational management. If the return on investment exceeds the market cost of capital, there is an increase in the value of the invested capital and a positive value contribution. The concept of value-based management allows the success of the Automotive Division and individual business units to be evaluated. It also enables the earnings power of our products, product lines and projects – such as new plants – to be measured.

**Components of value contribution**

Value contribution is calculated on the basis of the operating result after tax and the opportunity cost of invested capital.

The operating result shows the economic performance of the Automotive Division and is initially a pre-tax figure. Using the various international income tax rates of the relevant companies, we assume an overall average tax rate of 30% when calculating the operating result after tax.

The cost of capital is multiplied by the average invested capital to give the opportunity cost of capital. Invested capital is calculated as total operating assets reported in the balance sheet (property, plant and equipment, intangible assets, lease assets, inventories and receivables) less non-interest-bearing liabilities (trade payables and payments on account received). Average invested capital is derived from the balance at the beginning and the end of the reporting period.

As the concept of value-based management only comprises our operating activities, assets relating to investments in subsidiaries and associates and the investment of cash funds are not included when calculating invested capital. Interest charged on these assets is reported in the financial result.

**Determining the current cost of capital**

The cost of capital is the weighted average of the required rates of return on equity and debt. The cost of equity is determined using the Capital Asset Pricing Model (CAPM).

This model uses the yield on long-term risk-free Bunds, increased by the risk premium attaching to investments in the equity market. The risk premium comprises a general market risk and a specific business risk.

The general risk premium of 6.5% reflects the general risk of a capital investment in the equity market and is oriented on the Morgan Stanley Capital International (MSCI) World Index.

The specific business risk – price fluctuations in Volkswagen preferred shares – has been modeled in comparison to the MSCI World Index when calculating the beta factor. The MSCI World Index is a global capital market benchmark for investors.

The analysis period for the beta factor calculation spans five years with annual beta figures calculated on a daily basis followed by the subsequent calculation of the average. A beta factor of 1.17 (1.12) was determined for 2018.

---

1 The value contribution corresponds to the Economic Value Added (EVA\(^\circ\)). EVA\(^\circ\) is a registered trademark of Stern Stewart & Co.
The cost of debt is based on the average yield for long-term debt. As borrowing costs are tax-deductible, the cost of debt is adjusted to account for the tax rate of 30%.

A weighting on the basis of a fixed ratio for the fair values of equity and debt gives an effective cost of capital for the Automotive Division of 6.2 (6.0)% for 2018.

The operating result after tax of the Automotive Division, including the proportionate operating result of the Chinese joint ventures, was €11,438 (11,756) million in fiscal year 2018. Volume improvements were unable to compensate for the year-on-year decline that was primarily caused by rising depreciation and amortization charges due to the large volume of capital expenditure, higher research and development costs, as well as the fair value measurement of gains and losses on certain derivatives, which have been reported here since the beginning of the year. Effects on earnings and assets from purchase price allocation are not taken into account as they cannot be influenced operationally by management.

In the reporting year, the invested capital rose to €104,424 (97,021) million. The increase was particularly due to higher inventories as well as to additions to investments in property, plant and equipment and capitalized development costs.

The return on investment (ROI) is the return on invested capital for a particular period based on the operating result after tax. The ROI declined year-on-year as a result of the lower operating profit and higher invested capital. However, at 11.0 (12.1)%, it exceeded our minimum rate of return on invested capital of 9% in spite of the adverse effects of the special items on earnings.

At €6,474 (5,821) million, the opportunity cost of capital (invested capital multiplied by cost of capital) was up on the prior-year level due to the increase in the invested capital and the higher cost of capital. After deduction of the opportunity cost of invested capital, operating result after tax – which was negatively impacted by special items – led to a positive value contribution of €4,964 (5,935) million.

SUMMARY OF BUSINESS DEVELOPMENT AND ECONOMIC POSITION

The Board of Management of Volkswagen AG considers business development and the economic position to have been positive overall.

In spite of the challenges presented by the diesel issue and public discussion pertaining to diesel vehicles, the persistently difficult market conditions and the new WLTP test procedure, we slightly lifted our deliveries to customers to 10.8 million vehicles, thus achieving a new sales record. We saw growth in Europe, South America and the Asia-Pacific region. The Group’s sales revenue rose by 2.7%, within the expected range. Operating profit before special items amounted to €17.1 billion; at 7.3% the operating return on sales before special items was within the range forecast at the beginning of the year of 6.5–7.5%. Due to special items resulting from the diesel issue, the operating return on sales of 5.9% was moderately below the forecast range, as recently projected.

¹ Adjusted; see disclosures about the application of new International Financial Reporting Standards on page 114.
Volkswagen AG

(Condensed, in accordance with the German Commercial Code)

Unit sales of Volkswagen AG were on a level with the previous year in 2018, while sales and profit increased.

ANNUAL RESULT

Additional special items in connection with the diesel issue amounting to €2.0 billion were recognized in fiscal year 2018. These were mainly attributable to the administrative fine order of €1.0 billion imposed by the Braunschweig public prosecutor’s office, higher legal risks and legal defense costs and an increase in expenses for technical measures. Special items had an impact of €0.1 (–2.0) billion on cost of sales and of €–2.0 (–0.9) billion on other operating income.

In the reporting period, sales were 1.7% higher than in the previous year, at €78.0 billion. Sales generated abroad accounted for a share of 64.7 (62.5)%.

1 Including write-downs of long-term financial assets.

Gross profit rose accordingly to €5.3 (3.4) billion.

At €7.6 billion, distribution, general and administrative expenses were up €0.5 billion on the prior-year figure.

The net other operating result was €0.3 billion lower, at €–0.4 (–0.2) billion. The decline was mainly attributable to the year-on-year rise of €1.1 billion in special items.

At €8.3 (8.6) billion, the financial result stood at the prior-year level.

Including the income tax expense of €–0.9 (–0.4) billion, net income for the year amounted to €4.6 (4.4) billion in fiscal year 2018.

1 Including prepaid expenses.
NET ASSETS AND FINANCIAL POSITION

Total assets amounted to €176.4 billion on December 31, 2018, up €19.7 billion on the prior-year figure. Property, plant and equipment was down by €0.2 billion, capital expenditure was lower than depreciation charges. Financial assets increased, driven in particular by capital increases at Volkswagen Finance Luxemburg S.A. (€2.7 billion), Volkswagen Klassik GmbH (€2.3 billion) and Porsche Holding Stuttgart GmbH (€0.9 billion) and by the increased stake in Volkswagen Klassik GmbH recognized directly in equity due to an intragroup reorganization (€2.6 billion). Particularly the capital decrease of €3.3 billion implemented at TRATON SE (formerly TRATON AG) had an offsetting effect.

Fixed assets accounted for a share of 67.9 (72.6)% of total assets.

Current assets (including prepaid expenses) amounted to €56.6 (43.0) billion on December 31, 2018.

At €33.1 billion, equity increased due in particular to the improved net income for the year at the end of the reporting period. The equity ratio was 18.8 (19.4)%.

Other provisions decreased by €2.1 billion to €20.0 (22.1) billion, due primarily to the utilization of provisions in connection with the diesel issue. Provisions for pensions and similar obligations rose by €1.8 billion to €16.1 billion, primarily as a result of a change in measurement inputs, while provisions for taxes increased by €0.2 billion to €3.7 billion.

The €17.1 billion rise in total liabilities (including deferred income) to €103.4 billion is, above all, attributable to higher liabilities to affiliated companies.

Volkswagen AG’s cash funds, comprising cash instruments with a maturity of less than three months, less bank and cash pooling liabilities repayable on demand, improved year-on-year from €–8.5 billion to €–0.2 billion. The interest-bearing portion of debt amounted to €87.9 (74.0) billion. In our assessment, the economic position of Volkswagen AG is just as positive overall as that of the Volkswagen Group.

DIVIDEND PROPOSAL

In fiscal year 2018, net retained profits amounted to €2.4 billion. The Board of Management and Supervisory Board are proposing to pay a total dividend of €2.4 billion, i.e. €4.80 per ordinary share and €4.86 per preferred share.

VEHICLE SALES
Volkswagen AG sold a total of 2,597,126 (2,584,375) vehicles in fiscal year 2018. Vehicles sold abroad accounted for a share of 71.0 (70.0)%.

PRODUCTION
Volkswagen AG produced a total of 1,113,415 vehicles at its vehicle production plants in Wolfsburg, Hanover and Emden in the reporting period (~9.1%).

EMPLOYEES
As of December 31, 2018, a total of 119,394 (117,420) people were employed at the sites of Volkswagen AG, excluding staff employed at subsidiaries. Of this figure, 5,009 (4,953) were vocational trainees. 4,785 (4,380) employees were in the passive phase of their partial retirement.

Female employees accounted for 17.3 (17.1)% of the workforce. Volkswagen AG employed 5,883 (5,069) part-time workers. The percentage of foreign employees was 6.3 (6.1)%.

83.2 (83.4)% of the employees in Volkswagen AG’s production area were in possession of vocational or additional training in the reporting period. The proportion of graduates was 19.5 (18.9)% in the same period. The average age of employees in fiscal year 2018 was 43.9 (43.6) years.

RESEARCH AND DEVELOPMENT
Volkswagen AG’s research and development costs as defined in the German Commercial Code increased to €5.6 (4.8) billion in the reporting period. 12,796 (12,332) people were employed in this area at the end of the reporting period.

EXPENDITURE ON ENVIRONMENTAL PROTECTION
When measuring expenditure on environmental protection, a distinction is made between investments and operating costs for production-related environmental protection measures. Of our total investments, only those that are spent exclusively or primarily on environmental protection are included in environmental protection investments. We distinguish here between additive and integrated investments. Additive environmental protection measures are separate measures upstream or downstream of the production process. In contrast to additive environmental protection measures, integrated measures reduce the environmental impact already during the production process. In 2018 we invested primarily in soil and water pollution control.

The recognized operating costs relate to measures that protect the environment against harmful factors by avoiding, reducing, or eliminating emissions by the Company. Resources are also conserved. For example, these include expenditures incurred to operate equipment that protects the environment as well as expenditures for measures not relating to such equipment. As in previous years, the emphasis in 2018 was on sewage and waste management.

BUSINESS DEVELOPMENT RISKS AND OPPORTUNITIES AT VOLKSWAGEN AG

The business development of Volkswagen AG is exposed to essentially the same risks and opportunities as the Volkswagen Group. These risks and opportunities are explained in the Report on Risks and Opportunities on pages 163 to 187 of this annual report.

RISKS ARISING FROM FINANCIAL INSTRUMENTS

Risks for Volkswagen AG arising from the use of financial instruments are the same as those to which the Volkswagen Group is exposed. An explanation of these risks can be found on pages 185 to 186 of this annual report.

DEPENDENT COMPANY REPORT

The Board of Management of Volkswagen AG has submitted to the Supervisory Board the report required by section 312 of the AktG and issued the following concluding declaration:

“We declare that, based on the circumstances known to us at the time when the transactions with affiliated companies within the meaning of section 312 of the German Stock Corporation Act (AktG) were entered into, our Company received appropriate consideration for each transaction. No transactions with third parties or measures were either undertaken or omitted on the instructions of or in the interests of Porsche or other affiliated companies in the reporting period.”
Sustainable Value Enhancement

Our goal is to run our business responsibly along the entire value chain. Everyone should benefit from this – our customers, our employees, the environment and society. Our future program TOGETHER – Strategy 2025 describes this change process in the Company. The starting point is our vision of being one of the world’s leading providers of sustainable mobility.

The main financial key performance indicators for the Volkswagen Group are described in the "Results of Operations, Financial Position and Net Assets" chapter. Nonfinancial key performance indicators also attest to the efficiency of our Company’s value drivers. These include the processes in the areas of research and development, procurement, production, marketing and sales, information technology and quality assurance. In all of these processes, we are aware of our responsibility towards our customers, our employees, the environment and society. In this chapter we provide examples of how we are increasing the value of our Company in a sustainable way.

SUSTAINABILITY
The Volkswagen Group is committed to sustainable, transparent and responsible corporate governance. The biggest challenge we face in implementing this at all levels and at every step in the value chain is the complexity of our Company, with its twelve brands, around 665 thousand employees and 123 production locations. In order to tackle this complexity in the best way possible, our focus is on coordinating our sustainability activities across the entire Group. We have a forward-looking system of risk management in place, a clear framework for dealing with future environmental issues, and attach great weight to social commitment and employee responsibility. Moreover, we are oriented towards the recommendations of the German Corporate Governance Code.

For us, sustainability means simultaneously striving for economic, social and environmental goals in a way that gives them equal priority. The future program TOGETHER – Strategy 2025 places sustainable growth at the heart of our Group strategy: we want to be an excellent employer and a role model for the environment, safety and integrity, to excite customers and to ensure that we achieve competitive profitability at the same time. Our corporate citizenship activities also support us in this endeavor. We understand corporate citizenship as voluntary services that our company performs for society above and beyond our core business. These services address social challenges, but are also designed to promote business objectives such as improving our reputation, credibility and/or attractiveness as an employer. Specifically, they may take the form of financial donations or donations in kind, social sponsoring, operational projects founded on the Company’s initiative but also different forms of corporate volunteering.

By 2025, we aim to make the Volkswagen Group the world’s number one in electric mobility. We have therefore set new priorities with Roadmap E. We also need to ensure that we detect risks and opportunities in the areas of environment, society and governance at an early stage at every step along the value chain.

Management and Coordination
The Volkswagen Group has created a clear management structure to coordinate the Group’s activities as regards sustainability – including corporate citizenship. Its highest committee is the Group Board of Management. It is regularly briefed by the Group Sustainability steering group on all issues related to the topics of sustainability and corporate responsibility. The members of the Group Sustainability steering group include executives from central Board of Management business areas and representatives of the Group Works Council and the brands. The steering group’s tasks include identifying the key action areas, making decisions on the strategic sustainability goals and programs, using indicators to monitor the extent to which these goals are being met and approving the sustainability report.
Sustainability activities are planned and managed by the functional area Group Sustainability. Its duties include coordinating all sustainability activities within the Group, the brands and the regions. These also include stakeholder management at Group level, for example contact with sustainability-driven analysts and investors. In addition, project teams work across business areas on topics such as decarbonization, human rights and sustainability in supplier relationships. This coordination and working structure is also largely established across the brands and is constantly expanding. Activities in fiscal year 2018 focused on strategically realigning the functional area Group Sustainability and anchoring sustainability in our core business, as well as on developing a sustainability program that places emphasis on climate protection and sustainable supply chains, among other things.

**Sustainability Council**

To support its strategic sustainability goal, the Volkswagen Group appointed a Sustainability Council in September 2016. This is made up of internationally renowned experts from the academic world, politics and society. The Council establishes its own working methods and areas of focus independently, has extensive rights for the purposes of exchanging information, consultation and initiating action, and consults regularly with the Board of Management, top management and the employee representatives.

In 2018, the projects initiated by the Council the year before were commenced: a dialog platform for innovations and cultural change in the area of sustainable mobility, an international program for mitigating the effects of climate change through forecast-based civil protection financing and a scientific study for designing future traffic policy in line with international climate targets. In addition, the Council decided on a further project for the strategic focus of sustainability at Volkswagen and the establishment of a visiting professorship for open labs and cultural change at the Einstein Center Digital Future in Berlin. Furthermore, the Sustainability Council formulated recommendations for how technological, political and cultural change should be organized to win back trust and lay the foundations for future success.

**Materiality analysis**

Two developments in 2018 continued to influence the detailed analysis as to which issues are material to the Volkswagen Group: the alignment of the Group as part of the future program TOGETHER – Strategy 2025 and dealing with the consequences of the diesel issue.

As the starting point for our analysis, we are oriented towards the Sustainable Development Goals (SDGs) formulated by the United Nations, which describe the social challenges facing companies. Based on the results, we defined 18 key action areas for achieving our goal of becoming one of the world’s leading providers of sustainable mobility. In order to identify key topics, we took into account external studies, sector and media analyses, ratings, stakeholder surveys, internal and external guidelines and codes, the Group-wide future program TOGETHER – Strategy 2025 and the individual departmental strategies.

As the details of the Group strategy have not yet been finalized, we are still in the process of specifying the content of the key action areas and defining corresponding values, targets and indicators.

**Principles and guidelines**

Voluntary commitments and principles that apply throughout the Group form the basis of our sustainable focus. In addition, our sustainability model provides the framework for sustainable and responsible action. The Volkswagen Group’s Code of Conduct applies to the entire Group and helps managers and employees alike to deal with legal and ethical challenges in their day-to-day work.
We expressly support the United Nations Global Compact, an agreement between the UN and the business world aimed at enhancing the social and ecological aspects of globalization. As long ago as 2002, the Volkswagen Group made a commitment to promoting human rights, labor standards, environmental protection and combating corruption. We are seeking reincorporation of our membership in the United Nations Global Compact, which had been suspended following the diesel issue; talks on this were resumed in 2018. In addition, our objective is to ensure that our actions are in line with the declarations of the International Labor Organization (ILO), the principles and conventions of the Organisation for Economic Co-operation and Development (OECD) and the international covenants of the United Nations on basic rights and freedom.

We have established our own internal guidelines in the form of the Volkswagen Social Charter, the Charter on Labor Relations, the Charter on Vocational Education and Training, and the Charter on Temporary Work. The environmental policy and the environmental principles for products and production, which apply throughout the Group, are mandatory for environmental protection.

Strategic stakeholder management
Our stakeholders are individuals, groups, or organizations who have a material influence on or are materially influenced by the way in which the Group reaches its corporate decisions and the implications of those decisions. Our customers and our employees are our key stakeholders. Around this core, we have defined eight types of stakeholders. This classification is the product of a stakeholder analysis in which we regularly identify the Group’s key stakeholder groups.

The role of stakeholder management is to enter into dialog with stakeholder groups in order to manage the many demands placed on us and integrate them into decision-making processes. To be able to systematically incorporate our stakeholders’ suggestions and recommendations, we have set up councils such as the Sustainability Council and the Stakeholder Panel. The Panel is comprised of 300 national and international opinion leaders. In addition, we offer our stakeholders a broad range of opportunities for interaction and feedback channels including regular stakeholder discussion events, stakeholder surveys and international partnerships.

RESEARCH AND DEVELOPMENT
Forward-looking mobility solutions with brand-defining products and services would be unthinkable without innovations. This makes our research and development work essential for sustainably increasing the value of the Company.

Together with our Group brands, we have launched strategic initiatives for networking development activities across the Group based on our future program TOGETHER – Strategy 2025. At the heart of this is an efficient, cross-brand development alliance characterized by a close network of our experts, collaboration on an equal footing, an innovative working environment and the pooling of development activities. With this, we aim to make use of synergy effects across the Group and act as a role model for the environment, safety and integrity. The alliance is playing a major part in the Volkswagen Group’s transformation into a leading provider of sustainable mobility and helping to make the Group fit for the future.

Based on this strategic focus, we concentrated in the reporting period on continuing to develop forward-looking mobility solutions, establishing technological expertise to strengthen our competitiveness, expanding our range of products and services and improving the functionality, quality, safety and environmental compatibility of our products and services, for example through cooperation across brands.
Fuel and drivetrain strategy

The Volkswagen Group’s new passenger car fleet in the EU (excluding Lamborghini and Bentley) emitted an average of 123 g CO₂/km¹ in the reporting period and was thus below the 2018 European limit of 130 g CO₂/km. The small year-on-year increase is mainly attributable to the new measurement techniques to be applied. As small volume manufacturers, the Lamborghini and Bentley brands each have an independent fleet for the purposes of the European CO₂ legislation; Bentley complied with its individual target, Lamborghini was slightly above its target.

As part of a Group-wide initiative – and with a view to the legal regulations on emissions – we are currently developing a forward-looking vehicle and drivetrain portfolio: to achieve our goal of sustainable mobility, we have set ourselves the objective of increasing drive system efficiency with each new model generation – irrespective of whether the means of propulsion is a combustion engine, a hybrid, a plug-in hybrid, a purely electric drive, or a fuel cell drive system. The Volkswagen Group closely coordinates technology and product planning with its brands so as to avoid breaches of fleet fuel consumption limits, since these would entail severe financial penalties.

We anticipate that already by the year 2025, one in four new Volkswagen Group vehicles worldwide will have a purely electric drive; depending on the market development, this could be up to three million electric vehicles a year. The Volkswagen Group has launched a comprehensive electrification offensive in the form of Roadmap E. By 2025, we plan to offer our customers around the world more than 80 new electric models, including some 50 purely battery-electric vehicles and 30 plug-in hybrids. By 2030, the Volkswagen Group aims to electrify its entire model portfolio – from high-volume models to premium vehicles. This will mean offering at least one electric version – battery-electric, hybrid or mild hybrid vehicles – of each of our approximately 300 passenger car models across all Group brands. We are therefore developing two new electric platforms for vehicles with a range of up to 600 km.

The Volkswagen Group is committed to achieving the Paris climate targets and is pursuing the goal of making its vehicle fleet completely carbon neutral by 2050.

To enable sustainable, affordable mobility in the future for as many people around the world as possible, we will offer the full range of drivetrains – from conventional combustion engines to all-electric drive. From today’s perspective, conventional combustion engines look set to make up the lion’s share of drive technology in the coming years. In the interest of using resources responsibly, it is therefore essential to further enhance this engine segment and systematically consolidate it for specific markets. Powertrain measures such as far more sophisticated exhaust gas purification or mild hybridization of the vehicles, but also vehicle measures such as optimized aerodynamics or reduced rolling resistance will be necessary to fulfill future emissions standards.

In addition to electric drives and more efficient combustion engines, renewable, reduced-CO₂ fuels (in gas or liquid form) are playing an increasingly important role. We support the expansion of the natural gas (CNG) infrastructure and are conducting intensive research into options for producing fuels from renewable electricity, enabling carbon-neutral operation of combustion engines.

---

Last but not least, we are working under Audi’s leadership to make fuel cell technology ready for market.

It is more important to us than ever to rigorously pursue our modular approach. We are reducing the number of individual modules so that we can make a large product portfolio economically viable. Over the long term, we will reduce the number of versions of conventional combustion engines in the Group by more than a third. This will create capacity for the development and production of new hybrid and electric drives.

**Life cycle engineering and recycling**

On their own, technological innovations for reducing fuel consumption are not enough to minimize the effect of vehicles on the environment. That is why we examine the entire product life cycle of our vehicles – from the extraction of raw materials to the production of components and the provision of fuel and energy during vehicle use to their final disposal. We identify the stages of the life cycle at which improvements will have the greatest effect and develop appropriate solutions. We call this life cycle engineering. Recycling, for example, is an important means of reducing environmental impact and conserving resources. Already when developing new vehicles, we therefore pay attention to the recyclability of the required materials, use high-quality recycled material and avoid pollutants. At the end of their lives, our vehicles are 85% recyclable and 95% recoverable.

**Leveraging synergies increases efficiency**

When developing vehicles, we cooperate closely with our brands to leverage synergies. The joint strategy of our development alliance aims, for example, to make the Group more competitive and viable in the long term by deploying resources more effectively and efficiently in the research and development of new mobility-related technologies, products and services. In our Group-wide development alliance, the brands not only work with each other, but also for each other on key technologies, forming cross-brand networks of expertise to address the topics of the future. For example, we consolidated the Group’s activities and responsibility for the development, procurement and quality assurance of all battery cells centrally in a Center of Excellence under the umbrella of the Volkswagen Passenger Cars brand. There, a pilot line for cell production will be put into operation in 2019 to build up expertise for the Group in cell design, as well as throughout the entire value chain.

Our modules are also managed centrally to reduce costs, capital expenditure and complexity. With the aid of a Group initiative, we are seeking to reduce expenditure in the toolkits, while at the same time implementing a wide-reaching electrification offensive and focusing on autonomous systems. We will achieve this through a considerable reduction in complexity using streamlined platforms that synergize but do not overlap. The individual Group brands are using the modular toolkits, thus creating synergies between the various models of a model line and across model lines. The streamlined toolkits are creating the financial leeway for development of the future trends of digitalization and autonomous driving. As part of the TOGETHER – Strategy 2025 program, the high-volume passenger car brands have introduced model line organization through a Group initiative, consequently strengthening the brands’ responsibility for the success of vehicle projects, improving project work across different cross-departmental areas, accelerating decision-making and intensifying the focus on results of projects.

We are also creating synergy effects by continuing to widely share best practices, for instance in virtual development and testing. Finally, the centralized development and consolidation of IT systems is also helping to strengthen cooperation across brands, make development activities more comparable and reduce the Group’s IT costs.

**Sustainable mobility, connectivity and automated driving**

Mobility is a prerequisite for economic growth. But while the need to always be mobile is rising, natural resources are dwindling. This calls for holistic mobility concepts to minimize the environmental impact. Such solutions need to be efficient, sustainable, customer-oriented and accessible anytime and anywhere.

We are researching and developing such pioneering concepts and solutions in our Group-wide alliance. In shaping the future of mobility, we are looking not only at the automobile but at all modes of transport and transport infrastructures, at people’s mobility habits and at other relevant factors. Innovations such as digital connectivity and automated driving allow for completely new problem-solving approaches. We strive to utilize these in order to play our part in a comprehensive mobility system in the future and to help shape our industry’s transformation.

Another initiative of our future program TOGETHER – Strategy 2025 focuses on establishing a cross-brand mobility solutions business. Our mobility business MOIA is to become one of the leading providers of innovative transport services and will develop profitable and globally scalable business models. Strategic investments and partnerships are also being sought. Our strategic goal is to make Volkswagen one of the world’s leading providers of efficient and convenient
smart mobility services by 2025, with a portfolio encompassing all brands and both “mobility as a service” and “vehicle on demand” services.

On the road to autonomous driving, the Volkswagen Group further improved its assistance systems and automated driving functions in 2018 and fitted them in vehicles. The strategic objective is to market highly automated driving functions for private vehicles, shared mobility systems and commercial mobility providers as a core competency of the Group. The Volkswagen Group has introduced its vision of an autonomous mobility system in the form of the Sedric family, comprising fully autonomous vehicles for short- and long-distance mobility, as well as sports cars, self-driving delivery vehicles and heavy trucks. In both, cities and rural areas, these vehicles will enable new forms of mobility – particularly for user groups that have so far been excluded from access to mobility.

Autonomous driving in complex urban environments places especially heavy demands on technology. We are dedicated to meeting these challenges. Our Autonomous Intelligent Driving GmbH is working on developing a Group-wide system for self-driving vehicles.

Given the growing number of digital and software-based vehicle-related components, customer satisfaction with these elements is becoming increasingly important. The goal of a Group initiative is therefore to make Volkswagen one of the best companies worldwide in terms of user experience. Close collaboration among our Group brands in this area provides the basis for this.

Pooling strengths with strategic alliances

The future program TOGETHER – Strategy 2025 plans to transform our core business and to establish a new mobility solutions business area at the same time. It is decisive to the success of this plan that we place our great innovative strength on even broader foundations.

Growth in the mobility sector is currently a global phenomenon, above all in the economy segment. As part of a Group initiative, Volkswagen is therefore increasingly entering into local partnerships to develop and offer economy products in line with the market. This is helping us to identify regional customer needs more precisely, to adjust our product range accordingly and to establish competitive cost structures. We are therefore concentrating to a greater extent on partnerships, acquisitions and venture capital investments and managing investment selection centrally so as to generate maximum value for the Group and its brands. In light of this aspect, we have formed a large-scale alliance with the Ford Motor Company. The first step involves a collaboration regarding the development of vans and mid-sized pickups starting in 2022. This alliance allows us, in addition to making optimal use of manufacturing capacity, to share the development costs and improve the performance and competitiveness of the vehicles. This generates cost savings, while further strengthening our innovative power. Beyond this specific agreement, we are considering collaboration for additional mobility and vehicle concepts.

Thanks to our strategic partnership with Microsoft, we are accelerating our transformation into a mobility service provider with a fully connected vehicle fleet and our digital ecosystem “Volkswagen We”. Working together, we aim to press ahead with software development for the automobile of tomorrow and new services for our customers. This enables the comprehensive strengthening and expansion of our IT expertise and solutions.

Developing battery technology as a core competency has also been defined in a strategic initiative of the Volkswagen Group. The battery accounts for 20 to 30% of the cost of materials in electric vehicles; in future, it will be one of the most important components for differentiating between products. We have already pooled our in-house expertise in battery cells in a Center of Excellence and also plan to accelerate the building up of expertise and technological change through intelligent partnerships. We anticipate that our own electric fleet with lithium-ion batteries will require a battery capacity of more than 150 GWh a year in the period to 2025. To cover this enormous demand, we have defined strategic battery cell suppliers for our most important markets and the first MEB models, and we aim to initiate further long-term strategic partnerships in China, Europe and the USA. Looking ahead, we are already preparing for the next generation: together with partners, we aim to develop solid-state batteries to market readiness.

As part of the joint involvement of our Group brands Volkswagen Passenger Cars, Audi and Porsche in the pan-European High-Power Charging (HPC) joint venture IONITY, a comprehensive charging infrastructure is being built to safeguard long-distance mobility: by 2020, we aim to jointly build and operate fast-charging stations at 400 locations along major transport arteries in Europe.

As part of forward-looking mobility concepts, the Volkswagen Group is also working on robot-based service solution
for a variety of tasks. Rapid charging of an electric vehicle for example – be it in the user’s garage at home, in underground car parks or in car parks – is something that could be done by a service robot in the future: when the driver gets out of the vehicle in front of the car park, their self-driving electric car autonomously looks for a free parking space and is charged there by “CarLa” – a charging robot that the Volkswagen Group and automation specialist KUKA presented at the Geneva International Motor Show in 2018.

In view of the growing importance of e-mobility, lightweight automotive engineering is considered a key technology for future competitiveness because a lighter vehicle weight increases the range of electric vehicles. Our Material Research team plays a major role in the Open Hybrid LabFactory, a public-private partnership in which various industry and research partners work together to develop lightweight construction solutions for mass production.

We are actively involved in public projects to help shape the framework conditions for the approval and introduction of our own self-driving system. The experience we are gathering here will benefit the Group brands and thus also our customers.

Key R&D figures
In fiscal year 2018, we filed 7,639 (6,566) patent applications worldwide for employee inventions, around half of them in Germany. The fact that an ever increasing share of these patents is for important cutting-edge fields underscores our Company’s innovative power. These fields include driver assistance systems and automation, connectivity, alternative drive systems and lightweight construction.

The Automotive Division’s total research and development costs in the reporting period were 3.8% higher than in the previous year; their percentage of the Automotive Division’s sales revenue – the R&D ratio – came to 6.8 (6.7)%. Along with new models, above all the main focus was on the electrification of our vehicle portfolio, a more efficient range of engines, digitalization and new technologies. The capitalization ratio was 38.4 (40.0)%. Research and development expenditure recognized in profit or loss in accordance with IFRSs increased to €12.1 (11.6) billion.

As of December 31, 2018, our Research and Development departments – including the equity-accounted Chinese joint ventures – employed 51,948 people (+5.3%) Group-wide or 7.8% of the total headcount.

PROCUREMENT

In fiscal year 2018, the main task for Procurement was once again to safeguard the supplies and to help create competitive, innovative products and optimize cost structures. In addition, we continued to digitalize procurement processes.

Procurement strategy

A global network of strong business partners and suppliers is paramount for achieving the goals of the Group strategy known as TOGETHER – Strategy 2025. We are implementing our Group-wide vision TOGETHER – Best in Customer Value and Cost with our procurement strategy 2025. This involves using our strengths to deliver products with a high customer value and optimum cost structures that meet the needs of the market. We integrate knowledge from our global supplier networks, secure expertise for the global procurement markets of the future and ensure well-timed industrialization and market implementation in line with cost requirements. Six goals were agreed upon with the brands and regions:

- Access to supplier innovations
- Active cost structures
- Forward-looking structures
- People, expertise and attractiveness
- Supply chain excellence
- Group-wide synergies

We intend to achieve these goals with initiatives that accomplished noticeable results in 2018.

By simplifying technical component concepts and bringing these into line with global standards, we generated significant savings. Based on these results, we are now rolling out the approaches to other regions and vehicle projects. Over half of our purchasing projects have already benefited from an extended cost analysis.

We have secured important innovations for the Company with our innovation contracts. In the case of new technologies, we selected suitable partners early on to allow innovations to be implemented in the market.

We are tackling the challenges of the transformation in our procurement markets by setting up a Connectivity, eMobility & Driver Assistance Systems division. The redesign of our procurement process for software and data will pave the way for partnerships that are secure for the future.

Implementation of the Group Procurement Suite is a means of revamping our procurement systems, automating procurement operations and facilitating the support of strategic procurement activities through analyses and artificial intelligence.

Volkswagen FAST – Supplier network as the basis for success

FAST is the central initiative of Group procurement, introduced in 2015 with the aim of making the Volkswagen Group and its supply network future-proof. The goal of FAST is to successfully implement the key topics of innovation and globalization by involving suppliers at an earlier stage and more intensively. The FAST initiative enhances the quality and speed of collaboration with our key partners, and thus enables us to coordinate global strategies and points of technological focus even more closely. The common goal is to make impressive technologies available to our customers more quickly and to implement worldwide vehicle projects more effectively and efficiently.

After incorporating additional partners into the FAST program in 2017, we worked with these partners in the reporting period to exploit the benefits of the strategic integration.

Digitalization of supply

We are working systematically to implement a completely digitalized supply chain. This will help us to ensure supply, leverage synergies throughout the Group and become a leader in terms of cost and innovation. We are therefore creating a shared database and using innovative technologies to enable efficient, networked collaboration in real time – both within the Group and with our partners. The cornerstone for the future of Procurement was laid in 2018 in the form of Group Procurement’s digitalization strategy. This strategy aims not only to eliminate the weaknesses of Procurement’s IT system environment but also to increase the organization’s effectiveness, efficiency and future viability.

Structure of key procurement markets

Our procurement is organized at global level, with a presence in the key markets around the world. This ensures that production materials, investments in property, plant and equipment, and services can be procured worldwide to the quality required on the best possible terms. Networking of the brands’ procurement organizations enables us to leverage synergies across the Group in the various procurement markets.

In addition to the brands’ procurement units, the Volkswagen Group operates eight regional offices. In growth markets, we identify and train local suppliers to generate cost advantages for all the Group’s production sites. In familiar and established markets, the regional offices support access to the latest technologies and innovations.
Supply situation for purchase parts and upstream materials
Systematic safeguarding of the supply of purchase parts is one of Procurement’s goals. As a result of the new WLTP test procedure and the related changes in the production programs, we required a high degree of flexibility from our suppliers. Adverse effects on production in the Group caused by unforeseeable events such as natural disasters were minimized to the best of our ability.

Management of purchased parts and suppliers
The importance of managing purchased parts and suppliers is steadily growing due to the continued globalization of supply chains. We support and supervise the processes from development to series production of the purchased parts, making a substantial contribution to ensuring production start-ups for vehicles and powertrains all around the world. Our activities in purchased parts management focus on safeguarding component quality and the industrialization process at the individual supplier locations. At the same time, increased complexity in the automotive industry requires regular monitoring and safeguarding of supplies for series production. In order to identify any disruptions at an early stage and take necessary countermeasures, we simulate series production at suppliers as part of the pre-production process. Purchased Parts Management works closely with Quality Assurance at the production sites and conducts multi-stage performance testing.

Sustainability in supplier relationships
Successful relationships with our business partners are based on observance of human rights, compliance with occupational health and safety standards, active environmental protection and combating corruption. These sustainability standards are defined in the contractually binding Volkswagen Group requirements for sustainability in relations with business partners (Code of Conduct for Business Partners).

Especially in view of the more stringent sustainability requirements being imposed worldwide, training and professional development for our suppliers is a key aspect of our sustainability in supplier relationships concept. By the end of the reporting period, more than 31,000 supplier locations had completed our online training program since 2012. In the Asia-Pacific, South America and European regions, we trained over 900 employees from more than 550 suppliers at face-to-face events addressing topics such as sustainability, and informed them of region-specific challenges. In addition, we raised awareness of sustainability risks in Procurement with face-to-face events attended by over 2,000 Procurement employees.

Our supplier checks for verifying compliance with sustainability requirements retained their importance in 2018. For this reason, we once again considerably increased the number of checks performed year-on-year and conducted local audits at 947 supplier locations. In 551 cases, an action plan was agreed upon that led to an improvement in suppliers’ sustainability performance. Furthermore, checks of more than 28,000 supplier locations were carried out by means of questionnaires relating to sustainability since 2012, allowing improvements in sustainability performance to be achieved in more than 2,100 cases during the reporting period.

In 2018, we also decided to introduce a comprehensive sustainability rating for the awarding of contracts in which the criteria environment, society and compliance will be systematically reviewed prior to the conclusion of all contracts starting in 2019. Only suppliers with a positive sustainability rating will have the opportunity to enter into a business relationship with us.

COMPONENTS BUSINESS
A realignment of the Group-wide components business was decided upon as part of the future program TOGETHER – Strategy 2025. The aim is further improvement in competitiveness through cross-brand management of components activities and a value creation strategy coordinated throughout the Group. For traditional technologies and topics of the future, synergies will be leveraged to advance the progressive transition to e-mobility.

The expertise of the components business, which employs some 80,000 people worldwide, lies in the development and manufacture of vehicle components. In order to realign these competencies in a future-oriented way, it was decided as part of the Group strategy to combine components activities around the world into an independent entity, Volkswagen Group Components.

To this end, five new business areas were formed in 2018: Engine and Foundry, Transmissions and Electric Drive Systems, E-Mobility, Chassis and Seats. In each of the five business areas, the different departments such as Development, Procurement and Production will cooperate closely at an early stage to boost innovative power and competitiveness.

To achieve efficiency targets, manufacturing and administration processes will consistently be made leaner; shop floor management, which ensures uniform communication between management, foremen and employees, will be enhanced and savings will be generated by implementing optimization measures at the sites.

For its product portfolio, the components business relies on sustainable economic products. Products that are not
competitive will be progressively phased out in the medium to long term. E-mobility components will instead become an integral part of the portfolio.

Employees who take on new responsibilities in this respect will receive appropriate training.

**PRODUCTION**

Our global, cross-brand production network safeguards the processes from the supplier to the factory and assembly line, and from the factory to dealers and customers. Enduring efficiency is a prerequisite for our competitiveness. We meet challenges of the future with holistic optimizations, forward-looking innovations, flexible supply streams and structures, and an agile team. In fiscal year 2018, the global vehicle production volume surpassed the previous year’s level, reaching 11.0 million units. Productivity increased by around 5.3% year-on-year, despite the continuing difficult conditions in many markets.

“Intelligently networked” production strategy

Production is supporting the future program TOGETHER – Strategy 2025 with their “intelligently networked” functional area strategy. By intelligently connecting people, brands and machines, we aim to pool the strengths and potential of our global production and logistics and take advantage of the resulting synergy effects. We are guided in this by four strategic goals:

- Versatile production network
- Efficient production
- Intelligent production processes
- Future-ready production

With division-specific initiatives we have created content clusters in which expert teams work on the strategic topics relevant for production in the Group. Examples include the competitive design of our global production network, the reduction and offsetting of environmental impact throughout the production process, and digitalization with its implications for production and working processes and for collaboration. The overarching aim is to increase productivity and profitability.

With the production strategy, we have laid the foundations for the successful and sustainable enhancement of our production. We use regular reviews to ensure that we constantly align our activities to the current challenges.

**Global production network**

With twelve brands and 123 production locations, aspects such as consistent standards for product concepts, plants, operational equipment and production processes are key to forward-looking production. These standards enable us to achieve synergy effects, respond flexibly to market challenges, make optimal use of a flexible production network and realize multibrand locations. Currently, almost half of the 45 passenger car locations are already multibrand locations. The Bratislava site continues to serve as a prime example, producing vehicles for the Volkswagen Passenger Cars, Audi, Porsche, SEAT and SKODA brands. The newest multibrand location is Wolfsburg, where production of the SEAT Taraco began in the autumn of 2018.

The Volkswagen Group has set itself the goal of becoming one of the world’s leading providers of battery-electric vehicles by 2025. The basis for this is the introduction of the Modular Electric Drive Toolkit MEB, which we will use to complement our range with additional battery-electric vehicles.

In order to design multibrand projects and for electric mobility to be cost-effective in conjunction with existing concepts, it is important to make production highly flexible and efficient. Making maximum use of potential synergy effects is also a decisive factor for the success of future vehicle projects. Using common parts and concepts as well as identical production processes enables reduced capital expenditure and provides the opportunity to better utilize existing capacities. The future will also see electric vehicle projects at multibrand locations such as Zwickau, Germany and Anting, China.

We are constantly enhancing our production concepts and aligning them with new technologies. The targeting process anchored in our strategy serves to realize ambitious targets in individual projects as part of a cross-divisional approach.

**Production locations**

The Volkswagen Group’s production network is comprised of 123 locations in which passenger cars, commercial vehicles and motorcycles, as well as powertrains and components are manufactured.

With 71 locations, Europe remains our most important production region for vehicles and components. There are 28 sites in Germany alone. The Asia-Pacific region has 34 locations. We have five locations in North America and nine in South America. The Group operates four locations in Africa.

Capacity utilization of the locations in the Volkswagen Group’s production network is further enhanced by supplying the locations with complete knock-down (CKD) kits for local assembly.
The Group’s production system
Our aim is to continuously and sustainably improve our production workflows at all the brands’ and regions’ locations. A key component for achieving excellence in processes in production and production-related environments is the Group production system; we are further consolidating this and increasing the extent to which it is used.

Leadership and individual responsibility are the foremost factors, embedded in a culture of respect and collaboration. A factory must work at optimal capacity if it is to achieve the goal of continuing to manufacture high-quality products that give customers maximum benefits at competitive prices. This is made possible by the standardization of production processes and operating equipment early on in the line, based on the principle of concept consistency. This ensures that common design principles, joining techniques and joining sequences, but also installation and connection concepts are applied in the brands’ development and production areas. The principle of concept consistency is used to establish a foundation for creating efficient logistics and manufacturing processes.

New technologies and product innovations
3D printing is one of the key technologies for Industry 4.0 and digitalizing the automotive value chain. The process opens up wholly new opportunities in the areas of development, design and production. Due to the digital nature of the technology, which requires no tools whatsoever, components can be flexibly implemented directly from digital drawings, and completely new designs and component geometries can be created. The technology of 3D printing has been successfully used for building prototypes for many years now and has advanced rapidly in recent years – also accompanied by new areas of application at Volkswagen. The specific characteristic of this technology, an additive manufacturing technique, is its influence along the entire automotive value chain. It is used for early design studies, for building prototypes, for manufacturing tools and operational equipment, for producing parts in small batches and for the manufacturing of replacement parts in after sales. The materials available for 3D printing range from plastics to fiber composite materials and metallic materials.

However, there is still a long way to go before large-scale automotive production applications are possible. Here, Volkswagen leverages the diversity of the Group, achieved through close collaboration between its brands, and cooperates with leading technology providers and research institutions. For example, the Volkswagen Passenger Cars brand has partnered with printer manufacturer HP and component producer GKN Powder Metallurgy to become the first automaker to use HP Metal Jet, the latest 3D printing technology.
Where the design and introduction of new production technologies is concerned, affected staff are involved in the redesign of workplaces and processes from the outset. This is an important prerequisite if new technologies and solutions are to find the necessary acceptance.

**Environmentally efficient production**

One element of the production strategy is the environmentally exemplary production initiative. This involves us working on four key issues in the period leading up to 2025:

- Setting and achieving ambitious environmental targets for production
- Developing a long-term vision for environmental targets in production and rolling it out across the Group
- Strengthening employees’ environmental awareness and integrating relevant environmental aspects into processes
- Achieving top positions in renowned environmental rankings

In this context, the Volkswagen Group has set itself the goal of reducing the five key environmental indicators of energy and water consumption, waste for disposal, and CO₂ and VOC emissions in production by 45% for each vehicle produced by 2025 – starting from 2010 levels. This objective applies to all of the Group’s production locations and is derived from our environmental requirements for production processes, which are anchored in the Group’s environmental principles. The charts above show the development of these indicators.

We are encouraging networking and communication between the brands worldwide in order to leverage synergies. Our environmental experts meet regularly in working groups; in addition, we train our employees on the topic of environmental protection.

To identify and implement site-specific cost-cutting measures, the Environmental Task Force analyzes manufacturing processes, factory supply systems and resource and energy flows at the Group’s locations and evaluates the impact of the efficiency measures. Based on the experience from the analyses in several brands and regions, the team can systematically reinforce and spur on the transfer of measures.

We record and catalog environmental measures in an IT system and make these available for a Group-wide exchange of best practices. In the reporting period, around 1,500 implemented measures in the area of environment and energy were documented in this system. They serve to improve infrastructure and production processes for passenger cars and light commercial vehicles. These activities are beneficial from an environmental and economic perspective.

### Key Environmental Indicators for Production in the Volkswagen Group

**Energy Consumption**

---

¹ Production of passenger cars and light commercial vehicles. Prior-year figures adjusted.
² Change 2018 as against 2010.
³ Volatile organic compounds (VOCs).
With a series of effective, innovative measures, we were once again able to reduce environmental indicator levels in the reporting period, while at the same time improving production processes.

Green logistics

Logistics contributes to the Volkswagen Group’s focus on the environment by analyzing the emissions of the entire transport chain. The Green Logistics initiative promotes alternative means of transport and sustainable, energy-efficient transport systems.

Building on the dialog established between Group Logistics, Scania, forwarders, authorities and oil companies at the LNG Truck Day in September 2017, the concept of LNG trucks (liquefied natural gas) will now be put into practice. The aim is to have LNG trucks drive on many routes in the future, which will require an appropriate fuel station network. Together with its service providers, Group Logistics is planning to deploy approximately 100 LNG trucks in northern Germany in the medium term. The first trucks hit the roads in January 2019.

Where transport activities are concerned, maritime transport represents another important starting point for reducing CO₂ emissions. In mid-2019, Volkswagen Group Logistics will put two LNG-powered charter ships into service. The low-emission LNG ships will transport vehicle models produced by the Volkswagen Group between Europe and North America.

To ensure that our employees can provide the best possible support along the path to achieving our environmental targets and can also help shape this path, in-house training courses on green logistics and lectures at universities are a fixed part of the vocational training program.

SALES AND MARKETING

As part of our future program, we have developed a sales and marketing strategy aimed at exciting customers on a whole new level under the slogan “customer delight”. We regard ourselves as an innovative and sustainable mobility provider for all commercial and private customers worldwide – with a unique product portfolio encompassing twelve successful brands and innovative financial services.

In the 2018 fiscal year, we achieved a milestone in our TOGETHER sales strategy: together with their sales partners and importers, our passenger car brands agreed on a procedure for integrating innovative products and services into the sales network. The priority is safe handling of customer data and the way in which this is processed for digital products and services or in connection with the vehicle purchase. The legal requirements for handling customer data have been tightened in many countries. At the same time, new Group vehicles that are permanently connected to the Internet are about to be launched. We are increasingly investing in distribution systems and processes with the goal of further digitalizing and improving the individual customer experience in all distribution channels.

Optimal coverage of markets, customer segments and customer budgets is at the heart of a strategic Group initiative. To this end, we are establishing automobile-specific customer segmentation to steer the positioning of our brands. At the same time, we are examining global markets for potential revenue sources. This methodology has already been established for Europe and China and was rolled out to further markets including the United States and Brazil in 2018. It will be continuously applied in the strategy and product process and regularly reviewed and adjusted as necessary whenever new market requirements arise.

Customer satisfaction and customer loyalty

The Volkswagen Group aims its sales activities at exciting its customers. This is our top priority, as excited customers remain loyal to our brands and recommend our products and services to others. In addition to satisfaction with our products and services, we value our customers’ emotional connection to our brands. It is important for us to retain customers and win new ones. To measure our success in this area, we compile and analyze two strategic indicators for the major passenger car-producing brands:

> Loyalty rate. Proportion of customers of our passenger car brands who have bought another Group model. The loyalty of Volkswagen Passenger Cars, Audi, Porsche and ŠKODA customers has kept these brands in the upper loyalty rankings in the core European markets in comparison with competitors for a number of years even though the Volkswagen Passenger Cars and Audi brand have seen a slight decrease in the loyalty rate as a consequence of the diesel issue. Compared to other manufacturer groups, the Volkswagen Group continues to hold a top spot in the core European markets in terms of loyalty, with a considerable margin over the competition.

> Conquest rate. Newly acquired passenger car customers as a proportion of all potential new customers. Here, too, the Volkswagen Group has a top ranking in comparison with competitors, primarily thanks to the good scores achieved by the Volkswagen Passenger Cars brand.

In the core European markets, the downward trend in brand image and brand trust at the Volkswagen Passenger Cars brand as a consequence of the diesel issue did not continue in 2018. After the first signs of recovery had been seen in 2017, the figures continued to stabilize in the reporting period. Porsche remains in top position in the image ranking.
We also use a strategic indicator to measure the satisfaction of customers with our products and services in the truck business:

- **Customer satisfaction.** In the markets relevant for the Volkswagen Group, we aim to be one of the industry leaders in terms of the satisfaction rate for our commercial vehicle brands. To evaluate these criteria, we use customer satisfaction studies, which again delivered exceedingly positive satisfaction figures in line with our targets in the reporting period.

In the financial services business, we use two strategic indicators:

- **Customer satisfaction.** Satisfaction of our customers results from a customer-oriented product range and the service focus of our staff. In the annual assessment, these two aspects serve as suitable indicators for the critical evaluation as to whether we will achieve our customer satisfaction target of 90% in 2025. In 2018, we were within the expected range with a satisfaction rate of 82%. Our goal is to satisfy our customers completely. To do so, we are developing current measures at country level.

- **Customer loyalty.** Trust in and loyalty to our services rely on customer satisfaction with our product range and service. New contract rates are regularly determined based on product sales to our customers – financing and leasing agreements for purchases of new Volkswagen Group vehicles. Currently at 20%, these are proof of customers’ trust in our financial services. With ambitious targets of 50% for 2025, we underscore the focus on fulfilling the needs of our customers.

### E-mobility and digitalization in Group Sales

As part of our Roadmap E, we aim to offer our customers around the world more than 80 new electric models, including around 50 pure battery-electric vehicles and 30 plug-in hybrids by 2025. This campaign will be complemented by vehicle-related, customer-focused offerings, such as customized charging infrastructure solutions and mobile online services. This is turning the Volkswagen Group from an automotive manufacturer into a mobility service provider, posing completely new challenges for sales.

We are making highly targeted use of the opportunities of digitalization in sales, which include an improved customer approach. Our actions are guided by a clearly defined strategy that requires extensive cooperation between the brands to achieve the greatest possible synergies. Our aim here is to create a completely new product experience for the customers of our brands – one which impresses with its seamless communications, from the initial interest in purchasing a vehicle, to servicing and ultimately to the sale of the used car.

In doing so, we are opening up new business models relating to every aspect of the connected vehicle – in particular with regard to mobility and other services. Vehicles are becoming an integral part of the customer’s digital world of experience.

We also gear our internal processes and structures to the methods and new forms of working created by digital innovation. The result is project teams operating across different business areas, new forms of cooperation, a more intensive relationship with the international start-up scene, a consolidation of venture capital expertise – as a form of supporting innovative ideas and business models – as well as new lean systems and cloud-based IT solutions.

### Fleet customer business

Business relationships with fleet customers are often long-term partnerships. In a volatile environment, this customer group guarantees more stable vehicle sales than the private customer segment.

The Volkswagen Group has an established base of business fleet customers in Germany and the rest of Europe in particular. Our extensive product range enables us to satisfy their individual mobility needs from a single source.

In the German passenger car market, which declined as a whole by 0.2% in 2018, the share of fleet customers in total registrations fell to 13.6 (14.1)%. The Volkswagen Group's share of this customer segment decreased to 44.0 (44.7)%. Outside Germany, the Group's share of registrations by fleet customers in Europe remained stable at 25.2 (25.2)%. The upward trend until August shows that fleet customers still have considerable confidence in the Group. The temporary limitation of the model range as a consequence of the changeover to the WLTP had a negative impact from September 2018 onwards.

### After Sales and Service

In addition to individual service, the timely provision of genuine parts is essential to ensure passenger car customer satisfaction in After Sales. The genuine parts supplied by our passenger cars brands and the expertise of the service centers represent the highest level of quality and ensure the safety and value retention of our customers’ vehicles. With our global after sales network including more than 130 of our own warehouses, we ensure that almost all our authorized service facilities around the world can be supplied within 24 hours. We regard ourselves as a complete provider of all products and services relevant to customers in the after sales business. Together with our partners, we ensure the worldwide mobility of our customers. The partner businesses offer the entire portfolio of services in all vehicle classes. We are continuously expanding our range of tailored services in...
order to improve convenience for our customers and increase customer satisfaction.

In the Digital After Sales project, we are modernizing processes and IT systems in After Sales. By adopting an approach that focuses product and service development on the specific needs of both dealers and customers, we aim to reduce the time needed for administrative tasks at the dealers through automated, interrelated services and also stabilize existing IT systems and boost efficiency. Innovative digital after-sales services will additionally improve the customer experience.

Around the world, our commercial vehicles business also prides itself on products of the highest quality and on customer focus. Our range of trucks, buses and engines is complemented by services that guarantee fuel efficiency, reliability and good vehicle availability. The workshop service and service contracts offer customers a high degree of certainty, in addition to a high level of quality. We are reducing servicing times and costs with a view to the vehicles’ total operating costs and helping to retain their value.

In the Power Engineering segment, we help our customers ensure the availability of machinery with MAN PrimeServ. The global network of more than 100 PrimeServ locations guarantees excellent customer focus and offers, among other things, replacement parts of genuine-parts quality, qualified technical service and long-term maintenance contracts.

GROUP QUALITY MANAGEMENT

The quality of our products and services plays a key role in maintaining customer satisfaction. Customers are particularly satisfied and loyal when their expectations of a product or service are met or even exceeded. Appeal, reliability and service determine quality as it is perceived by the customer throughout the entire product experience. Our objective is to positively surprise our customers and fill them with enthusiasm in all areas, and thus to win them over with our outstanding quality.

Strategy of Group Quality Management

We embody outstanding quality and ensure dependable mobility for our customers worldwide – this is the strategic goal that guides the work of Group Quality Management. Group Quality Management and the brands’ quality organizations play an active role at all stages of product emergence and testing, making an important contribution to successful product launches, high customer satisfaction and low warranty and goodwill costs.

In consultation with the brands, we developed the Group Quality Management strategy as part of our future program TOGETHER – Strategy 2025. Focal areas include digitalization, new technologies and business fields, as well as uniform processes, methods and standards at all brands.

Advancing digitalization is also a major challenge for the Volkswagen Group: an ever increasing number of digital products and services is being developed and brought to market. To continue to ensure our customary level of quality and safety amid this diversity, we must adapt our quality measures accordingly. For example, the increased functional diversity and complexity of the driver assistance systems, extending all the way to autonomous vehicles, means that the software is also growing in scope. We have therefore introduced the processes and structures of what are known as smart quality organizations in the Group and the brands, completing this in the reporting period. Among other things, smart quality organizations refine the methods we use to support the development of software for selected critical features, and with which we can ensure that quality requirements are met. At the same time, we are taking advantage of the progress in digital technology to further optimize our existing processes and structures. For example, we use virtual measurement technologies or big data analyses when vehicles on the market encounter quality problems.

The strategy of Group Quality Management developed in this context comprises the following four goals:

- We will impress our customers with our outstanding quality by understanding what exactly they perceive as quality and implementing this in our products.
- We will contribute to competitive products with optimal quality costs by ensuring robust processes, thereby reducing the expense involved in testing each vehicle.
- In critical business processes, we will reinforce the principle of multiple-party verification and monitor achievement of milestones even more closely.
- We will become an excellent employer by promoting the personal development of every single employee even more intensively.

To achieve our goals, we are working on a variety of quality initiatives. All are focused on the topics that are decisive to the success of the quality organizations in the Volkswagen Group.
Contributing to the Group’s strategic indicators
We use a strategic indicator to measure the contribution of Quality Management in the major passenger car-producing brands.

Tow-in 12 MIS. This indicator shows the number of vehicles that need to be towed to a dealer per 1,000 vehicles after 12 months in service (MIS). It includes all Group vehicles categorized as tow-ins by dealers in the German market. After a continuous fall in the number of Volkswagen Group tow-ins in the German market since 2014, a slight overall increase was recorded again in the 2017 production year. Of the six brands featured, Audi, SEAT and Porsche saw their performance improve year-on-year. The Volkswagen Passenger Cars, ŠKODA and Volkswagen Commercial Vehicles brands recorded a slight upward trend. The brands’ ratios for the 2017 production year are within or slightly above the target corridor in each case. Quality is the Volkswagen Group’s top priority. All of the Group brands are therefore striving to continuously reduce the number of vehicles that need to be towed to a dealer.

We also use a strategic indicator to measure our success in the truck and bus area:

Claims per vehicle 12 MIS Truck. This figure incorporates the number of claims related to liability for material defects per 1,000 vehicles after 12 months in service. MAN and Scania each collect this data for their products from across the globe. MAN recorded a slight increase in the number of claims at the beginning of the fiscal year due to a cross-sector problem that has now been resolved. Systematic quality management enabled both brands to keep their figures at a good level for the rest of the year.

Legal and regulatory compliance
The legal and regulatory compliance of our products is paramount in our work. We have further reinforced application of the principle of multiple-party verification – which involves mutual support and control between the divisions – and introduced additional important processes, including in software security. With effect from the reporting period, software development is accompanied by quality milestones at all brands, whereby all systems, components and parts that directly influence a vehicle’s safety, type approval and functioning and therefore require particular vigilance are safeguarded through multiple-party verification. At the series production stage, we are also ensuring even more stringently than before that the conformity checks on our products are carried out and assessed with the participation of all business units involved. This applies particularly to emissions and fuel consumption.

We are also placing even greater emphasis on our quality management system than before, reinforcing the process-driven approach Group-wide across all business areas. Quality management in the Volkswagen Group is based on the ISO 9001 standard, which was revised in 2015: the requirements of this standard must be met to obtain the type approval needed to produce and sell our vehicles. We conducted numerous system audits in the reporting period to verify that our locations and brands comply with the requirements of the standard. Particular focus was placed on assessing the risk of non-compliance with defined processes. Our quality management consultants pay attention to ensuring that these and other new requirements, as well as official regulations are implemented and complied with; they are supported in this endeavor by Group Quality Management.

With these and other measures, Group Quality Management is helping to ensure that we as a manufacturer meet the legal requirements, and that our products do so, too.

Observing regional requirements
Our customers in the different regions of the world have very diverse needs as far as new vehicle models are concerned. Another important task of Group Quality Management is therefore to identify and prioritize these regional factors so that they can be reflected in the development of new products and the production of established vehicle models – together with other important criteria such as the quality of locally available fuel, road conditions, traffic density, country-specific usage patterns and, last but not least, local legislation. We mainly use market studies and customer surveys to determine region-specific customer requirements.

To ensure that the perceived quality of our vehicles is at a level commensurate with that of our competitors, we already realigned our vehicle audit back in 2017 and tailored it more closely to regional customer needs. Every brand works together with the individual regions to decide how its product is to be positioned there. This enables us to strengthen the responsibility of the brands and invest less in features that do not resonate with customers. To ensure that the audit returns comparable results, consistent quality benchmarks apply across all markets and regions. We are continually adapting these to changing requirements. For more than 40 years now, we have been deploying auditors around the world to assess from the customer’s perspective the vehicles that are ready for delivery and to ensure that these vehicles comply with the benchmarks defined.
The Volkswagen Group is one of the world’s largest employers in the private sector. As of December 31, 2018, we employed 664,496 people, including the Chinese joint ventures, 3.5% more than at the end of 2017. The ratio of Group employees in Germany to those abroad remained largely stable over the past year: at the end of 2018, 44.1 (44.8)% of the employees worked in Germany.

Human resources strategy and principles of the human resources policy
With the human resources strategy “Empower to transform”, the Group is continuing with key and successful approaches to human resource management. These include the pronounced stakeholder focus on corporate governance, comprehensive participation rights for employees, outstanding training opportunities, the principle of long-term service through systematic employee retention and the aspiration to appropriately balance performance and remuneration. At the same time, the new human resources strategy is setting innovative trends. Hierarchies are being dismantled, and modern forms of working such as agile working – an approach whereby most responsibility for the work organization is transferred to the teams – are set to be expanded. In the future, collaborative robots will ease heavy physical work in factories and digital processes will simplify administration.

In the Human Resources division, we are guided by five overarching objectives:

› The Volkswagen Group aims to be an excellent employer with all of its brands and companies worldwide.
› Highly competent and dedicated employees strive for excellence in terms of innovation, added value and customer focus.
› A forward-looking work organization ensures optimal working conditions in factories and offices.
› An exemplary corporate culture creates an open work climate that is characterized by mutual trust and collaboration.
› The Company’s human resources work is highly employee-oriented while also aiming for operational excellence and providing strategic value-added contributions.

In the course of the 2018 reporting period, we continued to work on our diversity management program that we are rolling out throughout the Company. Given the cultural diversity in our global markets and the growing economic momentum, competitive success requires an ever-broader range of experience, world views, problem-solving and product ideas. The diversity of our staff provides potential for innovation in this area, which we aim to make better use of in the future. Mandatory rules on the percentage of women in management, combined with targets for the internationalization of senior management, are at the heart of diversity management at Volkswagen.

We are also driving large-scale cultural change to achieve greater openness and transparency in line with our corporate strategy. Seven Volkswagen Group Essentials formulated in 2018 provide shared values and the foundation for cultural change across all brands and companies:

› We take on responsibility for the environment and society.
› We are honest and speak up when something is wrong.
› We break new ground.
› We live diversity.
› We are proud of the work we do.
› We not me.
› We keep our word.

Group-wide activities such as team dialog encourage employees to analyze the Group Essentials.

In 2018, we also began to implement our new approach throughout Human Resources departments across the Group. Going forward, the development paths into management will be characterized by greater individual responsibility, transparency and practical relevance and will include employees from different levels of the hierarchy in the evaluation of candidates.

When implementing our Group strategy TOGETHER – Strategy 2025, we paid particular attention in the reporting period to the level of achievement regarding the goals set by the applicable strategic KPIs. For the passenger car-producing brands, we compile and analyze the following information:

› Internal employer attractiveness. The indicator is determined by asking respondents, as part of the Group-wide opinion survey, whether they perceive the respective company as an attractive employer. The target for 2025 is 89.1 out of a possible total of 100 index points. A score of 84.2 index points was achieved throughout the Group in the reporting period, contrasting with 85.2 points in the previous year.
Examination of The ability to recruit top talent is of decisive importance, particularly in view of the Company's transformation into a world-leading provider of sustainable mobility solutions and the associated development of new business fields. Using this strategic indicator, we check the positioning of the major passenger car-producing brands on the labor markets once a year with regard to graduates and young professionals. Rankings in surveys by renowned institutions, in which we aim to achieve top scores for all Group brands, serve as the basis for this.

Diversity index. As we establish diversity management across the Group, this strategic indicator for the active workforce is used worldwide to report the development of the proportion of women in management and the internationalization of top management. In particular, it underpins the objective of the human resources strategy, which is aimed at contributing to an exemplary leadership and corporate culture. The proportion of women in management amounted to 13.8% in 2018 and was therefore at the prior-year level; we aim to raise this to 20.2% by 2025. We aim to increase the level of internationalization in top management, the uppermost of our three management tiers, to 25.0% in 2025; in the past fiscal year this was 19.2 (18.7)%.

In the truck and bus business, we look at the opinion survey and cross-brand exchange of employees to identify how well strategic targets are being achieved:

Opinion survey. The sentiment rating is used to determine the level of employee satisfaction and identification with the company. The sentiment rating is calculated as the average score of all responses regularly submitted as part of the opinion survey. In the truck and bus business, the 2018 result amounts to 76.4 (74.7) index points and is therefore higher than the previous year's level.

Cross-brand exchange and rotation. The aim is to continuously intensify collaboration between the commercial vehicle brands. It is also designed to enable the creation of specialist and international networks at the same time. We use this indicator to analyze how many employees work at another brand through rotation. In 2018, this opportunity for career development again saw an increase in uptake.

One strategic indicator has been defined for the financial services business:

External employer ranking. This involves taking part in an external benchmarking, in general once every two years. The aim is to position ourselves as an attractive employer and identify measures to become a top-20 employer by 2025, not just in Europe, but globally. Volkswagen Financial Services AG was represented in various national and international best-employer rankings the last time it participated in 2016. In 12th place, it was among the top European employers in the "Great Place to Work" employer competition.

Training and professional development

At Volkswagen, our capacity for innovation and competitiveness depends to a large extent on the commitment and knowledge of our staff. Training at Volkswagen is organized systematically and according to the so-called vocational groups. These comprise all employees whose tasks are based on similar technical skills and who require related expertise in order to perform their jobs. A skills profile lays down the functional and interdisciplinary skills for each job and serves as a guide for training measures.

Volkswagen Group employees have access to a wide range of training measures – from further training in general Company-related issues to specific training or personal development programs. Thanks to these opportunities, Volkswagen employees are able to further develop and steadily deepen their knowledge throughout their working lives. In this process, they are also able to learn from more experienced colleagues, who pass on their knowledge as experts in the vocational group academies. Training measures are based on the dual training principle, which combines theoretical content with practical experience on the job by means of specific tasks.

New technologies can usefully complement learning and the transfer of expertise. The Volkswagen Group Academy, the central training organization in the Group, incorporates this idea into different projects. One example is the Education Lab, where the Volkswagen Group Academy conducts educational research, analyzes training trends and tests tech-
nologies at Volkswagen together with start-ups, thereby generating new ways to develop skills at the Company.

One branch of the Volkswagen Group Academy is the AutoUni. It provides the Group with knowledge that is relevant for the future by engaging in-house senior experts and universities. Its events are offered as programs and as cooperative study modules in what is known as a blended learning format, which combines classroom training with online content, supplemented by lectures and conferences.

Volkswagen is striking out in new directions with the Faculty 73 program it kicked off in October 2018. From 2019 onwards it will train 100 software developers per academic year who are needed for the digital transformation in the Company. The AutoUni program is designed for employees with basic IT skills as well as in-house and external candidates with other suitable basic qualifications.

Vocational training and cooperative education

The core component of training at Volkswagen is vocational training or for young people eligible to enter university, cooperative education (dual study programs combining university studies with on-the-job training). As of the end of 2018, the Volkswagen Group had trained 19,244 young people in approximately 50 trades. We have introduced the principle of dual vocational training at many of the Group’s international locations over the past few years and are continuously working on improvements. The Group’s vocational trainees predominantly learn their trade through dual vocational training. Once a year, Volkswagen honors its highest-achieving vocational trainees in the Group with the Best Apprentice Award.

Even after their vocational training has been completed, young people at the start of their careers are encouraged to continue their professional development in our Company. This is why we promote particularly talented young specialists in talent groups. These two-year development and training programs accept the highest-achieving 10% of fully qualified vocational trainees at Volkswagen AG each year. In addition, fully qualified vocational trainees have the option to work at a Group company outside Germany for twelve months as part of the “Wanderjahre” (Year Abroad) program. In the reporting period, 27 Volkswagen Group locations in 17 countries took part in this program.

Last but not least, we developed the AGEBI+ program. It promotes fully qualified vocational trainees who are eligible for university and wish to combine a degree program in subjects that are crucial for Volkswagen’s future with closely related practical experience.

Development of university graduates

Volkswagen offers two structured entry and development programs for university graduates and young professionals. In the StartUp Direct trainee program, graduate trainees gain an overview of the Company over two years while working in their own department and take part in supplementary training measures. University graduates interested in working internationally can participate in the 18-month StartUp Cross program. The aim here is to get to know the Company in all its diversity and to build up a broad network. During their participation in the program, young professionals become familiarized with several locations in Germany and other countries by working in various departments. Both programs also include several weeks’ experience working in production. In 2018, Volkswagen AG hired a total of 164 graduate trainees as part of these programs, 28.7% of whom were women.

Young people can also take part in graduate trainee programs at the other Group companies as well as at the Group’s international locations, such as SKODA in the Czech Republic, SEAT in Spain or Scania in Sweden.

Increasing attractiveness as an employer and target-group-specific development programs

A family-friendly human resources policy is a major component of Volkswagen’s appeal as an employer; in particular, it helps to achieve greater gender equality. We work continuously to develop family-friendly working time models and to increase the number of women in management positions. In line with German law on the equal participation of women and men in leadership positions (Führungs-Gleichberechtigung – German Act on the Equal Participation of Women and Men in Leadership Positions in the Private and Public Sectors), Volkswagen AG is aiming to have a 13.0% share of women at the first management level and 16.9% at the second management level by the end of 2021. As of December 31, 2018, the proportion of women in the active workforce at the first level of management was 10.7 (10.4)% and at the second level of management it was 15.4 (14.0)%.
For every board-level division in the Company we have set targets for the development of the proportion of women in management to encourage women with high potential to advance within the Company. This approach is supported by many different measures including cross-brand mentoring programs.

In recent years, a large number of company regulations have also come into effect in the Group to make it easier for employees to balance the demands of work and home life and allow staff to arrange their own individual working model. These include flexible working hours, variable part-time work and shift models, leave of absence programs enabling employees to care for close family members, childcare services that are connected to the company or are company-owned, and mobile working.

At Volkswagen AG, which entered into its works agreement for mobile working back in 2016, more than 17,800 employees are making use of a more flexible working arrangement as of the end of the reporting period.

Preventive healthcare and occupational safety
Volkswagen’s holistic healthcare management system also covers work organization, workstation design, behavioral ergonomics, psychosocial aspects, rehabilitation and reintegration into working life as well as programs for preventing lifestyle diseases.

In addition to conventional preventive healthcare and occupational safety, a free and comprehensive voluntary screening (the Check-up) is provided for all employees at almost all production sites. To maintain and improve employees’ health, fitness levels and performance, the Check-up is followed by measures to promote exercise, healthy eating and mental balance, for example.

Another important area for action in the Volkswagen Group is workstation ergonomics. Continuously improving these along the entire production chain and in all work processes is of great importance to us. Together with scientific partners, we are working resolutely to introduce state-of-the-art ergonomic workstations and innovative work processes in as many areas as possible.

Employee participation
Codetermination and employee participation are important pillars of our human resources strategy. Volkswagen aims to promote high levels of expertise and a strong sense of team spirit. This includes employees’ opinions, assessments and criticisms being heard.

With the opinion survey, a Group-wide poll, the Company not only regularly gathers information regarding employee satisfaction, but also inquires about the shape of our corporate culture and the manner in which, for example, compliance requirements are implemented. Based on the results, follow-up processes are implemented in which measures are developed and implemented. Over 600,000 employees from 175 locations and companies in 50 countries were invited to take part in the survey. The participation rate was 79%. The average result that is regularly received through the opinion survey – the sentiment rating – is an important parameter in the opinion survey: in 2018 it stood at 78.9 out of a possible total of 100 index points. The score achieved in 2018 was thus slightly higher than the previous year’s figure that amounted to 78.3 points.

In addition, we also encourage our employees’ commitment through idea management: employees can use their creativity and knowledge to contribute their ideas for improvements, thus helping to streamline workflows, further enhance ergonomics in the workplace, reduce costs and continuously increase efficiency. Idea management enables employees to participate actively in the planning and organi-
zation of their work. The system also provides monetary incentives by offering set rewards.

INFORMATION TECHNOLOGY (IT)

Volkswagen is working hard on strengthening its digital competencies with a view to shaping and safeguarding the Company’s future viability. To this end we are continuously upgrading our IT systems so that they are sustainable in the long term and we are progressively moving our systems and applications over to new cloud platforms. Our primary concern is further increasing the efficiency of the IT systems used throughout the Group and standardizing these as far as possible. We are also concentrating on building up our expertise and specialist IT knowledge, especially in key digital technologies such as artificial intelligence and the use of new IT technologies in products, services and business processes.

Volkswagen is embracing on digitalization, particularly at its in-house IT labs in Wolfsburg, Munich, Berlin, San Francisco and Barcelona. Group IT, research institutions and technology partners are working closely together at these innovation centers on future trends in information technology, such as artificial intelligence and machine learning, quantum computing, digital ecosystems, intelligent human-robot collaboration and smart mobility. These labs act as test laboratories for the Group, as centers of expertise for these future trends and as liaison offices for start-ups. They enable us to work and experiment with new technologies outside the line organization. This allows the experience and strategic expertise of a large company like Volkswagen to be combined with the pragmatism and speed of young start-ups. Highly specialized experts at the IT labs in San Francisco and Munich, for example, are working on exploiting the potential of quantum computers for areas that have a commercial application. The focus here is on optimization of flows of traffic and simulation of materials and alloys. Initial experimental projects are also investigating opportunities for combining the potential of quantum computers with self-learning systems (quantum machine learning).

In IT test projects we are using artificial intelligence to develop so-called self-learning systems. These learn through intelligent data analysis and are, for example, designed to assist staff in recurring administrative work steps by preparing these activities independently and giving them to staff for a decision.

The growing convergence of different business areas and IT is also opening up opportunities. In production, for example, big data processes help us to analyze faulty machinery and take action at an early stage. Our experts from Production and Group IT are therefore working together on a digital platform that combines the systems and equipment in the factory into an integrated overall system. This will allow efficiency to be increased and digital pilot projects to be integrated into the existing architecture much more easily than before. Applied research in the field of intelligent human-robot collaboration and IT systems to control mobile assistive robotics and networked infrastructure (Industrial Internet of Things) are also important elements of the digitalization of production at the Volkswagen Group. Group IT is likewise contributing its expertise in the field of research and development in conjunction with the different departments. For instance, digitalized work tools such as the virtual concept vehicle make the product development process faster and more efficient.

In software development centers we develop cross-brand software for digital ecosystems and for new business processes in the Group. We thereby maintain in-house expertise in the rapid, demand-oriented development of software and IT solutions. This capability will become increasingly important as the Group’s digital transformation evolves.

The “IT for everyone” initiative aims to give all employees of Volkswagen AG access to digital media and work tools. The objective is to further improve communication and collaboration among production and administrative employees. An important issue in this connection is the growing volume of official work being performed on mobile devices. The Company’s internal network Group Connect promotes knowledge transfer and networking among all employees. The platform puts experts in touch with one another across brands and internationally. The introduction of the Group Connect application for personal mobile devices further simplifies access for employees of the direct units.

Safeguarding data and systems at the Volkswagen Group is another focus of our IT. To also protect our customers against cyber-attacks and ensure that our solutions are in conformity with national and international legislation, we continued setting up an integrated, cross-brand, cross-regional Information Security Management System (ISMS) as part of the Protected Customer program. The Group offers documents, templates and tools to all Group companies and brands in the form of an ISMS toolbox to help them implement their own ISMS. Key information security processes have been audited and certified within the international ISO 27001 framework. This is the most important standard for information security and extends beyond IT to
also cover issues such as personal security, compliance, physical security and legal requirements. One of the aims of the program, which is set to run until 2021, is also to safeguard the complete life cycle of our vehicles and the digital mobility services.

In fiscal year 2018, another focus of IT was on the systematic implementation of the General Data Protection Regulation (GDPR), which was combined in a Group program and rolled out in all corporate functions. In the course of the sustainable implementation of the GDPR, the data protection processes and procedures in place in the brands will be consolidated and standardized. When new IT solutions are being developed, the requirements will be enforced from the outset. Transparency in the processing and minimization of data are key goals on which we will continue to work. To ensure sustainable observance of the GDPR, the Group program will be gradually transferred to a company-wide data protection management system as well as a data protection organization in 2019.

In 2015, Volkswagen AG co-founded Deutsche Cyber-Sicherheitsorganisation GmbH (DCSO). DCSO is accumulating specialist knowledge on cybersecurity and aims to become the preferred service provider to European businesses in this field. DCSO is a competence center and a managed security service provider for protecting companies against criminal hackers, industrial espionage, government attacks and sabotage.

**ENVIRONMENTAL STRATEGY**

Protecting the environment is firmly anchored in the main goals of our future program TOGETHER – Strategy 2025. As a world-leading provider of sustainable mobility, we want to be a role model on environmental issues. We are working towards this goal, taking responsibility for the environment every single day. In striving to achieve our goal of becoming a role model, we consider the environmental impact throughout the entire product life cycle: from manufacturing (including the supply chain) to use and disposal. In addition to the global challenges of climate change, our approach also looks at other important environmental resources, particularly water, soil, air, energy and raw materials. We use major sustainability ratings as our benchmark and aim to achieve top rankings in these. To this end, we have defined the following target areas:

- To continuously improve our carbon footprint
- To continuously reduce harmful emissions
- To continuously reduce resource consumption

We use the decarbonization index (DCI) as a strategic indicator to document our progress. This measures the products’ CO₂ emissions along the entire value chain. The DCI is calculated from the ratio of the carbon footprint to the number of vehicles sold. It encompasses both direct and indirect CO₂ emissions at the individual production sites (Scope 1 and 2) as well as all further CO₂ emissions over the life cycle of the vehicles sold – from the extraction of raw materials, to vehicle use and final disposal of old vehicles (Scope 3). The DCI thus enables transparent, comprehensive tracking of progress toward climate-friendly mobility. We are currently defining the DCI target figures for 2025 together with the Volkswagen Group brands. The 2°C target of the Paris Agreement adopted at the UN Climate Change Conference in late 2015 serves as an important parameter for us in this endeavor.

We are also calculating the environmental impact reduction production indicator. We have set a target for the Group and brands to reduce the environmental impact of production by 45% per vehicle compared with 2010 levels. This indicator includes energy and water consumption, CO₂ and VOC emissions and the volume of waste; the charts on page 144 show the development of these indicators.

**Organization of Environmental Protection**

The Group Board of Management is the highest internal decision-making authority on environmental matters. Since 2012, it has simultaneously functioned as the Group’s Sustainability Board. The Group-wide management of environmental protection is the responsibility of the Group Steering Committee for the Environment and Energy, which is supported by numerous specialist bodies.

The brands and companies are responsible for their own environmental organization. They base their own environmental policies on the targets, guidelines and principles that apply throughout the Group. The Group Steering Committee for the Environment and Energy coordinates the brands and companies. It reports on progress to the Board of Management.

Environmental officers from throughout the Group meet regularly for the Group Environmental Conference in order to optimize the environmental focus along the entire value chain.

Our production sites, including the central development areas, are certified in accordance with ISO 14001 or EMAS (101 of 123 production sites in 2018). Many production locations have also certified their energy management systems in accordance with ISO 50001. Since 2009, the “Integration of environmental aspects into the product development at the Volkswagen brand” has also been certified in accordance with ISO TR 14062 in the Technical Development department at the Volkswagen Passenger Cars brand.
Biodiversity

Biodiversity means the variety of life on our planet, and covers the variety of species, the genetic differences within species and the diversity of ecosystems. We rely on it as the basis for our continued existence: healthy food, clean water, fertile soils and a balanced climate. Due to the global decline in biodiversity, the United Nations has declared the current decade to be the "UN Decade on Biodiversity".

Volkswagen has been committed to protecting biodiversity since 2007 and is a founding member of the Biodiversity in Good Company e.V. initiative. In our mission statement, we have committed to supporting the protection of species at all of our locations. For this, we are collaborating with local partners and suppliers. We are in the process of developing a suitable evaluation model to show the effect of biodiversity projects and promote biodiversity at our production locations. Our membership in Biodiversity in Good Company e.V. had been temporarily suspended as a result of the diesel issue, but we were reincorporated as an active member at the beginning of 2019.

Protecting biodiversity is an integral part of our environmental management. We contribute to achieving the targets of the UN Convention on Biological Diversity (CBD) by reducing greenhouse gas emissions and utilizing resources as efficiently as possible. Volkswagen supports networking between the various players in the fields of business, politics, society and academia with a view to increasing public awareness of biodiversity conservation and to increase knowledge of the issue.

SEPARATE NONFINANCIAL GROUP REPORT

REPORT ON POST-BALANCE SHEET DATE EVENTS

There were no significant events after the end of fiscal year 2018.
Report on Expected Developments

The global economic growth is expected to slow down somewhat in 2019. We also assume that global demand for vehicles will vary from region to region and remain at the prior-year level on the whole. With its brand diversity, broad product range and pioneering technologies and services, the Volkswagen Group is well prepared for the future challenges in the mobility business and the mixed conditions in the markets.

In the following, we describe the expected development of the Volkswagen Group and the general framework for its business activities. Risks and opportunities that could represent a departure from the forecast trends are presented in the Report on Risks and Opportunities.

Our assumptions are based on current estimates by third-party institutions. These include economic research institutes, banks, multinational organizations and consulting firms.

DEVELOPMENTS IN THE GLOBAL ECONOMY
Our forecasts are based on the assumption that global economic growth will slow down somewhat in 2019. We still believe risks will arise from protectionist tendencies, turbulence in the financial markets and structural deficits in individual countries. In addition, growth prospects will be negatively affected by continuing geopolitical tensions and conflicts. We therefore anticipate weaker momentum than in 2018 in both the advanced economies and the emerging markets. We expect the strongest rates of expansion in Asia’s emerging economies.

Furthermore, we anticipate that the global economy will also continue to grow in the period from 2020 to 2023.

Europe/Other Markets
In Western Europe, economic growth is likely to slow down in 2019 compared with the reporting period. Resolving structural problems continues to pose a major challenge, as do the uncertain impacts of the United Kingdom’s planned exit from the EU.

In Central Europe, we estimate that growth rates in 2019 will be lower than those for the past fiscal year. The economic situation in Eastern Europe should stabilize further, providing the conflict between Russia and Ukraine does not worsen. The growth of the Russian economy is expected to lose some of its momentum.

For Turkey, we expect the growth rate to taper off further amid higher inflation. The South African economy will probably be dominated by political uncertainty and social tensions again in 2019 resulting, in particular, from high unemployment. Growth is therefore likely to remain at a low level.

Germany
We expect that gross domestic product (GDP) in Germany will increase slower in 2019 than in the reporting period. The situation in the labor market will probably remain stable and bolster consumer spending.

North America
We assume that the economic situation in the USA will remain stable in 2019. GDP growth should be lower than in the reporting period, however. The US Federal Reserve could further raise the key interest rate throughout 2019. Economic growth is likely to continue to slow down in Canada and Mexico.

South America
The Brazilian economy will most likely stabilize further in 2019 and record somewhat stronger growth than in the reporting period. Amid sustained high inflation, the economic situation in Argentina is expected to remain tense.
Asia-Pacific
In 2019, the Chinese economy is expected to continue growing at a relatively high level, but will lose some of its momentum compared with prior years owing to the trade disputes with the USA. For India, we expect an expansion rate on a similar scale to the previous years. In Japan, growth is forecast to remain weak.

TRENDS IN THE MARKETS FOR PASSENGER CARS AND LIGHT COMMERCIAL VEHICLES
We expect trends in the markets for passenger cars in the individual regions to be mixed in 2019. Overall, global demand for new vehicles will probably be at the 2018 level. We are forecasting growing demand for passenger cars worldwide in the period from 2020 to 2023.

Trends in the markets for light commercial vehicles in the individual regions will be mixed again in 2019; on the whole, we anticipate a slight dip in demand in 2019. We expect a return to the growth trajectory for the years 2020 to 2023.

The Volkswagen Group is well prepared for the future challenges pertaining to the automotive mobility business and the mixed developments in regional automotive markets. Our brand diversity, our presence in all major world markets, our broad, selectively expanded product range and pioneering technologies and services place us in a good competitive position worldwide. Our goal is to offer all customers mobility and innovations suited to their needs and thus ensuring long-term success.

Europe/Other Markets
For 2019, we anticipate that the volume of new passenger car registrations in Western Europe will be in line with that seen in the reporting period. The uncertain impact of the United Kingdom’s planned exit from the EU is likely to further exacerbate the ongoing uncertainty among consumers, continuing to put a damper on demand. We expect to see slight growth in the Italian market in 2019, whereas growth momentum in Spain will probably slow somewhat. We anticipate volumes in the French passenger car market to be on a level with the previous year. In the United Kingdom, we estimate that new vehicle registrations in 2019 will be at the prior-year level.

For light commercial vehicles we expect demand in Western Europe in 2019 to narrowly miss the prior-year level owing to the uncertain impact of the United Kingdom’s planned exit from the EU. We estimate a marked decline in Italy and a moderate decline in the United Kingdom and France. In Spain, we anticipate a noticeable increase in demand.

Sales of passenger cars in 2019 are expected to slightly exceed the prior-year figures in markets in Central and Eastern Europe. In Russia, we anticipate a market volume that is slightly higher than in the previous year following the marked recovery in the reporting period. The number of new registrations should continue to grow in most of the other markets in this region.

Registrations of light commercial vehicles in the Central and Eastern European markets in 2019 will probably be somewhat lower than in the previous year. In Russia, we expect the market volume to decline perceptibly compared with 2018.

We anticipate a further substantial downturn in the passenger car market in Turkey. The volume of new registrations in South Africa in 2019 is likely to increase slightly year-on-year.

Germany
After a positive performance overall in recent years, we expect demand in the German passenger car market to fall slightly year-on-year in 2019.

We anticipate that registrations of light commercial vehicles will be around the previous year’s level.

North America
The volume of demand in the markets for passenger cars and light commercial vehicles (up to 6.35 tonnes) in North America as a whole and in the United States of America is likely to be slightly lower in 2019 than in the prior year. Demand will probably remain highest for models in the SUV and pickup segments. In Canada, the number of new registrations is also projected to be on a level with the previous year. By contrast, in Mexico we anticipate that demand will pick up slightly year-on-year.

South America
Owing to their dependence on demand for raw materials worldwide, the South American markets for passenger cars and light commercial vehicles are heavily influenced by developments in the global economy. We expect to see an overall moderate increase in new registrations in the South American markets in 2019 compared with the previous year. In Brazil, demand volume is expected to rise markedly again in 2019 following the increase in the reporting period. However, we anticipate that demand in Argentina will be perceptibly lower year-on-year.

Asia-Pacific
In 2019, the passenger car markets in the Asia-Pacific region are expected at the prior-year level. Demand in China should be around the previous year’s level. Attractively priced entry-level models in the SUV segment in particular should continue to see strong demand. For as long as there is no resolution in sight, the trade dispute between China and the United States will continue to weigh on business and
consumer confidence. In the Indian market we anticipate somewhat stronger growth than in the previous year. Japan’s market volume is forecast to diminish moderately in 2019.

The market volume for light commercial vehicles in 2019 will probably just miss the previous year’s figure. We are expecting demand in the Chinese market to fall noticeably short of the prior-year level. For India, we are forecasting a moderately higher volume in 2019 than in the reporting period. In the Japanese market, demand is likely to be moderately below the previous year’s level.

**TRENDS IN THE MARKETS FOR COMMERCIAL VEHICLES**

In the markets for mid-sized and heavy trucks that are relevant for the Volkswagen Group, new registrations in 2019 are set to be slightly up on the level seen in 2018. We anticipate a solid increase for the period from 2020 to 2023.

We assume that demand in Western Europe will taper off moderately year-on-year in 2019. In Germany, we expect the market to decline slightly compared to the previous year.

Central and Eastern European markets should record a moderate increase in demand. In Russia we expect to see a marked rebound in demand in 2019.

We assume that demand in the South America region will pick up perceptibly in 2019.

In the bus markets that are relevant for the Volkswagen Group, we anticipate a slight increase in demand in 2019 compared with the prior-year level. We forecast moderate growth for the market in Western Europe in the same period. In Central and Eastern Europe, we anticipate a slight drop in demand. In South America, new registrations will probably be moderately higher than the prior-year level.

For the period 2020 to 2023, we expect noticeable growth overall in the demand for buses in the markets that are relevant for the Volkswagen Group.

**TRENDS IN THE MARKETS FOR POWER ENGINEERING**

We expect the market environment in power engineering to remain difficult in 2019, with undiminished price and competitive pressures.

In 2019, the market volume for two-stroke engines used in merchant shipping is likely to reach a level similar to that seen in the reporting period. Calls for high energy efficiency and low pollutant emissions will continue to have a significant influence on ship designs in the future. We expect sustained stable demand in the market for four-stroke engines used in ferries, dredgers and government vessels. In the offshore sector, new order volumes of special applications look set to be on the low side due to existing overcapacity. Overall, we expect the marine market to remain at a similar level to that seen in the reporting period. The competitive pressure will continue unabated.

Demand for energy correlates strongly with macroeconomic and demographic trends, especially in emerging markets. The global trend toward decentralized power stations and gas-based applications shows no sign of losing momentum. For 2019, we expect demand to rise slightly but remain at a low level overall.

In turbomachinery, demand looks set to recover in 2019 due to price increases in our customers’ sales markets. As capacity utilization of their production facilities increases, the number of projects for turbocompressors is likely to rise. In energy generation, demand for steam and gas turbines will probably continue to vary from region to region. Sustained stable demand is expected in the countries with strong industrial growth or a low level of electrification. By contrast, electricity producers in the industrialized countries are still experiencing overcapacity. Possible growth will be satisfied above all by renewable energy sources, whose irregular electricity production requires a significant increase in storage capacity. As a consequence of the shortage of raw materials for batteries, we expect that the development and construction of thermal storage will be pushed, thereby invigorating the market for turbocompressors and turbocompressors. Overall, the price and competitive pressures will ease somewhat but remain high due to existing overcapacity.

We anticipate a positive trend in the marine and power plant after-sales business for diesel engines in 2019. In turbomachinery, we expect a slight upward trend.

For the period 2020 to 2023, we expect to see growing demand in the power engineering markets. The extent and timing of this growth will vary in the individual business fields, however.

**TRENDS IN THE MARKETS FOR FINANCIAL SERVICES**

We believe that automotive financial services will be very important for vehicle sales worldwide in 2019. We expect demand to continue rising in emerging markets where market penetration has so far been low, such as China. Regions with already developed automotive financial services will see a continuation of the trend towards enabling mobility at the lowest possible total cost. Integrated end-to-end solutions, which include mobility-related service modules such as insurance and innovative packages of services,
expect no more than a slight rise in interest rates in 2019. In monetary policy measures in the eurozone, we therefore continued to pursue this course. In light of further expansionary gradually drawing to an end, the European Central Bank.

In the USA that the extremely loose monetary policy was historic low level on the whole. While it became apparent in industrialized nations, key interest rates persisted at a overall economic environment. In the major Western expansionary monetary policy worldwide and the challenging year 2018 due to the continuation of the prevailing expan

INTEREST RATE TRENDS
Interest rates remained low with a few exceptions in fiscal year 2018 due to the continuation of the prevailing expansionary monetary policy worldwide and the challenging overall economic environment. In the major Western industrialized nations, key interest rates persisted at a historic low level on the whole. While it became apparent in the USA that the extremely loose monetary policy was gradually drawing to an end, the European Central Bank continued to pursue this course. In light of further expansionary monetary policy measures in the eurozone, we therefore expect no more than a slight rise in interest rates in 2019. In the United States of America, it is possible that the key interest rate will be raised again, depending on the future development of the economy. For the years 2020 to 2023, we anticipate a rise in interest rates, though the pace will vary from region to region.

COMMODITY PRICE TRENDS
Geopolitical and economic uncertainty in different forms caused the prices for many raw and input materials to vary in 2018. For example, average prices for raw materials such as iron ore, rare earths, natural rubber and lead fell, while prices for coking coal, crude oil, aluminium, copper and the precious metals palladium and rhodium, among others, rose. For the raw materials lithium and cobalt, which are relevant for e-mobility and also saw higher year-on-year average price levels, market prices eased in the course of the year. Based on analyses of factors of influence and trends in the commodity markets, we expect the prices of most commodities to rise in 2019. For the years 2020 to 2023, we continue to expect volatility in the commodity markets with prices trending upwards. We preventively analyze and limit these risks using system-based procurement methods. Long-term, stable supply agreements ensure that the Group’s needs are satisfied and guarantee a high degree of supply reliability.

NEW MODELS IN 2019
In 2019, the Volkswagen Passenger Cars brand will expand its range of SUVs worldwide by adding the T-Cross. The compact crossover model impresses with its striking design and an innovative interior concept, and will be available in Europe as well as in South America and China. In addition, the Passat will be revamped and fitted with a large number of new driver assistance systems. In the United States, the GLI, the sporty derivative of the Jetta, will enter the market. A new version of the Passat designed for the US market will also make its debut. The Passat will celebrate its market launch in South America. Plug-in hybrid versions of the Passat and Magotan will be launched in China. Furthermore, the e-Golf and derivatives of the Lavida and the Bora will complement the range of all-electric vehicles. The Teramont coupé and the revamped Sagitar and Magotan will round off the portfolio in China.

In early 2019, Audi will roll out the e-tron, the first all-electric model from the brand with the four rings. Other electric models are waiting in the wings. The product upgrades of the A4 and the Q7 will also raise the bar.

SKODA is redefining the compact class with the Scala. Based on the Modular Transverse Toolkit, the hatchback
represents the next step in the development of ŠKODA’s design language. The Kamiq, a completely new crossover model, will also expand the SUV family in Europe. It combines the merits of an SUV with the agility of a compact vehicle.

SEAT will present the first electric vehicle from the Spanish brand: a derivative of the Mii.

Porsche will start its rollout of the eighth generation of the 911 in 2019. This will be kicked off by the models 911 Carrera S and 911 Carrera 4S, followed by cabriolet models and the 911 Speedster. The Cayenne model range will be expanded in 2019 by the addition of the Turbo S with a plug-in hybrid drive and – for the first time ever – coupé models. Around mid-year, the new Macan Turbo will delight the first customers with its performance and everyday practicality. In the second half of the year, Porsche will focus on the market launch of the Taycan, with which the brand will take the next step into the age of e-mobility.

Bentley will deliver its first hybrid model in 2019, a derivative of the successful SUV Bentayga. In addition, the powerful Bentayga Speed will make its debut as the series’ latest top model. Further on in the year, this will be followed by the new Flying Spur, which will give customers a new driving experience with impressive performance and innovative technologies.

From the beginning of 2019, Lamborghini will start delivering the V12 top model Aventador SVJ to customers. Following this, the roadster version of the Aventador SVJ will also become available in the course of the year. The Huracán coupé and Spyder will receive a product upgrade in the form of a new design, higher performance and improved handling.

In 2019, Volkswagen Commercial Vehicles will put a product upgrade of the Multivan/Transporter on the market that features a revamped interior and exterior plus new information functions.

Scania will also work steadily on introducing new products and services in 2019.

MAN will bring out additional engines in 2019 that comply with the Euro 6d emission standard.

Ducati will launch numerous new models in 2019, including the Panigale V4 R, two versions of the Multistrada and four new members of the Scrambler family.

INVESTMENT AND FINANCIAL PLANNING

To ensure the Volkswagen Group’s future viability, we will continue to mobilize our pronounced strengths in innovation and technology further and vigorously invest in e-mobility, digitalization, new mobility services and autonomous driving in the coming years.

In our current planning for 2019, the majority of capex (investments in property, plant and equipment, investment property and intangible assets, excluding capitalized development costs) will be spent on new products and the continued rollout and further development of the modular toolkit. The focus is on the electrification and digitalization of our vehicles, in particular through the development of the Modular Electric Drive Toolkit (MEB). At the same time, we will primarily expand our SUV range further. We are also investing in the modification of selected locations for the production of electric vehicles. The Automotive Division’s ratio of capex to sales revenue will fluctuate around a level of 6.5–7.0%.

Besides capex, investing activities will include additions to capitalized development costs. Among other things, these reflect upfront expenditures in connection with the electrification and updating of our model range.

With the investments in our facilities and models, as well as in the development of alternative drives and modular toolkits, we are laying the foundations for profitable, sustainable growth at Volkswagen. These investments also include commitments arising from decisions taken in previous fiscal years.

We aim to finance the investments in our Automotive Division from our own capital resources and expect cash flows from operating activities to exceed the Automotive Division’s investment requirements. Cash outflows resulting from the diesel issue will negatively impact the cash flow again in 2019, but will probably be significantly lower than in the reporting period. Consequently, we anticipate a positive net cash flow for 2019 that will be up significantly on the prior-year figure.

The tendering of shares held by MAN’s noncontrolling interest shareholders as a consequence of the judgment issued on the award proceedings and the resulting termination of the control and profit and loss transfer agreement with MAN SE is reflected in the amount of €1.7 billion, reducing net liquidity.

Current estimates indicate that the change in the accounting for leases (IFRS 16), which entered into force in January 2019, will give rise to a negative one-off effect on the net liquidity reported by the Automotive Division, amounting to approximately 1% of the Volkswagen Group’s total assets.

We therefore expect net liquidity in the Automotive Division in 2019 to be down significantly on the level seen in the reporting period.

These plans are based on the Volkswagen Group’s current structures. A possible IPO of TRATON SE and related cash inflows are not taken into account.

Our joint ventures in China are included using the equity method and are therefore not included in the figures above. For 2019, the joint ventures plan to invest in e-mobility and the digitalization of their model range, in new technol-
ologies and mobility services, in strengthening their development and manufacturing capacity, and in new products. Their capex will exceed the 2018 level and be financed from the companies’ own funds.

In the Financial Services Division, we are planning slightly higher investments in 2019 than in the previous year. We expect the growth in lease assets and in receivables from leasing, customer and dealer financing to lead to funds tied up in working capital, of which around half will be financed from the gross cash flow. As is common in the sector, the remaining funds needed will be met primarily through unsecured bonds on the money and capital markets, the issuing of asset-backed securities, customer deposits from direct banking business, as well as through the use of international credit lines.

**TARGETS FOR VALUE-BASED MANAGEMENT**

Based on long-term interest rates derived from the capital market and the target capital structure (fair value of equity to debt = 2:1), the minimum required rate of return on invested capital defined for the Automotive Division remains unchanged at 9%.

In spite of the adverse effects of the special items on earnings, we exceeded the minimum rate of return on invested capital in the reporting period, with a return on investment (ROI) of 11.0(12.1)% (see also page 127). Invested capital will continue to increase further in 2019 as a result of investments in new models, in the development of alternative drives and modular toolkits and in future technologies. Invested capital will also rise as a consequence of the change in the accounting for leases (IFRS 16) that entered into force in January 2019. The return on investment (ROI) in the Automotive Division will probably exceed our minimum required rate of return on invested capital and be slightly higher than in the previous year.

**FUTURE ORGANIZATIONAL STRUCTURE OF THE GROUP**

As part of the changes in the management structure of the Volkswagen Group, the Volkswagen Commercial Vehicles brand will be allocated to the Passenger Cars segment from January 1, 2019 and the segment will be renamed Passenger Cars and Light Commercial Vehicles. Consequently, the Passenger Cars Business Area will then include the Volkswagen Commercial Vehicles brand in the financial reporting. The Commercial Vehicles segment will continue to comprise the Commercial Vehicles Business Area, but from January 1, 2019, will exclude the Volkswagen Commercial Vehicles brand. The Automotive Division will remain unchanged.

The following tables show the forecast-related effects that the reclassification of the Volkswagen Commercial Vehicles brand will have on the Passenger Cars and Commercial Vehicles Business Areas.

### SUMMARY OF EXPECTED DEVELOPMENTS

The Volkswagen Group’s Board of Management expects the growth of the global economy to slow somewhat in 2019. We still believe that risks will continue to arise from protectionist tendencies, turbulence in the financial markets and structural deficits in individual countries. In addition, growth prospects will be negatively impacted by continuing geopolitical tensions and conflicts. We therefore expect both the advanced economies and the emerging markets to show weaker momentum than in 2018. We anticipate the strongest rates of expansion in Asia’s emerging economies.

The trend in the automotive industry closely follows global economic developments. We assume that competition in the international automotive markets will intensify further.

We expect trends in the passenger car markets in the individual regions to be mixed in 2019. Overall, global demand for new vehicles will probably be at the prior-year level. We anticipate that the volume of new registrations for passenger cars in Western Europe will be in line with the figure seen in the reporting period. After a positive performance overall in recent years, we estimate that demand in the German passenger car market will fall slightly year-on-year. Sales of passenger cars in 2019 are expected to slightly exceed the prior-year figures in markets in Central and Eastern Europe. The volume of demand in the markets for passenger cars and light commercial vehicles (up to 6.35 tonnes) in North America is likely to be slightly lower than in
the prior year. We expect new registrations in the South American markets for passenger cars and light commercial vehicles to grow moderately overall compared with the previous year. The passenger car markets in the Asia-Pacific region are expected at the prior-year level.

Trends in the markets for light commercial vehicles in the individual regions will be mixed again in 2019; on the whole, we anticipate a slight dip in demand.

In the markets for mid-sized and heavy trucks that are relevant for the Volkswagen Group and in the relevant markets for buses, new registrations in 2019 are expected to slightly exceed the prior-year level.

We believe that automotive financial services will continue to be very important for vehicle sales worldwide in 2019.

The Volkswagen Group is well prepared overall for the future challenges pertaining to the automobility business and the mixed developments in regional vehicle markets. Our brand diversity, our presence in all major world markets, our broad, selectively expanded product range and pioneering technologies and services put us in a good competitive position worldwide. As part of the transformation of our core business, we are positioning our Group brands with a stronger focus on their individual characteristics and optimizing the vehicle and drive portfolio. The focus hereby is primarily on our vehicle fleet’s carbon footprint and on the most attractive and fastest-growing market segments. In addition, we are working to make even more focused use of the advantages of our multibrand group by continuously developing new technologies and our toolkits. Our goal is to offer all customers mobility and innovations suited to their needs and thus ensuring long-term success. We will unveil additional SUV models, integrate digitalization into our products even more systematically and provide important stimuli for the future with e-mobility offerings.

We expect that deliveries to customers of the Volkswagen Group in 2019 will slightly exceed the prior-year figure amid continuously challenging market conditions.

Challenges will arise particularly from the economic situation, the increasing intensity of competition, exchange rate volatility and more stringent WLTP (Worldwide Harmonized Light-Duty Vehicles Test Procedure) requirements.

We expect the sales revenues of the Volkswagen Group and its Passenger Cars and Commercial Vehicles business areas to grow by as much as 5% year-on-year. In terms of the operating profit for the Group and the Passenger Cars Business Area, we forecast an operating return on sales in the range of 6.5–7.5% in 2019. For the Commercial Vehicles Business Area, we anticipate an operating return on sales of between 6.0% and 7.0%. In the Power Engineering Business Area, we expect a loss around the previous year’s level amid a slight rise in sales revenue. For the Financial Services Division, we are forecasting a moderate increase in sales revenues and an operating profit at the prior-year level.

In the Automotive Division, the R&D ratio and the ratio of capex to sales revenue will probably fluctuate in the range of 6.5–7.0% in 2019. Cash outflows resulting from the diesel issue will negatively impact the cash flow again in 2019, but will probably be significantly lower than in the reporting period. Consequently, we anticipate a positive net cash flow for 2019 that will be up significantly on the prior-year figure. Net liquidity in the Automotive Division is likely to be considerably lower, primarily due to a negative one-off effect arising from the change brought by IFRS 16, which will not affect cash outflows. We expect a slight increase in return on investment (ROI) compared with the previous year. Our unchanged stated goal is to continue our solid liquidity policy.

The commitment and considerable technical expertise of our staff are key prerequisites to successfully shaping the transformation into the world’s leading provider of sustainable mobility. With our future program, TOGETHER – Strategy 2025, we are attaching even greater importance to our responsibility in relation to the environment, safety and society. We are also aiming for operational excellence in all business processes and intensifying our focus on profitable growth.
Report on Risks and Opportunities

Promptly identifying the risks and opportunities arising from our operating activities and taking a forward-looking approach to managing them is crucial to our Company’s long-term success. A comprehensive risk management and internal control system help the Volkswagen Group deal with risks in a responsible manner.

In this section, we first explain the objective and structure of the Volkswagen Group’s risk management system (RMS) and internal control system (ICS) and describe these systems with regard to the financial reporting process. We then outline the main risks and opportunities arising in our business activities.

OBJECTIVE OF THE RISK MANAGEMENT SYSTEM AND INTERNAL CONTROL SYSTEM AT VOLKSWAGEN

Only by promptly identifying, accurately assessing and effectively and efficiently managing the risks and opportunities arising from our business activities can we ensure the Volkswagen Group’s sustainable success. The aim of the RMS/ICS is to identify potential risks at an early stage so that suitable countermeasures can be taken to avert the threat of loss to the Company, and any risks that might jeopardize its continued existence can be ruled out.

Assessing the probability and extent of future events and developments is, by its nature, subject to uncertainty. We are therefore aware that even the best RMS cannot foresee all potential risks and even the best ICS can never completely prevent irregular acts.

STRUCTURE OF THE RISK MANAGEMENT SYSTEM AND INTERNAL CONTROL SYSTEM AT VOLKSWAGEN

The organizational design of the Volkswagen Group’s RMS/ICS is based on the internationally recognized COSO framework for enterprise risk management (COSO: Committee of Sponsoring Organizations of the Treadway Commission). Structuring the RMS/ICS in accordance with the COSO framework for enterprise risk management ensures that potential risk areas are covered in full. Uniform Group principles are used as the basis for managing risks in a standardized manner. Opportunities are not recorded.

Another key element of the RMS/ICS at Volkswagen is the three lines of defense model, a basic element required, among other bodies, by the European Confederation of Institutes of Internal Auditing (ECIIA). In line with this model the Volkswagen Group’s RMS/ICS has three lines of defense that are designed to protect the Company from significant risks occurring.

First line of defense: operational risk management

The primary line of defense comprises the operational risk management and internal control systems at the individual Group companies and business units. The RMS/ICS is an
integral part of the Volkswagen Group’s structure and workflows. Events that may give rise to risk are identified and assessed locally in the divisions and at the investees. Countermeasures are introduced immediately, their effects assessed, and the information incorporated into the planning in a timely manner. The results of the operational risk management process are incorporated into budget planning and financial control on an ongoing basis. The targets agreed in the budget planning rounds are continually reviewed in revolving planning updates.

At the same time, the results of risk mitigation measures that have already been taken are incorporated into the monthly forecasts on further business development in a timely manner. This means that the Board of Management also has access to an overall picture of the current risk situation via the documented reporting channels during the year.

The minimum requirements for the operational risk management and internal control system are set out for the entire Group in uniform guidelines. These also include a process for the timely reporting of material risks.

Operational risk management also includes compliance with the Golden Rules in the areas of control unit software development, emission classification and escalation management. These rules are the minimum requirements in the organization, processes and tools & systems categories. We continued to reinforce the internal control system in the area of product compliance in 2018.

Second line of defense: identifying and reporting systemic and current risks using Group-wide processes

In addition to the ongoing operational risk management, the Group Risk Management department each year sends standardized surveys on the risk situation and the effectiveness of the RMS/ICS to the significant Group companies and units worldwide (regular Governance, Risk & Compliance (GRC) process). The feedback is used to update the overall picture of the potential risk situation and assess the effectiveness of the system.

Each systemic risk reported is assessed using the expected likelihood of occurrence and various risk criteria (financial and nonfinancial). In addition, the measures taken to manage and control risk are documented at management level. This means that risks are assessed in the context of any risk management measures initiated, i.e. in a net analysis. In addition to strategic, operational and reporting risks, risks arising from potential compliance violations are also integrated into this process. Moreover, the effectiveness of key risk management and control measures is tested and any weaknesses identified in the process are reported and rectified.

All Group companies and units selected from among the entities in the consolidated Group on the basis of materiality and risk criteria were subject to the regular GRC process in fiscal year 2018.

In addition to the ad hoc and annual risk assessment, the Board of Management also receives quarterly risk reports. Similar to the annual standard GRC process, the assessment takes risk-minimizing control measures into account (net assessment). All Group brands are included in this process along with Porsche Holding Salzburg, Volkswagen Financial Services AG and Volkswagen Bank GmbH.

Information on relevant systemic and current risks is regularly reported to the Group Board of Management and the Audit Committee of the Supervisory Board of Volkswagen AG.

In addition, the Company set up the Group Board of Management Committee for Risk Management in 2017. This met quarterly in the reporting year. The committee has the following tasks, among others:
- to further increase transparency in relation to significant risks to the Group and their management,
- to explain specific issues where these constitute a significant risk to the Group,
- to make recommendations on the further development of the RMS/ICS,
- to support the open approach to dealing with risks and promote an open risk culture.

The Scania brand was incorporated into the standard GRC process in 2018. The brand has already been included in quarterly risk reporting since 2016.
Third line of defense: checks by Group Internal Audit

Group Internal Audit helps the Board of Management to monitor the various divisions and corporate units within the Group. It regularly checks the risk early warning system and the structure and implementation of the RMS/ICS and the compliance management system (CMS) as part of its independent audit procedures.

RISK EARLY WARNING SYSTEM IN LINE WITH THE KONTRAG

The Company’s risk situation is ascertained, assessed and documented in accordance with the requirements of the Gesetz zur Kontrolle und Transparenz im Unternehmensbereich (KonTraG – German Act on Control and Transparency in Business). The requirements for a risk early warning system are met by means of the RMS/ICS elements described above (first and second lines of defense). Independently of this, the external auditors check both the processes and procedures implemented in this respect and the adequacy of the documentation on an annual basis. The plausibility and adequacy of the risk reports are examined on a random basis in detailed interviews with the divisions and companies concerned that also involve the external auditors. The latter assessed our risk early warning system based on this volume of data and ascertained that the risks identified were presented and communicated accurately. The risk early warning system meets the requirements of the KonTraG.

In addition, scheduled examinations as part of the audit of the annual financial statements are conducted at companies in the Financial Services Division. As a credit institution, Volkswagen Bank GmbH, including its subsidiaries, is subject to supervision by the European Central Bank, while Volkswagen Leasing GmbH as a financial services institution and Volkswagen Versicherung AG as an insurance company are subject to supervision by the relevant division of the Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin – the German Federal Financial Supervisory Authority). As part of the scheduled supervisory process and unscheduled audits, the competent supervisory authority assesses whether the requirements, strategies, processes and mechanisms ensure solid risk management and solid risk cover. Furthermore, the Prüfungsverband deutscher Banken (Auditing Association of German Banks) audits Volkswagen Bank GmbH from time to time.

Volkswagen Financial Services AG, which is responsible for the leasing, insurance, services and mobility business and the lending business outside Europe, operates a risk early warning and management system. This system ensures that the locally applicable regulatory requirements are adhered to and at the same time enables appropriate and effective risk management at Group level. Important components of it are regularly reviewed as part of the audit of the annual financial statements.

Monitoring the effectiveness of the risk management system and the internal control system

To ensure the effectiveness of the RMS/ICS, we regularly optimize it as part of our continuous monitoring and improvement processes. In the process, we give equal consideration to both internal and external requirements. On a case-by-case basis, external experts assist in the continuous enhancement of our RMS/ICS. The results culminate in both regular and event-driven reporting to the Board of Management and Supervisory Board of Volkswagen AG.

THE RISK MANAGEMENT AND INTEGRATED INTERNAL CONTROL SYSTEM IN THE CONTEXT OF THE FINANCIAL REPORTING PROCESS

The accounting-related part of the RMS/ICS that is relevant for the financial statements of Volkswagen AG and the Volkswagen Group as well as its subsidiaries comprises measures intended to ensure that the information required for the preparation of the financial statements of Volkswagen AG, the consolidated financial statements and the combined management report of the Volkswagen Group and Volkswagen AG is complete, accurate and transmitted in a timely manner. These measures are designed to minimize the risk of material misstatement in the accounts and in the external reporting.

Main features of the risk management and integrated internal control system relevant for the financial reporting process

The Volkswagen Group’s accounting is essentially organized along decentralized lines. For the most part, accounting duties are performed by the consolidated companies themselves or entrusted to the Group’s shared service centers. In principle, the audited financial statements of Volkswagen AG and its subsidiaries prepared in accordance with IFRSs and the Volkswagen IFRS accounting manual are transmitted to the Group in encrypted form. A standard market product is used for encryption.

The Volkswagen IFRS Accounting Manual, which has been prepared using external expert opinions in certain cases, ensures the application and assessment of uniform accounting policies based on the requirements applicable to the parent. In particular, it includes more detailed guidance on the application of legal requirements and industry-specific issues. Components of the reporting packages required to be prepared by the Group companies are also set out in detail there and requirements established for the presentation and settlement of intragroup transactions and the balance reconciliation process that builds on this.

Control activities at Group level include analyzing and, if necessary, adjusting the data reported in the financial statements presented by the subsidiaries, taking into account...
the reports submitted by the auditors and the outcome of the meetings on the financial statements with representatives of the individual companies. These discussions address both the reasonableness of the single-entity financial statements and specific significant issues at the subsidiaries. Alongside reasonableness reviews, other control mechanisms applied during the preparation of the single-entity and consolidated financial statements of Volkswagen AG include the clear delineation of areas of responsibility and the application of the dual control principle.

The combined management report of the Volkswagen Group and Volkswagen AG is prepared – in accordance with the applicable requirements and regulations – centrally but with the involvement of and in consultation with the Group units and companies.

In addition, the accounting-related internal control system is independently reviewed by Group Internal Audit in Germany and abroad.

**Integrated consolidation and planning system**

The Volkswagen consolidation and corporate management system (VoKUs) enables the Volkswagen Group to consolidate and analyze both Financial Reporting’s backward-looking data and Controlling’s budget data. VoKUs offers centralized master data management, uniform reporting, an authorization concept and maximum flexibility with regard to changes to the legal environment, providing a future-proof technical platform that benefits Group Financial Reporting and Group Controlling in equal measure. To verify data consistency, VoKUs has a multi-level validation system that primarily checks content plausibility between the balance sheet, the income statement and the notes.

**RISKS AND OPPORTUNITIES**

In this section, we outline the significant risks and opportunities that arise in the course of our business activities. We have grouped them into categories. Unless explicitly mentioned, there were no material changes to the specific risks and opportunities compared with the previous year. The increasing number of partnerships generates both opportunities as well as risks.

The diesel issue gives rise to its own risks for the Volkswagen Group and also has an impact on existing risks. These are described under the respective risk category.

We use competitive and environmental analyses and market studies to identify not only risks but also opportunities with a positive impact on the design of our products, the efficiency with which they are produced, their success in the market and our cost structure. Where they can be assessed, risks and opportunities that we expect to occur are already reflected in our medium-term planning and our forecast. The following therefore reports on internal and external developments as risks and opportunities that may result in a negative or positive deviation from our forecast.

**Risks from the diesel issue**

The Volkswagen Group has recognized provisions arising from the diesel issue, in particular for the service measures, recalls and customer-related measures as well as for legal risks.

Further significant financial liabilities may emerge due to existing estimation risks particularly from legal risks, such as criminal, administrative and civil proceedings, technical solutions, lower market prices, repurchase obligations, customer-related measures and possible official or statutory requirements for diesel vehicles.

Demand may decrease – possibly exacerbated by a loss of reputation or insufficient communication. Other potential consequences include lower margins in the new and used car businesses and a temporary increase in funds tied up in working capital.

The funding needed to cover the risks may lead to assets having to be sold due to the situation and equivalent proceeds for them not being achieved as a result.

As a result of the diesel issue, the ability to use refinancing instruments may possibly be restricted or precluded for the Volkswagen Group. A downgrade of the Company’s rating could adversely affect the terms associated with the Volkswagen Group’s borrowings.

We are cooperating with all the responsible authorities to clarify these matters completely and transparently.

Additional information about the litigation can be found on pages 94 and 177 to 183 of this annual report.

**Macroeconomic risks and opportunities**

We believe that risks to continued global economic growth arise primarily from turbulence in the financial markets, increasingly protectionist tendencies and structural deficits, which pose a threat to the performance of individual advanced economies and emerging markets. The worldwide transition from an expansionary monetary policy to a more restrictive one also presents risks for the macroeconomic environment. Persistently high private- and public-sector debt in many places is clouding the outlook for growth and
may likewise cause markets to respond negatively. Declines in growth in key countries and regions often have an immediate impact on the state of the global economy and therefore pose a central risk. In particular, the Volkswagen Group would be adversely affected by a disorderly Brexit and by other trade policy measures such as tariffs.

The economic development of some emerging economies is being hampered primarily by dependence on energy and commodity prices and capital inflows, but also by socio-political tensions. Corruption, inadequate government structures and a lack of legal certainty also pose risks.

Geopolitical tensions and conflicts are a further major risk factor to the performance of individual economies and regions. As the global economy becomes increasingly interconnected, it is also vulnerable to local developments. Any escalation of the conflicts in Eastern Europe, the Middle East, or Africa, for example, could cause upheaval on the global energy and commodity markets and exacerbate migration trends. An aggravation of the situation in East Asia could put further strain on the global economy. The same applies to violent conflicts, terrorist activities and the spread of infectious diseases, which may prompt unexpected, short-term responses from the markets.

On the whole, we do not anticipate a global recession next year. Due to the risk factors mentioned, however, a decline in global economic growth or a period of below-average growth rates is possible.

The macroeconomic environment may also give rise to opportunities for the Volkswagen Group if actual developments differ in a positive way from expected developments.

**Sector-specific risks and market opportunities/potential**

Western Europe and China are our main sales markets. A drop in demand in these regions due to the economic climate would have a particularly strong negative impact on the Company’s earnings. We counter this risk with a clear, customer-oriented and innovative product and pricing policy.

Outside Western Europe and China, delivery volumes are spread widely across the key regions: Central and Eastern Europe, North America and South America. In addition, we either already have a strong presence in numerous existing and developing markets or are working systematically towards this goal. Particularly in smaller markets with growth potential, we are increasing our presence with the help of strategic partnerships and are catering to requirements there.

Price pressure in established automotive markets as a result of high market saturation is a particular challenge for the Volkswagen Group as a supplier of volume and premium models. Competitive pressures are likely to remain high in the future. Individual manufacturers may respond by offering incentives in order to meet their sales targets, putting the entire sector under additional pressure.

The growth markets of Central and Eastern Europe, South America and Asia are particularly important to the Volkswagen Group. These markets harbor considerable potential; however, the underlying conditions in some countries in these regions make it difficult to increase unit sales figures there. Some have high customs barriers or minimum local content requirements for production, for example. At the same time, wherever the economic and regulatory situation permits, there are opportunities above and beyond current projections. These arise from faster growth in the emerging markets where vehicle densities are currently still low.

In Europe, there is a risk that further municipalities and cities will impose a driving ban on diesel vehicles in order to comply with emission limits. In China, restrictions on vehicle registrations could enter into force in further metropolitan areas in the future. Furthermore, China will impose a so-called “new energy vehicle quota” from 2019 onwards, which means that battery-electric vehicles, plug-in hybrids and fuel cell vehicles will have to account for a certain proportion of a manufacturer’s new passenger car fleet. To ensure compliance with emissions standards, we continuously tailor our range of vehicle models and engines to the conditions in the relevant markets. These requirements may lead to higher costs and consequently to price increases and declines in volumes.

The demand that built up in individual established markets in times of crisis could bring a more marked recovery in these markets if the economic environment eases more quickly than expected.

Economic performance varied in individual regions in fiscal year 2018. The resulting challenges for our trading and sales companies, such as efficient inventory management and a profitable dealer network, are considerable and are being met by appropriate measures on their part. However, financing business activities through bank loans remains difficult. Our financial services companies offer dealers financing on attractive terms with the aim of strengthening their business models and reducing operational risk. We have installed a comprehensive liquidity risk management system so that we can promptly counteract any liquidity bottlenecks at the dealers’ end that could hinder smooth business operations.

We continue to approve loans for vehicle finance on the basis of the same cautious principles applied in the past,
taking into account the regulatory requirements of section 25a(1) of the Kreditwesengesetz (KWG – German Banking Act).

Volkswagen may be exposed to increased competition in aftermarket markets for two reasons in particular: firstly, because of the provisions of the block exemption regulations, which have resulted in after-sales services since June 2010, and, secondly, because of the amendments included in EU Regulation 566/2011 as of June 8, 2011 regarding access by independent market participants to technical information. In Germany, legislation is currently being prepared to restrict or abolish design protection for repair parts through the introduction of a repair clause. In addition, the European Commission is evaluating the market with regard to existing design protection. A possible restriction or abolition of design protection for visible replacement parts could adversely affect the Volkswagen Group’s genuine parts business.

The automotive industry faces a process of transformation with far-reaching changes. Electric drives, connected vehicles and autonomous driving are associated with both opportunities and risks for our sales. In particular, more rapidly evolving customer requirements, swift implementation of legislative initiatives and the market entry of new competitors from outside the industry will require changed business models.

Furthermore, we cannot entirely rule out the possibility of freight deliveries worldwide being shifted from trucks to other means of transport, and of demand for the Group’s commercial vehicles falling as a result.

Below, we outline the greatest growth and market potential for the Volkswagen Group.

**China**

In China, the largest market in the Asia-Pacific region, there was a slight year-on-year decline in the passenger car market in the reporting year. Though demand for vehicles will rise in the coming years due to the need for individual mobility, the trade conflict with the USA means that this will be at a slower pace than in the past. Demand will also shift from the large coastal cities to the interior of the country. In order to leverage the considerable opportunities offered by the Chinese market – also with regard to e-mobility – and to defend our strong market position in China over the long term, we are continuously expanding our product range to include models that have been specially developed for this market. We are further extending our production capacity in this growing market through additional production facilities.

**India**

The political and economic situation in India further stabilized in 2018. The vehicle markets continued their growth path. We expect this trend to continue. Against this backdrop, the Group is currently consolidating its activities, as India remains an important strategic future market for the Group.

**USA**

The volume of the US vehicle market in 2018 was in line with the previous year. For 2019, the market volume is expected to be slightly down on the reporting period. In the USA, Volkswagen Group of America is systematically pursuing our strategy of becoming a full-fledged volume supplier. The expansion of local production capacity – also including a production facility for electric vehicles in the future – will allow the Group to better serve the market in the North America region. We are also pressing forward with additional products tailored specifically to the US market.

**Brazil**

The economic environment eased somewhat in the reporting year, while Brazil’s political path is uncertain after the presidential elections. The volume of demand in the vehicle market recovered markedly compared with the weak prior year. We anticipate a continued upturn in demand in 2019. The growing number of automobile manufacturers with local production has resulted in a sharp increase in price pressure and competition. The Brazilian market plays a key role for the Volkswagen Group. To strengthen our competitive position here, we offer vehicles that have been specially developed for this market and are locally produced, such as the Gol and the Virtus.

**Russia**

Russia has the potential to grow into one of the largest automotive markets in the world. The volume of the Russian vehicle market in 2018 was up markedly on the previous year and we are forecasting that the passenger car market will slightly exceed the reporting year in 2019. However, the heavy reliance on oil and gas income, rising taxes, currency volatility resulting at present in high vehicle prices, the political crisis and the related sanctions imposed by the EU and the USA continue to impact the development of demand negatively. The market remains strategically important to the Volkswagen Group, which is why we are working intensively there.

**The Middle East**

Political and economic uncertainty is weighing on the region’s main sales markets, particularly Turkey. Increased
tariffs along with the dramatic depreciation of the Turkish lira, which is accompanied by very high inflation and rising interest rates, are weakening demand in the country. Despite the instability, however, the Middle East region offers long-term growth potential. We are leveraging the potential for growth with a range of vehicles that has been specifically tailored to this market, but do not have our own production facilities.

Power Engineering

The underlying trends in the global economy, such as sustained growth and a greater international division of labor, are set to continue, despite increased geopolitical and macroeconomic risks compared with the previous year. This also applies to the resulting transport routes and volumes and to the demand for touristic offers such as cruises. Growing global energy needs call for innovation in industry and a growing willingness on the part of governments to invest in relation to global climate policy.

We are working systematically to leverage market opportunities across the world, for example by positioning ourselves as a solution provider for reduced-carbon drive systems and energy generation technologies as well as for storage technologies. Moreover, significant potential can be leveraged in the medium term by enhancing our after-sales business through the introduction of new products and the expansion of our service network. Going forward, stricter requirements with respect to reliability, the availability of the plants that are already in operation, the increase in environmental compatibility and efficient operation, together with the large number of engines and plants, will provide the basis for growth.

As part of the capital goods industry, the Power Engineering business is affected by fluctuations in the investment climate. Even minor changes in growth rates or growth forecasts, resulting from geopolitical uncertainties or volatile commodities and foreign exchange markets, for example, can lead to significant changes in demand or the cancellation of already existing orders. The measures we use to counter the considerable economic risks include flexible production concepts and cost flexibility by means of temporary employment, working time accounts and short-time work, and – if necessary – structural adjustments.

Research and development risk

The automotive industry is undergoing a radical transformation process. Multinational corporations like Volkswagen are facing major challenges in the areas of customer/market, technological advances and legislation. Key aspects are the implementation of increasingly stringent emission and consumption regulations, taking new test procedures and test cycles (e.g. WLTP) into account, as well as compliance with approval processes (homologation), which are becoming increasingly more complex and time-consuming and may vary by country. On a national and international level there are numerous legal requirements regarding the use, handling and storage of substances and mixtures (including restrictions concerning chemicals, heavy metals, biocides, persistent organic pollutants), which apply to both the manufacturing of automobiles and the automobile itself.

The economic success and competitiveness of the Volkswagen Group depend on how successful we are in promptly tailoring our portfolio of products and services to the changing conditions. Due to the intensity of the competition and the speed of technological development, identifying relevant trends at an early stage and reacting accordingly is crucial.

Among other things, we therefore conduct trend analyses and customer surveys and examine the relevance of the results for our customers. We counter the risk that it may not be possible to develop modules, vehicles or services within the specified timeframe, to the required quality standards, or in line with cost specifications by continuously and systematically monitoring the progress of all projects. To avoid patent infringements, we intensively analyze third-party industrial property rights, increasingly in relation to communication technologies. We regularly compare the results of all the analyses with the respective project’s targets; in the event of variances, we introduce appropriate countermeasures in good time. Our end-to-end project organization ensures that specific requirements are incorporated into the development process as early as possible and that their implementation is planned in good time.

Risks and opportunities from the modular toolkit strategy

We are continuously expanding our modular toolkits, focusing on future customer requirements, legal requirements and infrastructural requirements.

The Modular Transverse Toolkit (MQB) has created an extremely flexible vehicle architecture that permits dimensions determined by the concept – such as the wheelbase, track width, wheel size and seat position – to be harmonized throughout the Group and utilized flexibly. Other dimensions, for example the distance between the pedals and the middle of the front wheels, are always the same, ensuring a uniform system in the front of the car. Based on the synergy effects thereby achieved, we are able to cut both development costs and the necessary one-time expenses and manufacturing times. The toolkits also allow us to produce different models from different brands in various quantities, using the same system in a single plant. This means that our
capacities can be used with greater flexibility throughout the entire Group, enabling us to achieve efficiency gains.

We are currently transferring this principle of standardization with maximum flexibility to the Modular Electric Drive Toolkit (MEB), a concept developed for all-electric drives. The synergy effects and efficiency gains achieved from the modular toolkit strategy will give us the opportunity to bring e-mobility into mass production manufacturing worldwide from 2020 with the introduction of the first MEB-based vehicle.

Higher volumes will, however, increase the risk that quality problems will affect an increasing number of vehicles.

Opportunities and risks from partnerships
As part of our future program TOGETHER – Strategy 2025, we are stepping up our efforts to forge collaborations, both for the transformation of our core business and for the establishment of the new mobility solutions business. By entering into partnerships at a local level, we aim to identify regional customer needs more precisely, establish competitive cost structures and develop and offer market-driven products. Going forward, we will concentrate to a greater extent than previously on partnerships, acquisitions and venture capital investments. This will enable us to generate maximum value for the Group and its brands and to expand our expertise, particularly in new areas of business.

Volkswagen owns a large number of patents and other industrial property rights and copyrights. Partnerships can lead to patent and licensing infringements and thus to the unauthorized disclosure of company-specific expertise. Volkswagen monitors the sales markets and also protects its expertise with legal action.

Procurement risks and opportunities
Current trends in the automotive industry such as e-mobility and automated driving are resulting in an increased need for financing among suppliers. The Volkswagen Group’s procurement risk management system assesses suppliers before they are commissioned to perform projects. Among other things, the procurement function considers the risk of insufficient competition if it concentrates on a few financially strong suppliers when awarding contracts.

The positive economic trend in Europe, North America and China weakened over the course of the year. Moreover, shifts in demand from our customers and restrictions in the availability of model variants as a result of the WLTP test procedure posed a challenge to suppliers. These changed circumstances restricted suppliers’ financing opportunities, particularly in areas where alternative technologies are gaining importance. The procurement risk management system continuously and globally monitors the financial situation of our suppliers and takes targeted measures to avoid supply bottlenecks.

The number of crises and insolvencies among suppliers worldwide fell in 2018 in line with the global economic situation. Specialists in restructuring and supply reliability are coordinating the measures to be taken on a Group-wide basis to safeguard production in a timely and sustainable manner.

The current trends in the automotive industry will also affect the availability of special raw materials, which are principally used in electrified vehicles. The raw material and demand trend was continuously analyzed and assessed on an interdisciplinary basis over the reporting year to enable steps to be taken in a timely manner in the event of potential bottlenecks.

New bilateral and multilateral trade agreements, including those for steel, for the expected shift in the product mix from diesel to petrol engines and for short-term demand fluctuations relating to the WLTP test procedure, present challenges that must be tackled together with suppliers. As a result of the new trade agreement between the USA, Mexico and Canada, there is a risk of additional costs due to more expensive deliveries.

Quality problems may necessitate technical intervention involving a considerable financial outlay where costs cannot be passed on to the supplier or can only be passed on to a limited extent. It is not possible at present to rule out the possibility of a further increase in recalls of various models produced by different manufacturers in which certain airbags manufactured by Takata were installed. This could also affect Volkswagen Group models.

In addition to financial difficulties, supply risks may arise, for example, as a result of fires or accidents at suppliers. Supply risks are identified without delay in the procurement function through early warning systems and mitigated immediately by applying derived measures.

Additional measures were taken to safeguard supply and avert future assembly line stoppages caused by suspensions of deliveries.

Antitrust investigations into suppliers on grounds of price-fixing agreements are being monitored by Risk Management. The effects on Volkswagen are being systematically reviewed.

Production risk
Volatile developments in the global automotive markets, accidents at suppliers and disruption in the supply chain caused production volumes of individual vehicle models to fluctuate at some plants. In specific markets, we also recorded
a change in incoming orders: the number of orders for diesel vehicles fell, while orders for petrol engines rose. We address such fluctuations using tried-and-tested tools, such as flexible working time models. The design of the production network enables us to respond dynamically to varying changes in demand at the sites. “Turntable concepts” even out capacity utilization between production facilities. At multibrand sites, volatile demand can also be smoothed across brands.

Legal changes, for instance in the context of the changeover to the WLTP test procedure, may impact production. For one thing, a temporary reduction in the range causes demand to focus on the available variants. Moreover, gaps in production can occur if model variants have not been approved. These fluctuations necessitate measures to stabilize production, such as the temporary storage of vehicles until official approval.

Short-term changes in customer demand for specific equipment features in our products, and the decreasing predictability of demand, may lead to supply bottlenecks. We minimize this risk, for example, by continuously comparing our available resources against future demand scenarios. If we identify bottlenecks in the supply of materials, we can introduce countermeasures far enough in advance.

Production capacity is planned several years in advance for each vehicle project on the basis of expected sales trends. These are subject to market changes and generally entail a degree of uncertainty. If forecasts are too optimistic, there is a risk that capacity will not be fully utilized. However, forecasts that are too pessimistic pose a risk of undercapacity, as a result of which it may not be possible to meet customer demand.

The range of our models is growing, while at the same time product life cycles are becoming shorter; the number of new vehicle start-ups at our sites worldwide is therefore increasing. The processes and technical systems we use for this are complex and there is thus a risk that vehicle deliveries may be delayed. We address this risk by drawing on experience of past start-ups and identifying weaknesses at an early stage so as to ensure that production volumes and quality standards are met during our new vehicle start-ups throughout the Group.

In order to prevent downtime, lost output, rejects and reworking in general, we use the TPM (Total Productive Maintenance) method at our production facilities. TPM is a continuous process, that involves the entire workforce. Round-the-clock maintenance of the technical facilities means that they are always operational and guaranteed to function reliably.

Particular events beyond our control such as natural disasters or other events such as fires, explosions or the leakage of substances hazardous to health and/or the environment, may adversely affect production to a significant extent. As a consequence, bottlenecks or even outages may occur, thus preventing the planned volume of production from being achieved. We address such risks with, among other things, fire protection measures and hazardous goods management, and, where financially viable, ensure that they are covered by insurance policies.

**Risks arising from long-term production**

In the case of large projects, risks may arise that are often only identified in the course of the project. They may result in particular from contract drafting errors, miscosting, post-contract changes in economic and technical conditions, weaknesses in project management, or poor performance by subcontractors. In particular, omissions or errors made at the start of a project are usually difficult to compensate for or correct, and often entail substantial additional expenses.

We endeavor to identify these risks at an even earlier stage and to take appropriate measures to eliminate or minimize them before they occur by constantly optimizing the project control process across all project phases and by using a lessons-learned process and regular project reviews. We can thus further reduce risk, particularly during the bidding and planning phase for large upcoming projects.

**Risks arising from changes in demand**

As a result of the diesel issue, the Volkswagen Group may experience decreases in demand, possibly exacerbated by media reports.

Consumer demand is shaped not only by real factors such as disposable income, but also by psychological factors that cannot be planned for. Unexpected buyer reluctance could stem from households’ worries about the future economic situation, for example. This is particularly the case in saturated automotive markets such as Western Europe, where demand could drop as a result of owners holding on to their vehicles for longer. We are countering the buyer reluctance with our attractive range of models and systematic customer orientation.
A combination of buyer reluctance in some markets as a result of the crisis and increases in some vehicle taxes based on CO₂ emissions – as already exist in many European countries – may shift demand towards smaller segments and engines. We counter the risk that such a shift will negatively impact the Volkswagen Group’s earnings by constantly developing new, fuel-efficient vehicles and alternative drive technologies, based on our drivetrain and fuel strategy.

Automotive markets around the world are exposed to risks from government intervention such as tax increases, which curb private consumption, or from protectionist tendencies.

Commercial vehicles are capital goods: even minor changes in growth rates or growth forecasts can significantly affect transport requirements and thus demand. The production fluctuations arising as a result require a high degree of flexibility from manufacturers. Although production volumes are significantly lower, the complexity of the trucks and buses range in fact significantly exceeds the already very high complexity of the passenger cars range. Key factors for commercial vehicle customers are total cost of ownership, vehicle reliability and the service provided. In addition, customers are increasingly interested in additional services such as freight optimization and fleet utilization, which we offer in the commercial vehicle segment through the newly established digital brand RIO, for example.

MAN Power Engineering’s two-stroke engines are produced exclusively by licensees, particularly in South Korea, China and Japan. On account of volatile demand in new ship construction, there is excess capacity in the market for marine engines, which may result in a decline in license revenues and bad debt losses. Due to changes in the competitive environment, especially in China, there is also the risk of losing market share. We address these risks by constantly monitoring the markets, working closely with all licensees and introducing new technologies.

Dependence on fleet customer business

Viewed over an extended period, the fleet customer business is generally more stable than the business with retail customers; in 2018, it continued to be characterized by increasing concentration and internationalization.

The Volkswagen Group is well positioned with its broad portfolio of products and drive systems, as well as its target-group-focused customer care. There is no concentration of default risks at individual fleet customers or markets. The high market share in Europe shows that fleet customers still have confidence in the Group.

Quality risk

Right from the product development stage, we aim to identify and rectify quality problems at the earliest possible point, so as to avoid delays to the start of production. As we are using an increasing number of modular components as part of our modular toolkit strategy, it is particularly important when malfunctions do occur to identify the cause and eliminate the malfunctions as quickly as possible. We further optimized the processes with which we can prevent these defects at our brands and improved our organizational processes during the reporting period so that we are able to counter the associated risks more effectively.

Increasing technical complexity and the use of the toolkit system in the Group mean that the need for high-grade supplier components and software of impeccable quality is rising. To ensure the continuity of production, it is also extremely important that our own plants and our suppliers deliver components on time. We ensure long-term quality and supply capability from the very start of the supply chain using a risk management system that we first tested internally and then introduced with suppliers. In this way, Group Quality Management contributes to fulfilling customer expectations and consequently to boosting our Company’s reputation, sales figures and earnings.

Assuring quality is of fundamental importance especially in the Brazilian, Russian, Indian and Chinese markets, for which we develop dedicated vehicles and where local manufacturers and suppliers have been established, particularly as it may be very difficult to predict the impact of regulations or official measures. We continuously analyze the conditions specific to each market and adapt quality requirements individually to them. We counter the local risks we identify by continuously developing measures and implementing them locally, thereby effectively preventing quality defects from arising.

Vehicle registration and operation criteria are defined and monitored by national and, in some cases, international authorities. Several countries also have special – and in some cases new – rules aimed at protecting customers in their dealings with vehicle manufacturers. With our established and revised quality assurance processes, we ensure that the Volkswagen Group brands and their products fulfill all respective applicable requirements and that local authorities receive timely notification of all issues requiring reporting. By doing so, we reduce the risk of customer complaints or other negative consequences.

Personnel risk

We counter economic risks as well as changes in the market and competitive situation with a range of instruments that
help the Volkswagen Group to remain flexible with a fluctuating order situation – whether orders decline or demand for our products increases. These include time accounts which are filled when overtime is necessary and reduced through time off in quiet periods, enabling our factories to adjust their capacity to the production volume with measures such as extra shifts, closure days and flexible shift models. The use of temporary workers also allows us to plan more flexibly. All of these measures help the Volkswagen Group to generally maintain a stable permanent workforce even when orders fluctuate.

The technical expertise and individual commitment of employees are indispensable prerequisites for the success of the Volkswagen Group. Our strategically oriented and holistic human resource development gives all employees attractive training and development opportunities, with particular emphasis being placed on strengthening professional skills in the Company’s different vocational groups. By boosting our training programs, particularly at our international locations, we are able to adequately address the challenges of technological change.

We are continuously expanding our recruitment tools. Our systematic talent relationship management, for example, enables us to make contact with talented candidates from strategically relevant target groups at an early stage and to build a long-term relationship between them and the Group. In addition to the standard dual vocational training, programs such as our StIP integrated degree and traineeship scheme ensure a pipeline of highly qualified and motivated employees. By systematically increasing our attractiveness as an employer, we gain talented people in the future-critical areas of IT, design and social media. With tools such as these, we ensure that we can cover our requirement for highly qualified new staff even amid a shortage of skilled labor.

We counter the risk that knowledge will be lost as a result of employee fluctuation and retirement with intensive, department-specific training. We have also established a base of senior experts in the Group. With this instrument, we use the valuable knowledge of our experienced specialists who have retired from Volkswagen.

The advancing digitalization of our human resources processes entails risks arising from the processing of personal data. Volkswagen is aware of its responsibility in the processing of this data. We address these risks as part of our data protection management system by implementing a wide range of measures.

One challenge of our collaboration with the monitor lies in the tension, in some regards, between the monitor’s requests for information on the one hand and both German and international data-protection requirements on the other. This is true particularly against the backdrop of the existing scopes of assessment and interpretation regarding data-protection requirements. In the interest of precluding infringements of the law as best as possible – despite a partially unclear legal situation – Volkswagen is advised by external law firms on these issues.

IT Risks

At Volkswagen, a global company geared towards further growth, the information technology (IT) used in all divisions Group-wide is assuming an increasingly important role. IT risks exist in relation to the three protection goals of confidentiality, integrity and availability, and comprise in particular unauthorized access to, modification of and extraction of sensitive electronic corporate or customer data as well as limited systems availability as a consequence of downtime and disasters. Handling data with integrity ensures that it is correct and uncorrupted, and that systems function without error.

The high standards we set for the quality of our products also apply to the way in which we handle our customers’ and employees’ data. In particular, the digital services for our mobility services must be secured. Our guiding principles are data security, transparency and informational self-determination.

We address the risk of unauthorized access to, modification of, or extraction of corporate and customer data with the use of IT security technologies (e.g. firewall and intrusion prevention systems) and a multiple-authentication procedure. Additionally, we increase protection by restricting the allocation of access rights to systems and information and by keeping backup copies of critical data resources. Redundant IT infrastructures protect us against risks that occur in the event of a systems failure or natural or other disasters.

We used commercially available technologies to protect our IT landscape, adhering to standards applicable throughout the Company. We future-proof our IT through continual standardization and updates. Continuously increasing automation enhances process reliability and the quality of processing.

The further development and Group-wide use of IT governance processes, particularly the further standardization of the IT risk management process, also helps to identify risks at an early stage and reduce them effectively.

The focus of our IT security program is the ongoing enhancement of Group-wide security measures. This currently includes the setting up of an IT security command center. The center’s role is to detect cyber-attacks quickly,
helping us to successfully defeat them using the latest tools. Volkswagen complements these technical measures by systematically raising awareness and providing training for employees.

Environmental protection regulations

The specific emission limits for all new passenger car and light commercial vehicle fleets for brands and groups in the EU for the period up to 2019 are set out in Regulation (EC) No 443/2009 on CO₂ emissions from passenger cars and Regulation (EU) No 510/2011 on light commercial vehicles of up to 3.5 tonnes, which came into effect in April 2009 and June 2011, respectively. These regulations are important components of the European climate protection policy and therefore form the key regulatory framework for product design and marketing by all vehicle manufacturers selling in the European market.

The average CO₂ emissions of new European passenger car fleets have not been allowed to exceed 130 g CO₂/km since 2012. Compliance with this requirement was introduced in phases; since 2015 the entire fleet has to meet this limit. Regulation (EU) No 333/2014, which was adopted in 2014, states that the average emissions of European passenger car fleets may be no higher than just 95 g CO₂/km from 2021 onwards; in 2020, this emissions limit will already apply to 95% of the fleet. Up to and including 2020, European fleet legislation will be compiled with on the basis of the New European Driving Cycle (NEDC). After 2021, the NEDC target value will be changed into a WLTP target value through a process defined by lawmakers; this change is not expected to lead to additional tightening of the target value.

The EU’s CO₂ regulation for light commercial vehicles requires limits to be met from 2014 onwards, with targets being phased in over the period to 2017. Under this regulation, the average CO₂ emissions of new vehicle registrations in Europe may not exceed 175 g CO₂/km. From 2020 onwards, the limit under Regulation (EU) No 253/2014, which was adopted in 2014, is 147 g CO₂/km.

In the fourth quarter of 2017, the European Commission published a regulatory proposal for the CO₂ regime after 2020. In December 2018, the European Council, Parliament and Commission agreed on post-2020 fleet legislation, which has yet to be conclusively published in the Official Journal of the European Union. This legislation stipulates a reduction of 15% from 2025 and 37.5% from 2030 for the European new passenger car fleets and a reduction of 15% in 2025 and 31% in 2030 for the new light commercial vehicle fleets. In each case, the starting point is the fleet value in 2021. Policy-makers are already discussing reduction targets for the transport sector for the period to 2050, such as the 60% reduction in greenhouse gas emissions compared to 1990 levels cited in the EU White Paper on transport published in March 2011. These long-term targets can only be achieved through a high proportion of electric vehicles.

At the same time, regulations governing fleet fuel consumption are also being developed or introduced outside the EU28, for example in Brazil, Canada, China, India, Japan, Mexico, Saudi Arabia, South Korea, Switzerland, Taiwan and the USA. Brazil has introduced a fleet efficiency target as part of a voluntary program for granting a tax advantage. To receive a 30% tax advantage, vehicle manufacturers must, among other things, achieve a specified fleet efficiency. The fuel consumption regulations in China, which set an average fleet target of 6.9 liters/100 km for the period 2012–2015, were continued into the period 2016–2020 with a target of 5.0 liters/100 km. Preparations for legislation up to 2025 have begun. In addition to this legislation on fleet consumption, China will impose a so-called “new energy vehicle quota” in the future. This means that from 2019 onwards, battery-electric vehicles, plug-in hybrids and fuel cell vehicles will have to account for a certain proportion of a manufacturer’s new passenger car fleet. Due to the extension of greenhouse gas legislation in the USA (the law was signed in 2012), uniform fuel consumption and greenhouse gas standards will continue to apply in all federal states in the period from 2017 to 2025.

The increased regulation of fleet-based CO₂ emissions and fuel consumption makes it necessary to use the latest mobility technologies in all key markets worldwide. At the same time, electrified and also purely electric drives will become increasingly common. The Volkswagen Group closely coordinates technology and product planning with its brands so as to avoid breaches of fleet fuel consumption limits, since these would entail severe financial penalties. Volkswagen continues to regard diesel technology as an important element in the fulfillment of CO₂ emissions targets.

EU legislation allows excess emissions and emission shortfalls to be offset between vehicle models within a fleet of new vehicles. Furthermore, the EU permits some flexibility in fulfilling the emissions targets, for example:

- Emission pools may be formed,
- Relief opportunities may be provided for additional innovative technologies contained in the vehicle that apply outside the test cycle (eco-innovations),
- Special rules are in place for small-series producers and niche manufacturers,
- Particularly efficient vehicles qualify for super-credits. Whether the Group meets its fleet targets depends crucially on its technological and financial capabilities, which are reflected in, among other things, our drivetrain and fuel strategy.

In the EU, a new, more time-consuming test procedure – the Worldwide Harmonized Light-Duty Vehicles Test Procedure (WLTP), – for determining pollutant and CO₂ emissions as well as fuel consumption in passenger cars and light commercial vehicles has applied to new vehicle types since September 2017 and to all new vehicles since September 2018. Other challenges arise in connection with stricter
processes and requirements regarding WLTP, such as from test criteria and from homologation (achievement of approval).

The Real Driving Emissions (RDE) regulation for passenger cars and light commercial vehicles is also one of the main European regulations. New, uniform limits for nitrogen oxide and particulate emissions in real road traffic have applied to new vehicle types across the EU since September 2017. This makes the RDE test procedure fundamentally different from the Euro 6 standard still in force, which stipulates that the limits on the chassis dynamometer are authoritative. The RDE regulation is intended primarily to improve air quality in urban areas and areas close to traffic. It leads to stricter requirements for exhaust gas aftertreatment in passenger cars and light commercial vehicles. There are challenges associated with stricter processes and requirements regarding RDE, such as from test criteria and from homologation (achievement of approval).

The other main EU regulations affecting the automotive industry include:

- EU Directive 2007/46/EC establishing a framework for the approval of motor vehicles,
- EU Directive 2009/33/EC on the promotion of clean and energy-efficient road transport vehicles (Green Procurement Directive),
- EU Directive 2006/40/EC relating to emissions from air-conditioning systems in motor vehicles,
- The Car Labeling Directive 1999/94/EC,
- The Fuel Quality Directive (FQD) 2009/30/EC updating the fuel quality specifications and introducing energy efficiency specifications for fuel production,
- Renewable Energy Directive (RED) (2009/28/EC) introducing sustainability criteria; the follow-up regulation (RED2) contains higher quotas for advanced biofuels,
- The revised Energy Taxation Directive 2003/96/EC updating the minimum tax rates for all energy products and power.

The implementation of the above-mentioned directives by the EU member states serves to support the CO₂ regulations in Europe. These are aimed not only at vehicle manufacturers, but also at other sectors such as the mineral oil industry. Vehicle taxes based on CO₂ emissions are having a similar steering effect; many EU member states have already incorporated CO₂ elements into their rules on vehicle taxation.

There is particular momentum in the debate on driving bans for diesel vehicles in Germany. This was triggered by the failure of some municipalities and cities to comply with the limits for nitrogen dioxide (NO₂) immissions. In many places, lawsuits have been filed and judgments issued. It is argued in this context that only driving bans for diesel vehicles can bring about the necessary short-term reduction in NO₂ immissions. The discussion may result in sales volumes of diesel vehicles to decline further and to financial liabilities arising from customer-related measures and possible official or statutory requirements.

Local driving bans are already in place in a number of countries, though these mainly affect older vehicles. Regulations in Belgium that successively bar older vehicles from larger cities are one corresponding example. With a view to the future, large urban areas such as Paris and London are discussing banning vehicles with combustion engines.

Heavy commercial vehicles first put into operation from 2014 onwards are already subject to the stricter emission requirements of the Euro 6 standard in accordance with Regulation (EU) No 582/2011. Alongside the CO₂ legislation for passenger cars and light commercial vehicles, the EU has prepared more comprehensive regulation of CO₂ emissions in heavy commercial vehicles. Simply setting an overarching limit for these vehicles – such as that in place for passenger cars and light commercial vehicles – would require an extremely complex set of rules because of the wide range of variants. For this reason, the European Commission has worked with independent scientific institutions and the European Automobile Manufacturers’ Association (ACEA) to prepare a simulation-based method called the Vehicle Energy Consumption Calculation Tool (VECTO). This can be used to determine the CO₂ emissions of heavy commercial vehicles of over 7.5 tonnes based on their typical use (short-haul, regional, distribution and long-haul trips, service on construction sites and as municipal vehicles, city buses, intercity buses and coaches). A legislative proposal for the CO₂ certification of heavy commercial vehicles and regulations on the reporting and monitoring of CO₂ figures was presented in May 2017; the legislation for the declaration of CO₂ figures for heavy commercial vehicles came into effect in January 2018. A CO₂ declaration will be compulsory for selected vehicle categories from 2019 (initially long-haul and regional distribution vehicles, later also buses and other segments), with the captured data first being used to enable the customer to compare information and for certification and monitoring purposes. Further vehicle categories are likely to be included as time progresses. As part of its strategy to decarbonize transport, the European Commission has also
Group Management Report on Risks and Opportunities

announced that it will be proposing CO₂ standards for heavy commercial vehicles in order to achieve the targets of the Paris climate agreement. During trilogue negotiations in February 2019, the European Parliament and EU member states agreed on a joint proposal regarding the CO₂ regulation for heavy trucks. Accordingly, truck manufacturers have to achieve the intermediate goal by 2025, namely a 15% reduction of CO₂ emissions for their new vehicle fleets within the EU. The goal of achieving a reduction provision of 30% shall apply by 2030. The reference year for all reduction goals is 2019. The current proposal also provides for fines if the limits are exceeded. Before these provisions can bindingly enter into force, the Council and the Parliament must approve the resolutions.

As part of its efforts to reduce the CO₂ emissions of heavy commercial vehicles, the European Commission has also amended the provisions regarding the maximum permissible dimensions and weights of trucks (Directive 1996/53/EC, the Weights and Dimensions Directive) and revised them through EU Directive 2015/719. According to these, cabs with a rounded shape and air conduction devices at the rear of the vehicle will make it possible to improve aerodynamics in future. In addition, the legislators increased the overall weight permitted for vehicles with alternative drive technologies by up to one tonne. The specific technical requirements for the development of aerodynamic cabs are currently being examined.

The European commercial vehicles industry supports the goals of reducing CO₂ emissions and improving transport safety. However, it is not just the vehicles themselves that affect future CO₂ emissions; individual components also play an important role, such as reduced rolling resistance tires or the aerodynamic trim of the trailer, as do driving behavior, alternative fuels including the required filling stations, transport infrastructure and transport conditions. As part of a field trial that took place up to the end of 2016, longer and heavier vehicles have been used in regular operations on German roads. Since the beginning of 2017, these, cabs with a rounded shape and air conduction devices at the rear of the vehicle will make it possible to improve aerodynamics in future. In addition, the legislators increased the overall weight permitted for vehicles with alternative drive technologies by up to one tonne. The specific technical requirements for the development of aerodynamic cabs are currently being examined.

Networking and digitalizing the transport system will also eliminate existing inefficiencies such as inadequate utilization of existing load capacities, empty trips or unnetworked route planning: vehicles that move in networked, intermodal transport systems in which flows of traffic are optimized through the use of artificial intelligence, save fuel and hence reduce CO₂ emissions. Automated driving also presents considerable potential for more sustainable organization of goods transport in road traffic, for example through platooning, in which the driver of the first truck in a convoy of networked, partially self-driving trucks specifies the direction and speed. Driving in the slipstream of other trucks on motorways allows fuel consumption to be reduced and safety to be increased. However, platooning requires changes in the legal framework and establishment of the necessary infrastructure.

In the Power Engineering segment, the International Maritime Organization (IMO) has introduced the International Convention for the Prevention of Pollution from Ships (Marine Pollution, MARPOL), with which limits on emissions from marine engines will be lowered in phases. A reduction of the sulfur content in marine fuel has been confirmed with effect from January 1, 2020. In addition, the IMO has decided on a number of emission control areas in Europe and in the USA/Canada that will be subject to special environmental regulations. Expansion to further regions such as the Mediterranean or Japan is already being planned; other regions such as the Black Sea, Alaska, Australia or South Korea are also in discussion. In addition, emission limits also apply, for example, under Regulation (EU) 2016/1628 and in accordance with the regulations of the U.S. Environmental Protection Agency (EPA). On specialist bodies and in public, we are emphatically championing a “maritime energy transition”. In a first step, we are supporting the switch to liquefied natural gas (LNG) as a fuel for maritime applications and also offer dual fuel and gas-powered engines for new and retrofitted vessels. For long-term, climate-neutral operation of seagoing vessels, we advocate power-to-X technology, in which excess sustainably generated electricity is converted into carbon-neutral gas or liquid fuel.

As regards stationary equipment, there are a number of national rules in place worldwide that limit permitted emissions. On December 18, 2008, the World Bank Group set limits for gas and diesel engines in its “Environmental, Health, and Safety Guidelines for Thermal Power Plants”, which are required to be applied if individual countries have adopted no national requirements of their own, or ones that are less strict than those of the World Bank Group. These are currently being revised. In addition, the United Nations adopted the Convention on Long-range Transboundary Air Pollution back in 1979, setting limits on total emissions as well as nitrogen oxide for the signatory states (including all EU states, other countries in Eastern Europe, the USA and Canada). Enhancements to the product portfolio in the Power Engineering segment focus on improving the efficiency of the equipment and systems.

The allocation method for emissions certificates changed fundamentally when the third emissions trading period (2013–2020) began. As a general rule, all emission allowances for power generators have been sold at auction since 2013.
For the manufacturing industry and certain power generation installations (e.g. combined heat and power installations), a portion of the certificates are allocated free of charge on the basis of benchmarks applicable throughout the EU. The portion of certificates allocated free of charge will gradually decrease as the trading period progresses: the remaining quantities required will have to be bought at auction. Furthermore, installation operators can partly fulfill their obligation to hold emission allowances using certificates from climate change projects (Joint Implementation and Clean Development Mechanism projects). In certain (sub-)sectors of industry, there is a risk that production will be transferred to countries outside Europe due to the amended provisions governing emissions trading, a phenomenon referred to as “carbon leakage”. A consistent quantity of certificates will be allocated to these sectors free of charge for the period from 2013 to 2020 on the basis of the pan-EU benchmarks. The automotive industry was included in the new carbon leakage list that came into effect in 2015. As a result, individual facilities at Volkswagen Group locations in Europe will receive additional certificates free of charge by the end of the third trading period. Already back in 2013, the European Commission decided to initially withhold a portion of the certificates to be auctioned and not to release them for auction until a later date during the third trading period (backloading). The certificates will be directed into a market stability reserve that was established in 2018. The reserve will serve to offset any imbalance between the supply of and demand for certificates in emissions trading in the fourth trading period. Furthermore, the European Commission is planning further modifications in emissions trading when the fourth trading period begins (from 2021) that may lead to a tightening of the system and thus to price increases for the certificates.

In addition to the EU member states, other countries in which the Volkswagen Group has production sites are also considering introducing an emissions trading system. In China, for example, seven corresponding pilot projects are underway, which do not affect the Volkswagen Group. The Chinese government officially implemented a national emissions trading system at the end of 2017. Initially, this will only impact the power generation sector; a gradual expansion is being planned.

Litigation

In the course of their operating activities, Volkswagen AG and the companies in which it is directly or indirectly invested are involved in a great number of legal disputes and government proceedings in Germany and abroad. Such legal disputes and other proceedings occur in relation to employees, dealers, investors, customers, or suppliers, among others, or in relation to relevant public authorities. For the companies involved, these may result in payment or other obligations. In particular, substantial compensatory or punitive damages may have to be paid and cost-intensive measures may have to be implemented. In this context, specific quantification of the objectively likely consequences is often possible only to a very limited extent, if at all.

Risks may also emerge in connection with the adherence to regulatory requirements. This particularly applies in the case of regulatory vagueness that may be interpreted differently by Volkswagen and the authorities responsible for the respective regulations. In addition, legal risks can arise from the criminal activities of individual persons, which even the best compliance management system can never completely prevent.

Where transparent and economically viable, adequate insurance coverage was taken out for these risks. For the identifiable and measurable risks, provisions considered appropriate based on existing information were recognized and information about contingent liabilities disclosed. As some risks cannot be assessed or can only be assessed to a limited extent, the possibility of loss or damage not covered by the insured amounts and provisions cannot be ruled out. This applies particularly to legal risk assessment regarding the diesel issue.

Diesel issue

In the USA Volkswagen AG and certain affiliates reached settlement agreements (including various consent decrees) with the US Department of Justice (DOJ), the US Environmental Protection Agency (EPA), the State of California, the California Air Resources Board (CARB), the California Attorney General, the US Federal Trade Commission, and private plaintiffs represented by a Plaintiffs' Steering Committee in a multi-district litigation in California. These settlement agreements resolved certain civil claims made in relation to affected diesel vehicles in the United States of America.

Volkswagen AG also entered into agreements to resolve US federal criminal liability and certain civil penalties and claims relating to the diesel issue. As part of its plea agreement, Volkswagen AG agreed to plead guilty to three felony counts under US law – including conspiracy to commit fraud, obstruction of justice and using false statements to import cars into the United States of America – and has been sentenced to three years' probation.
A description of the diesel issue can be found starting on page 92. In connection with the diesel issue, potential consequences for Volkswagen’s results of operations, financial position and net assets could emerge primarily in the following legal areas:

1. Coordination with the authorities on technical measures worldwide

In agreement with the respective responsible authorities, the Volkswagen Group is making technical measures available worldwide for virtually all diesel vehicles with type EA 189 engines.

Within its area of responsibility, the German Federal Motor Transport Authority (Kraftfahrt-Bundesamt or KBA) ascertained for all clusters (groups of vehicles) that implementation of the technical measures would not bring about any adverse changes in fuel consumption figures, CO₂ emissions, engine power, maximum torque, and noise emissions.

AUDI AG has worked intensively for many months to check all relevant diesel concepts for possible discrepancies and retrofit potentials. The measures proposed by AUDI AG have been adopted and mandated in various recall notices issued by the KBA for vehicle models with V6 and V8 TDI engines.

Currently, AUDI AG assumes that the total cost, including the amount based on recalls, of the ongoing largely software-based retrofit program that began in July 2017 will be manageable and has recognized corresponding balance-sheet risk provisions. The measures submitted by AUDI AG are being examined by the KBA and can only be made available to customers after corresponding approval by the KBA.

The Ministry of Environment in South Korea qualified certain emissions strategies in the engine control software of various diesel vehicles with V6 or V8-TDI engines meeting the Euro 6 emission standard as an unlawful defeat device and ordered a recall on April 4, 2018; the same applies to the Dynamic Shift Program (DSP) in the transmission control of a number of Audi models.

In the USA, in fiscal year 2018, the EPA and CARB issued the outstanding official approvals needed for the technical solutions for the affected vehicles with 2.0 l TDI and with V6 3.0 l TDI engines. In the case of 2.0 l Generation 2 diesel vehicles with manual transmissions, Volkswagen Group of America, Inc. elected to withdraw the approved emissions modification proposal, whereby owners were given the option of a buyback and lessees were given the option of early lease termination.

On October 31, 2018, after discussions with DOJ, EPA, and CARB, the parties agreed to modify the First and Second Partial Consent Decrees to clarify that Volkswagen may repair certain technical issues with approved emissions modifications through an “AEM Correction” (Approved Emissions Modifications).

2. Criminal and administrative proceedings worldwide (excluding the USA/Canada)

Criminal investigations, regulatory offense proceedings, and/or administrative proceedings (in Germany for example by the Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin – Federal Financial Supervisory Authority) have been opened in some countries. The public prosecutor’s offices in Braunschweig and Munich are investigating the core issues of the criminal investigations.

The Braunschweig Office of the Public Prosecutor is investigating approximately 40 (current and former) employees and a former member of the Board of Management for possible fraud, among other things. The investigations are ongoing. The defendants and Volkswagen AG were permitted to inspect the investigation files.

The regulatory offense proceeding that was opened against Volkswagen AG in this connection in April 2016 has been terminated by the administrative fine order issued against Volkswagen AG by the Braunschweig Office of the Public Prosecutor on June 13, 2018. The administrative fine order is based on a negligent breach in the Powertrain Development department of the obligation to supervise, relating to the period from mid-2007 to 2015 and a total of 10.7 million vehicles with diesel engines of types EA 189 worldwide and EA 288 (Generation 3) in the USA and Canada. The administrative order imposes a total fine of €1.0 billion, consisting of a penalty payment of €5 million and the forfeiture of economic benefits in the amount of €995 million. After thorough examination, the fine has been accepted and paid in full by Volkswagen AG, rendering the administrative fine order legally final. The administrative fine order terminates the regulatory offense proceeding against Volkswagen AG. Further sanctions against or forfeitures by Volkswagen AG and its Group companies are therefore not expected in Germany in connection with the unitary factual situation covered by the administrative order concerning diesel engines of types EA 189 worldwide and EA 288 (Generation 3) in the USA and Canada. As a result, Volkswagen expects that the conclusion of this proceeding will have a substantially positive impact on other governmental proceedings being conducted in Europe against Volkswagen AG and its Group companies.

The Braunschweig Office of the Public Prosecutor is conducting another proceeding against three (current or former) members of the Board of Management for alleged market
The regulatory offense proceeding conducted against AUDI AG by the Munich II Office of the Public Prosecutor terminates affairs.

Temporary seizure of client engagement documents and data of Day, holding that the lower court ruling affirming the proclamation with the search of the premises of the law firm Jones and Supervisory Board of Dr. Ing. h.c. F. Porsche AG are connected with the search of the premises of the law firm Jones and Supervisory Board of Dr. Ing. h.c. F. Porsche AG. The investigations are ongoing.

The Munich II Office of the Public Prosecutor is conducting investigations against 24 persons, including the former Chairman of the Board of Management of AUDI AG (who is also a former member of the Board of Management of Volkswagen AG) and another active member of the Board of Management of AUDI AG. The investigations are ongoing. AUDI AG has appointed two renowned major law firms to clarify the matters underlying the public prosecutor's accusations. The Board of Management and Supervisory Board of AUDI AG are being regularly updated on the current state of affairs.

The administrative fine order issued on October 16, 2018 by the Munich II Office of the Public Prosecutor terminates the regulatory offense proceeding conducted against AUDI AG in this connection. The administrative fine order is based on a negligent breach of the obligation to supervise occurring in the organizational unit “Emissions Service/Engine Type Approval”. The administrative order imposes a total fine of €800 million, consisting of a penalty payment of €5 million and the forfeiture of economic benefits in the amount of €795 million. After thorough examination, the fine has been accepted and paid in full by AUDI AG, rendering the administrative fine order legally final. The administrative fine order terminates the regulatory offense proceeding against AUDI AG. Further sanctions against or forfeitures by AUDI AG are therefore not to be expected in Europe in connection with the unitary factual situation underlying the administrative fine order.

The Stuttgart Office of the Public Prosecutor has commenced a criminal investigation relating to the diesel issue against one board member, one employee, and one former employee of Dr. Ing. h.c. F. Porsche AG on suspicion of fraud and illegal advertising as well as an analogous regulatory offense proceeding against Dr. Ing. h.c. F. Porsche AG under §30 OWiG. Dr. Ing. h.c. F. Porsche AG has appointed two renowned major law firms to clarify the matter underlying the public prosecutor’s accusations. The Board of Management and Supervisory Board of Dr. Ing. h.c. F. Porsche AG are being regularly updated on the current state of affairs.

On July 6, 2018, the Federal Constitutional Court rendered its decision on the constitutional complaints filed in connection with the search of the premises of the law firm Jones Day, holding that the lower court ruling affirming the provisional seizure of client engagement documents and data of Volkswagen AG did not violate constitutional law. The companies of the Volkswagen Group will continue to cooperate with the German government authorities with due regard for the ruling of the German Federal Constitutional Court.

Whether the criminal and administrative proceedings will ultimately result in fines for the Company, and if so in what amount, is currently subject to estimation risks. According to Volkswagen's estimates so far, the likelihood that a sanction will be imposed is 50% or less in the majority of these proceedings. Contingent liabilities have therefore been disclosed where the amount of such liabilities could be measured and the likelihood of a sanction being imposed was assessed at not lower than 10%. Provisions were recognized to a small extent.

3. Product-related lawsuits worldwide (excluding the USA/Canada)

In principle, it is possible that customers in the affected markets will file civil lawsuits or that importers and dealers will assert recourse claims against Volkswagen AG and other Volkswagen Group companies. Besides individual lawsuits, various forms of collective actions (i.e. assertion of individual claims by plaintiffs acting jointly or as representatives of a class) are available in various jurisdictions. Furthermore, in a number of markets it is possible for consumer and/or environmental organizations to bring suit to enforce alleged rights to injunctive relief, declaratory judgment, or damages.

Customer class action lawsuits and actions brought by consumer and/or environmental associations are pending against Volkswagen AG and other companies of the Volkswagen Group in various countries including Argentina, Austria, Australia, Belgium, Brazil, Chile, China, the Czech Republic, Germany, Israel, Italy, Mexico, the Netherlands, Poland, Portugal, Spain, South Africa, South Korea, Switzerland, Taiwan, and the United Kingdom. Alleged rights to damages and other relief are asserted in these actions. The actions pending in the aforementioned countries include in particular the following:

Various class action lawsuits with opt-out mechanism, one individual lawsuit, and two civil suits by the Australian Competition and Consumer Commission are currently pending in Australia against Volkswagen AG and other Group companies, including the Australian subsidiaries. These proceedings have been joined with each other. Given the opt-out rule, the class actions have the potential to automatically cover all vehicles with type EA 189 engines unless the right to opt out is actively exercised. In all, approximately 100 thousand vehicles in the Australian market with type EA 189 engines are affected. An initial court hearing lasting several weeks was held in March 2018 on technical questions; further issues are to be argued in September 2019.
In Belgium, the Belgian consumer organization Test Aankoop VZW has filed a class action to which an opt-out mechanism has been held to apply. The class action pertains to vehicles purchased by consumers on the Belgian market after September 1, 2014. The asserted claims are based on purported violations of unfair competition and consumer protection law as well as on alleged breach of contract. An initial hearing for oral argument has yet to take place in this matter. The court has extended the statute mandatorily mandated negotiation phase until July 8, 2019.

In Italy, two class actions are pending. One of them pertains to approximately 17 thousand vehicles. In this proceeding, a judgment, which is not yet final, has been rendered holding Volkswagen do Brasil liable in an amount of €0.3 billion plus interest. The judgment has been appealed. In the second class action alleged compensation claims are made based on purported breaches of environmental regulations.

In Germany, the Verbraucherzentrale Bundesverband e. V. (Federation of Consumer Organizations) filed an action on November 1, 2018 with the Braunschweig Higher Regional Court for model declaratory judgment against Volkswagen AG. The complaint is seeking a ruling that certain preconditions for potential consumer claims against Volkswagen AG are met; however, no specific payment obligations would result from any determinations the court may make. Individual claims then would have to be enforced afterwards in subsequent separate proceedings.

In addition, various actions have been brought against companies of the Volkswagen Group in several German Regional Courts (Landgericht) by financialright GmbH, which is asserting rights assigned to it by a total of approximately 46 thousand customers in Germany, Slovenia, and Switzerland.

In England and Wales, suits filed in court by various law firms have been joined in a single collective action (group litigation). Roughly 117 thousand claimants joined the group litigation prior to expiration of the opt-in deadline on December 19, 2018; around 40 thousand additional plaintiffs not currently covered by the group litigation could still be added. Because of the opt-in mechanism, not all vehicles with type EA 189 engines are automatically covered by the group litigation; potential claimants must instead take action in order to join. A judicial case management conference is scheduled for March 2019. No oral argument on the substantive merits of the claims has as yet taken place.

In Italy, two class action lawsuits have been filed with the Venice Regional Court by two consumer associations (Altroconsumo and Codacons) acting on behalf of Italian customers. Damage claims based on alleged breach of contract as well as claims based on purported violations of Italian consumer protection law are being asserted in these proceedings. In the Codacons proceeding, the court dismissed the class action as inadmissible on December 18, 2018. In the Altroconsumo proceeding, the deadline for the filing of claims has passed and those filed are currently being tabulated by an appointed expert.

In the Netherlands, Stichting Volkswagen Car Claim has brought an opt-in class action seeking declaratory rulings. Any individual claims would then have to be reduced to judgment afterwards in a separate proceeding.

Several lawsuits filed by the Austrian consumer protection organization (VKI – Verein für Konsumentenschutz) and by the Cobin Claims platform are pending in Austria. In these actions, damage claims assigned for collection to VKI or to the Cobin Claims platform are being asserted on behalf of roughly 10 thousand customers.

A Portuguese consumer organization has filed a class action with opt-out mechanism in Portugal. There are approximately 126 thousand affected vehicles in the Portuguese market. The complaint seeks vehicle return and alleges damages as well.

Volkswagen estimates the likelihood that the plaintiffs will prevail to be 50% or less for the majority of the customer class actions and the complaints filed by consumer and/or environmental organizations. Contingent liabilities are disclosed for these proceedings where the amount of such liabilities can be measured and the chance that the plaintiff will prevail was assessed as not implausible. Since most of these proceedings are still in an early stage, it is in many cases not yet possible to quantify the real risk exposure. Provisions were recognized to a small extent.

Furthermore, individual lawsuits and similar proceedings are pending against Volkswagen AG and other Volkswagen Group companies in various countries, most of which are seeking damages or rescission of the purchase contract. In Germany, there are around 46 thousand such individual lawsuits. A total of approximately one thousand additional individual lawsuits are pending in other countries. According to Volkswagen’s estimates, the likelihood that the plaintiffs will prevail is 50% or less in the vast majority of the individual lawsuits. Contingent liabilities are disclosed for these actions where the amount of such liabilities can be measured and the chance that the plaintiff will prevail was assessed as not implausible. In addition, provisions were recognized to the extent necessary based on the current assessment.

At this time it cannot be estimated how many customers will choose to file lawsuits in the future in addition to those already pending given the action for model declaratory judgment in Germany, among other things, and what their prospect of success will be.
4. Lawsuits filed by investors worldwide (excluding the USA/Canada)

Investors from Germany and abroad have filed claims for damages against Volkswagen AG – in some cases along with Porsche Automobil Holding SE (Porsche SE) as joint and several debtors – based on purported losses due to alleged misconduct in capital market communications in connection with the diesel issue.

The vast majority of these investor lawsuits are currently pending at the Regional Court in Braunschweig. On August 5, 2016, the Regional Court in Braunschweig ordered that common questions of law and fact relevant to the lawsuits pending at the Regional Court in Braunschweig be referred to the Higher Regional Court (Oberlandesgericht) in Braunschweig for binding declaratory rulings pursuant to the German Act on Model Case Proceedings in Disputes Regarding Capital Market Information (KapMuG – Kapitalanleger-Musterverfahrensgesetz). In this proceeding, common questions of law and fact relevant to these actions are to be adjudicated in a consolidated manner by the Higher Regional Court in Braunschweig (model case proceedings). All lawsuits at the Regional Court in Braunschweig will be stayed pending resolution of the common issues, unless the cases can be dismissed for reasons independent of the common issues that are to be adjudicated in the model case proceedings. The resolution in the model case proceedings of the common questions of law and fact will be binding for all pending cases that have been stayed in the described manner. In the model case action, hearing for oral argument before the Braunschweig Higher Regional Court began on September 10, 2018 and was continued in subsequent sessions. Tracking the objects of declaratory judgment, the Court gave indications as to its preliminary assessment. Oral argument is to continue in 2019.

At the Regional Court in Stuttgart, further investor lawsuits have been filed against Volkswagen AG, in some cases along with Porsche SE as joint and several debtor. On December 6, 2017, the Regional Court in Stuttgart issued an order for reference to the Higher Regional Court in Stuttgart in relation to procedural issues, particularly for clarification of jurisdiction. An action for model declaratory judgment concerning the diesel issue is also pending against Porsche SE before the Stuttgart Higher Regional Court; as the case currently stands, Volkswagen AG is model case defendant in this action as well.

Further investor lawsuits have been filed at various courts in Germany and the Netherlands. In Austria, the first-instance dismissal of the last investor complaint pending in connection with the diesel issue became binding in the reporting period.

Worldwide (excluding USA and Canada), investor lawsuits, judicial applications for dunning procedures and conciliation proceedings, and claims under the KapMuG are currently pending against Volkswagen AG in connection with the diesel issue, with the claims totaling roughly €9.6 billion. Volkswagen AG remains of the opinion that it duly complied with its capital market obligations. Therefore, no provisions have been recognized for these investor lawsuits. Insofar as the chance of success was estimated at not lower than 10%, contingent liabilities have been disclosed.

5. Proceedings in the USA/Canada

Following the publication of the EPA’s “Notices of Violation,” Volkswagen AG and other Volkswagen Group companies have been the subject of intense scrutiny, ongoing investigations (civil and criminal), and civil litigation. Volkswagen AG and other Volkswagen Group companies have received subpoenas and inquiries from state attorneys general and other governmental authorities.

Volkswagen AG and other Volkswagen Group companies are facing litigation in the USA/Canada on a number of different fronts relating to the matters described in the EPA’s “Notices of Violation.” In that respect, investigations by various US and Canadian regulatory and government authorities are ongoing, particularly in areas relating to securities, financing and tax. Additionally, in the USA and Canada, certain putative class actions by customers, investors, salespersons and dealers; individual customers’ lawsuits and claims by state, provincial or municipal authorities have been filed in various courts, including state and provincial courts. A large number of these putative class action lawsuits have been filed in US federal courts and consolidated for pretrial coordination purposes in the federal multidistrict litigation proceeding in the State of California.

In the USA, Volkswagen has reached separate agreements with the attorneys general of 49 states, the District of Columbia and Puerto Rico to resolve their existing or potential consumer protection and unfair trade practices claims in connection with both 2.0 l TDI and 3.0 l TDI vehicles in the USA. New Mexico still has consumer protection claims outstanding. Volkswagen has also reached separate agreements with the attorneys general of thirteen US states (California, Connecticut, Delaware, Maine, Maryland, Massachusetts, New Jersey, New York, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington) to resolve their existing or potential future claims for civil penalties and injunctive relief for alleged violations of environmental laws. The attorneys general of eight other US states (Alabama, Illinois, Montana, New Hampshire, New Mexico, Ohio, Tennessee, and Texas) and some municipalities have suits pending in state and jurisdiction.
federal courts against Volkswagen AG, Volkswagen Group of America, Inc. and certain affiliates, alleging violations of environmental laws. The environmental claims of eight states – Alabama, Illinois, Missouri, Minnesota, Ohio, Tennessee, Texas, and Wyoming – as well as Hillsborough County (Florida), Salt Lake County (Utah), and two Texas counties, have been dismissed in full or in part by trial or appellate courts as preempted by federal law. Alabama, Illinois, Ohio, Tennessee, Hillsborough County, and Salt Lake County have appealed or may still appeal the dismissal of their claims.

The U.S. Securities and Exchange Commission (the “SEC”) has requested information from Volkswagen regarding potential violations of securities laws in connection with issuances of bonds and asset-backed securities, as a result of nondisclosure of certain Volkswagen diesel vehicles’ noncompliance with US emission standards. The SEC informed Volkswagen that it had issued a formal order of investigation in January 2017; this investigation is ongoing. The SEC Staff subsequently informed Volkswagen that the SEC might bring an enforcement action against Volkswagen arising out of this investigation.

On August 28, 2018, Volkswagen AG and a putative class of purchasers of Volkswagen AG American Depositary Receipts agreed to settle the class’ claims alleging a drop in price purportedly resulting from the matters described in the EPA’s “Notices of Violation” in exchange for a cash payment of USD 48 million. The proposed settlement was granted preliminary approval by the court in November 2018.

On December 21, 2017, Volkswagen announced an agreement in principle on a proposed consumer settlement in Canada involving 3.0 l diesel vehicles that was approved by the courts in Ontario and Quebec in April 2018. Also in Canada, a criminal enforcement-related investigation related to 2.0 l and 3.0 l diesel vehicles by the federal environmental regulator is ongoing, and a quasi-criminal enforcement-related offense has been charged by the Ontario provincial environmental regulator related to 2.0 l diesel vehicles. Additionally, in Quebec, a certified environmental class action on behalf of residents is pending. This environmental class action was authorized on the sole issue of whether punitive damages could be recovered. Volkswagen is seeking leave to appeal this authorization ruling. Class action and joinder lawsuits have also been filed in Canada, including alleged consumer protection and securities claims asserting damages among other things.

To the extent a matter is not separately described above, an assessment is not yet possible at the current stage of the proceedings or has, in accordance with IAS 37.92, not been presented so as not to compromise the results of the proceedings and the interests of the Company.

6. Additional proceedings

With its ruling of November 8, 2017, the Higher Regional Court of Celle ordered, upon the request of three US funds, the appointment of a special auditor for Volkswagen AG. The special auditor is to examine whether there was a breach of duties on the part of the members of the Board of Management and Supervisory Board of Volkswagen AG in connection with the diesel issue on or after June 22, 2006 and, if so, whether this resulted in damages for Volkswagen AG. The ruling by the Higher Regional Court of Celle is formally unappealable. However, Volkswagen AG has filed a constitutional complaint with the German Federal Constitutional Court alleging infringement of its constitutionally guaranteed rights. It is currently unclear when the German Federal Constitutional Court will reach a decision on this matter.

Following the formally unappealable ruling from the Higher Regional Court of Celle, the special auditor appointed by the court indicated that he was not available to conduct the special audit on grounds of age. The US funds then applied to the Regional Court of Hanover to appoint another special auditor. Volkswagen AG is of the opinion that replacing the court-appointed special auditor in this manner is impermissible and has requested that the application for the appointment of a new special auditor be denied. A decision by the Regional Court of Hanover is expected in the course of 2019.

In addition, a second motion seeking appointment of a special auditor for Volkswagen AG to examine matters relating to the diesel issue has been filed with the Regional Court of Hanover. This proceeding has been suspended until the German Federal Constitutional Court renders its decision in the first special auditor litigation.

7. Risk assessment regarding the diesel issue

An amount of around €2.4 billion has been included in the provisions for litigation and legal risks as of December 31, 2018 to protect against the currently known legal risks related to the diesel issue based on existing information and current assessments. Insofar as these can be adequately measured at this stage, contingent liabilities relating to the diesel issue
were disclosed in the notes in an aggregate amount of €5.4 billion (previous year: €4.3 billion), whereby approximately €3.4 billion (previous year: €3.4 billion) of this amount results from lawsuits filed by investors in Germany. The provisions recognized and the contingent liabilities disclosed as well as the other latent legal risks in the context of diesel issue are in part subject to substantial estimation risks given that the fact finding efforts have not yet been concluded, the complexity of the individual relevant factors and the ongoing coordination with the authorities. Should these legal or estimation risks materialize, this could result in further considerable financial charges.

In line with IAS 37.92, no further statements have been made concerning estimates of financial impact or about uncertainty regarding the amount or maturity of provisions and contingent liabilities in relation to the diesel issue. This is so as to not compromise the results of the proceedings or the interests of the Company.

Additional important legal cases

In 2011, ARFB Anlegerschutz UG (haftungsbeschränkt) brought an action against Volkswagen AG and Porsche SE for claims for damages for allegedly violating disclosure requirements under capital market law in connection with the acquisition of ordinary shares in Volkswagen AG by Porsche SE in 2008. The damages currently being sought based on allegedly assigned rights amounted to approximately €2.26 billion plus interest. In April 2016, the Regional Court in Hanover had formulated numerous objects of declaratory judgment that the cartel senate of the Higher Regional Court in Celle will decide on in model case proceedings under the KapMuG. In the first hearing on October 12, 2017, the Court already indicated that it currently does not see claims against Volkswagen AG as justified, both for want of sufficiently specific pleadings and for reasons of law. Volkswagen AG sees the statements of the court’s senate as confirmation that the claims made against the Company have absolutely no basis.

At the time in question (2010/2011), other investors had also asserted claims – including claims against Volkswagen AG – arising out of the same circumstances in an approximate total amount of €4.6 billion and initiated conciliation proceedings. Volkswagen AG always refused to participate in these conciliation proceedings. Since then, these claims have not been pursued further.

In June 2013, the Annual General Meeting of MAN SE approved the conclusion of a control and profit and loss transfer agreement between MAN SE and TRATON SE (at that time Truck & Bus GmbH), a subsidiary of Volkswagen AG. In July 2013, an award proceeding was instituted to review the appropriateness of the cash settlement set out in the agreement in accordance with §305 of the Aktiengesetz (AktG – German Stock Corporation Act) and the cash compensation in accordance with §304 of the AktG. By ruling of June 26, 2018 (supplemented and amended by the rulings of July 30, 2018 and December 17, 2018), the Munich Higher Regional Court rendered a final decision increasing the annual compensation claim under §304 AktG to €5.47 gross per share (less any corporate income tax and any solidarity surcharge at the respective tax rate applicable to these taxes for the financial year in question). The cash settlement in the amount of €90.29 per share, increased in the first instance by the Munich I Regional Court, was affirmed. The decisions by the Munich Higher Regional Court are final and were published in the German Federal Gazette on August 6, 2018 and January 10, 2019.

In Brazil, the Brazilian tax authorities commenced tax proceedings against MAN Latin America; at issue in these proceedings are the tax consequences of the acquisition structure chosen for MAN Latin America in 2009. In December 2017, a second instance judgment that was negative for MAN Latin America was rendered in administrative court proceedings. MAN Latin America initiated proceedings against this judgment before the regular court in 2018. Due to the difference in the penalties plus interest which could potentially apply under Brazilian law, the estimated size of the risk in the event that the tax authorities are able to prevail overall with their view is laden with uncertainty. However, a positive outcome continues to be expected for MAN Latin America. Should the opposite occur, this could result in a risk of about €0.7 billion for the contested period from 2009 onwards, which has been stated within the contingent liabilities in the notes.

In 2011, the European Commission conducted searches at European truck manufacturers on suspicion of an unlawful exchange of information during the period 1997–2011 and issued a statement of objections to MAN, Scania and the other truck manufacturers concerned in November 2014. With its settlement decision in July 2016, the European Commission fined five European truck manufacturers. MAN’s fine was waived in full as the company had informed the European Commission about the irregularities as a key witness.

In September 2017, the European Commission fined Scania €0.88 billion. Scania has appealed to the European Court of Justice in Luxembourg and will use all means at its disposal to defend itself. Scania had already recognized a provision of €0.4 billion in 2016.

Furthermore, antitrust lawsuits for damages from customers were received. As is the case in any antitrust proceedings, this may result in further lawsuits for damages. Neither provisions nor contingent liabilities were stated because the early stage of proceedings makes an assessment currently impossible.
As part of the cartel investigations in the automotive industry already known to the public, the European Commission took the procedural step of initiating formal proceedings against affected undertakings on September 18, 2018. The investigations have been ongoing for some time. As the European Commission’s press statement indicates, the European Commission is now restricting the scope of the investigation to the subject of emissions. The formal initiation of proceedings is standard and is a purely procedural step in the process, which was expected by Volkswagen. The Volkswagen Group and the relevant Group brands have been cooperating fully with the European Commission and will continue to cooperate.

In addition, the Italian Competition Authority initiated proceedings to investigate potential competition law infringements (alleged exchange of competitively sensitive information) by a number of captive automotive finance companies, including Volkswagen Bank GmbH. The proceedings were later extended to the relevant parent companies, including Volkswagen AG. In October 2018, Volkswagen Bank GmbH and Volkswagen AG received a statement of objections summarizing the findings by the authority and describing the alleged infringement. Volkswagen AG and Volkswagen Bank GmbH transmitted their respective replies to the Italian Competition Authority in November 2018. In January 2019, the Italian Competition Authority imposed a fine of €163 million against Volkswagen AG and Volkswagen Bank GmbH. Provisions were recognized by Volkswagen Bank GmbH. Volkswagen AG and Volkswagen Bank GmbH intend to appeal this decision. Lawsuits seeking damages are possible in this proceeding as well.

In 2017, plaintiffs filed numerous complaints in various US jurisdictions on behalf of putative classes of purchasers of German luxury vehicles against several automobile manufacturers, including Volkswagen AG and other Group companies, that are now pending in two consolidated class actions in the multidistrict litigation in the State of California. The complaints allege that since the 1990s, defendants engaged in a conspiracy to unlawfully increase the prices of German luxury vehicles in violation of US antitrust and consumer protection law. Plaintiffs in Canada filed claims with similar allegations on behalf of putative classes of purchasers of German luxury vehicles against several automobile manufacturers, including Volkswagen Canada Inc., Audi Canada Inc., and other Group companies. Neither provisions nor contingent liabilities were stated because the early stage of proceedings makes an assessment currently impossible.

In addition, a few national and international authorities have initiated antitrust investigations. Volkswagen is cooperating closely with the responsible authorities in these investigations. An assessment of the underlying situation is not possible at this early stage.

For certain T6 models (M1 class) with Euro 6 diesel engines registered as passenger cars, the inspection regarding the conformity of the current production of new vehicles with the approved type (conformity of production) identified that certain technical data could not be fully confirmed. To ensure this conformity of production for new vehicles, Volkswagen AG developed a software measure, which was approved by the KBA at the end of February 2018 and was applied to newly produced vehicles as well as to new vehicles (approximately 30 thousand in all) that had not been delivered by then. Volkswagen AG also conducted in-use tests (tests to verify the conformity of vehicles in use to their type approval) to determine whether the roughly 200 thousand T6 used vehicles already on the market conform to the technical data. The tests carried out on the proposal of Volkswagen AG were taking place in close collaboration with the KBA, which included this process in a decision dated March 1, 2018. Following further tests in August 2018, at the proposal of Volkswagen AG and in accordance with this decision, there is also a software measure for used T6 vehicles to ensure conformity with the approved vehicle type.

Since November 2016, Volkswagen has been responding to information requests from the EPA and CARB related to automatic transmissions in certain vehicles with gasoline engines.

Additionally, putative class actions filed against Audi AG and certain affiliates have been transferred to the federal multidistrict litigation proceeding in the State of California and consolidated. The lawsuits allege that defendants concealed the existence of defeat devices in Audi brand vehicles with automatic transmissions. Other actions alleging similar claims are also pending in the Northern District of California and two provincial courts in Canada.

In the summer of 2017, plaintiffs filed a complaint, on behalf of a putative class of purchasers of Volkswagen AG’s American Depositary Receipts, against Volkswagen AG and against
three former and one current member of Volkswagen AG’s Board of Management, in the US District Court for the Eastern District of New York. On July 13, 2018, plaintiffs filed an amended complaint, which defendants moved to dismiss. Plaintiffs assert securities claims alleging that defendants made material misstatements and omissions concerning Volkswagen AG’s compliance measures, in particular those relating to competition and antitrust law as well as allegations in an antitrust litigation against Volkswagen AG in the Northern District of California. Defendants believe that the alleged claims are without merit.

Provisions were recognized by Volkswagen Bank GmbH and Volkswagen Leasing GmbH for possible claims in connection with financial services provided to consumers.

In addition, various proceedings are pending worldwide, particularly in the USA, in which customers are asserting purported claims either individually or in class actions. These claims are as a rule based on alleged vehicle defects, including defects alleged in vehicle parts supplied to the Volkswagen Group (for instance, in the Takata case).

Risks may also result from patent infringement actions, particularly in Germany and the USA. These actions seeking injunctive relief and damages pertain among other things to patents for semiconductor technology used in vehicles.

In line with IAS 37.92, no further statements have been made concerning estimates of financial impact or about uncertainty regarding the amount or maturity of provisions and contingent liabilities in relation to additional important legal cases. This is so as to not compromise the results of the proceedings or the interests of the Company.

Strategies for hedging financial risks

In the course of our business activities, financial risks may arise from changes in interest rates, exchange rates, raw material prices, or share and fund prices. Management of financial and liquidity risks is the responsibility of the central Group Treasury department, which minimizes these risks using nonderivative and derivative financial instruments. The Board of Management is informed of the current risk situation at regular intervals.

We hedge interest rate risk – where appropriate in combination with currency risk – and risks arising from fluctuations in the value of financial instruments by means of interest rate swaps, cross-currency interest rate swaps and other interest rate contracts with generally matching amounts and maturities. This also applies to financing arrangements within the Volkswagen Group.

Foreign currency risk is reduced in particular through natural hedging, i.e. by flexibly adapting our production capacity at our locations around the world, establishing new production facilities in the most important currency regions and also procuring a large percentage of components locally. We hedge the residual foreign currency risk using hedging instruments. These include currency forwards, currency options and cross-currency interest rate swaps. We use these transactions to limit the currency risk associated with forecasted cash flows from operating activities, intragroup financing and liquidity positions in currencies other than the respective functional currency, for example as a result of restrictions on capital movements. The currency forwards and currency options can have a term of up to six years. We thus hedge our principal foreign currency risks, mostly against the euro and primarily in Argentine pesos, Australian dollars, Brazilian real, British pound sterling, Canadian dollars, Chinese renminbi, Czech koruna, Hong Kong dollars, Hungarian forints, Indian rupees, Japanese yen, Mexican pesos, Norwegian kroner, Polish zloty, Russian rubles, Singapore dollars, South African rand, South Korean won, Danish kroner, Swiss francs, Taiwan dollars and US dollars.

The purchasing of raw materials entails risks relating to the availability of raw materials and price trends. We continuously analyze potential risks arising from changes in commodity and energy prices in the market so that immediate action can be taken whenever these arise. We limit these risks mainly by entering into forward transactions and swaps. We have used appropriate contracts to hedge some of our requirements for commodities such as aluminum, lead, coal, copper, nickel, platinum, palladium and rhodium over a period of up to six years. We have entered into similar transactions in order to supplement and improve allocations of CO₂ emission certificates.

Pages 289 to 310 of the notes to the consolidated financial statements explain our hedging policy, the hedging rules and the default and liquidity risks, and quantify the hedging transactions mentioned. Additionally, we disclose information on market risk within the meaning of IFRS 7.
Risks arising from financial instruments

Channeling excess liquidity into investments and entering into derivatives contracts gives rise to counterparty risk. Partial or complete failure by a counterparty to perform its obligation to pay interest and repay principal, for example, would have a negative impact on the Volkswagen Group’s earnings and liquidity. We counter this risk through our counterparty risk management, which we describe in more detail in the section entitled “Principles and Goals of Financial Management” starting on page 118. The financial instruments held for hedging purposes give rise to both counterparty risks and balance sheet risks, which we limit using hedge accounting.

By diversifying when selecting business partners, we ensure that the impact of a default is limited and the Volkswagen Group remains solvent at all times, even in the event of a default by individual counterparties.

Risks arising from trade receivables and from financial services are explained in more detail in the notes to the consolidated financial statements, starting on page 289.

Liquidity risk

We ensure that the Company remains solvent at all times by holding liquidity reserves, through confirmed credit lines and through our money market and capital market programs. We cover the capital requirements of the financial services business mainly by raising funds at matching maturities in the national and international financial markets as well as through customer deposits from the direct banking business.

Projects are financed by, among other things, loans provided by supranational or international development banks such as the European Investment Bank (EIB) and the European Bank for Reconstruction and Development (EBRD), or by national development banks such as Kreditanstalt für Wiederaufbau (KFW) and Banco Nacional de Desenvolvimento Econômico e Social (BNDES). Confirmed and unconfirmed lines of credit from banks supplement our broadly diversified refinancing structure.

As a result of the diesel issue, the ability to use refinancing instruments may possibly be restricted or precluded for the Volkswagen Group. A downgrade of the Company’s rating could adversely affect the terms associated with the Volkswagen Group’s borrowings.

Information on the ratings of Volkswagen AG, Volkswagen Financial Services AG and Volkswagen Bank GmbH can be found on page 113 of this report.

Residual value risk in the financial services business

In the financial services business, we agree to buy back selected vehicles at a residual value that is fixed at inception of the contract. Residual values are set at a realistic amount so that we are able to leverage market opportunities. We evaluate the underlying lease and financing contracts at regular intervals and recognize any necessary provisions if we identify any potential risks.

Management of the residual value risk is based on a defined feedback loop ensuring the full assessment, monitoring, management and communication of risks. This process design ensures not only professional management of residual risks but also that we systematically improve and enhance our handling of residual value risks.

As part of our risk management, we use residual value forecasts to regularly assess the appropriateness of the provisions for risks and the potential for residual value risk – also with a view to the public debate on further driving bans for diesel vehicles in major European cities. In the process, we compare the contractually agreed residual values with the fair values obtainable. These are determined utilizing data from external service providers and our own marketing data. We do not take account of the upside in residual market values when making provisions for risks.

More information on residual value risk and other risks in the financial services business can be found in the 2018 Annual Report of Volkswagen Financial Services AG and Volkswagen Bank GmbH.

Reputational risks

The reputation of the Volkswagen Group and its brands is one of the most important assets and forms the basis for long-term business success. Our policy on issues such as integrity, ethics and sustainability is in the public focus. One of the
basic principles of running our business is therefore to pay particular attention to compliance with legal requirements and ethical principles. However, we are aware that misconduct or criminal acts by individuals and the resulting reputational damage can never be fully prevented. In addition, media reactions can have a negative effect on the reputation of the Volkswagen Group and its brands. This impact could be amplified through insufficient crisis communication.

Moreover, the above-described individual risks that may arise in the course of our operating activities may turn into a threat to the Volkswagen Group’s reputation.

Other factors
Going beyond the risks already outlined, there are other factors that cannot be predicted and whose repercussions are therefore difficult to control. Should these transpire, they could have an adverse effect on the further development of the Volkswagen Group. In particular, such occurrences include natural disasters, epidemics, violent conflicts and terrorist attacks.

**OVERALL ASSESSMENT OF THE RISK AND OPPORTUNITY POSITION**

The Volkswagen Group’s overall risk and opportunity position results from the specific risks and opportunities shown above. We have put in place a comprehensive risk management system to ensure that these risks are controlled. The most significant risks to the Group may result from a negative trend in unit sales of, and markets for, vehicles and genuine parts, from the failure to develop and produce products in line with demand and regulations as well as from quality problems. Risks relating to the diesel issue still remain for the Volkswagen Group which, when aggregated, are among the most significant risks. Taking into account all the information known to us at present, no risks exist which could pose a threat to the continued existence of significant Group companies or the Volkswagen Group.

This annual report contains forward-looking statements on the business development of the Volkswagen Group. These statements are based on assumptions relating to the development of the economic and legal environment in individual countries and economic regions, and in particular for the automotive industry, which we have made on the basis of the information available to us and which we consider to be realistic at the time of going to press. The estimates given entail a degree of risk, and actual developments may differ from those forecast. Any changes in significant parameters relating to our key sales markets, or any significant shifts in exchange rates relevant to the Volkswagen Group, will have a corresponding effect on the development of our business. In addition, there may be departures from our expected business development if the assessments of the factors influencing sustainable value enhancement, as well as risks and opportunities, presented in this annual report develop in a way other than we are currently expecting, or if additional risks and opportunities or other factors emerge that affect the development of our business.
Prospects for 2019

The Volkswagen Group’s Board of Management expects the growth of the global economy to slow somewhat in 2019. We still believe that risks will continue to arise from protectionist tendencies, turbulence in the financial markets and structural deficits in individual countries. In addition, growth prospects will be negatively impacted by continuing geopolitical tensions and conflicts. We therefore expect both the advanced economies and the emerging markets to show weaker momentum than in 2018. We anticipate the strongest rates of expansion in Asia’s emerging economies.

We expect trends in the passenger car markets in the individual regions to be mixed in 2019. Overall, global demand for new vehicles will probably be at the prior-year level. We anticipate that the volume of new registrations for passenger cars in Western Europe will be in line with the figure seen in the reporting period. After a positive performance overall in recent years, we estimate that demand in the German passenger car market will fall slightly year-on-year. Sales of passenger cars in 2019 are expected to slightly exceed the prior-year figures in markets in Central and Eastern Europe. The volume of demand in the markets for passenger cars and light commercial vehicles (up to 6.35 tonnes) in North America is likely to be slightly lower than in the prior year. We expect new registrations in the South American markets for passenger cars and light commercial vehicles to grow moderately overall compared with the previous year. The passenger car markets in the Asia-Pacific region are expected at the prior-year level.

Trends in the markets for light commercial vehicles in the individual regions will be mixed again in 2019; on the whole, we anticipate a slight dip in demand.

In the markets for mid-sized and heavy trucks that are relevant for the Volkswagen Group and in the relevant markets for buses, new registrations in 2019 are expected to slightly exceed the prior-year level.

We believe that automotive financial services will continue to be very important for vehicle sales worldwide in 2019.

The Volkswagen Group is well prepared overall for the future challenges pertaining to the automobility business and the mixed developments in regional vehicle markets. Our brand diversity, our presence in all major world markets, our broad, selectively expanded product range and pioneering technologies and services put us in a good competitive position worldwide. As part of the transformation of our core business, we are positioning our Group brands with a stronger focus on their individual characteristics and optimizing the vehicle and drive portfolio. The focus hereby is primarily on our vehicle fleet’s carbon footprint and on the most attractive and fastest-growing market segments. In addition, we are working to make even more focused use of the advantages of our multibrand group by continuously developing new technologies and our toolkits.

We expect that deliveries to customers of the Volkswagen Group in 2019 will slightly exceed the prior-year figure amid continuously challenging market conditions.

Challenges will arise particularly from the economic situation, the increasing intensity of competition, exchange rate volatility and more stringent WLTP (Worldwide Harmonized Light-Duty Vehicles Test Procedure) requirements.

We expect the sales revenues of the Volkswagen Group and its Passenger Cars and Commercial Vehicles business areas to grow by as much as 5% year-on-year. In terms of the operating profit for the Group and the Passenger Cars Business Area, we forecast an operating return on sales in the range of 6.5–7.5% in 2019. For the Commercial Vehicles Business Area, we anticipate an operating return on sales of between 6.0% and 7.0%. In the Power Engineering Business Area, we expect a loss around the previous year’s level amid a slight rise in sales revenue. For the Financial Services Division, we are forecasting a moderate increase in sales revenues and an operating profit at the prior-year level.

Wolfsburg, February 22, 2019
The Board of Management
